

VIT[®]
Vellore Institute of Technology
(Deemed to be University under section 3 of UGC Act, 1956)

SCHOOL OF CIVIL ENGINEERING

M. Tech. Construction Technology and Management

(M.Tech. MCT)

Curriculum

(2023-2024 admitted students)

VISION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

Transforming life through excellence in education and research.

MISSION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

World class Education: Excellence in education, grounded in ethics and critical thinking, for improvement of life.

Cutting edge Research: An innovation ecosystem to extend knowledge and solve critical problems.

Impactful People: Happy, accountable, caring and effective workforce and students.

Rewarding Co-creations: Active collaboration with national & international industries & universities for productivity and economic development.

Service to Society: Service to the region and world through knowledge and compassion.

VISION STATEMENT OF THE SCHOOL OF CIVIL ENGINEERING

- To be internationally recognized for ground-breaking contributions, exceptional leadership, strong commitment to creative problem-solving and professional integrity.

MISSION STATEMENT OF THE SCHOOL OF CIVIL ENGINEERING

- To Pioneer the emerging technology in Civil Engineering.
- To address the complex societal scale challenges in areas of resilient infrastructure, smart and sustainable cities, water and energy security, climate change, mobility of goods and people, and environmental protection.
- To inspire and nurture innovative leaders and entrepreneurs.

M. Tech. Construction Technology and Management

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

1. Graduates will be engineering practitioners and leaders, who would help solve industry's technological problems.
2. Graduates will be engineering professionals, innovators or entrepreneurs engaged in technology development, technology deployment, or engineering system implementation in industry.
3. Graduates will function in their profession with social awareness and responsibility.
4. Graduates will interact with their peers in other disciplines in industry and society and contribute to the economic growth of the country.
5. Graduates will be successful in pursuing higher studies in engineering or management.
6. Graduates will pursue career paths in teaching or research.

M. Tech. Construction Technology and Management

PROGRAMME OUTCOMES (POs)

On completion of M. Tech. (Construction Technology and Management) programme, graduates will be able to

PO_01: An ability to independently carry out research /investigation and development work to solve practical problems.

PO_02: An ability to write and present a substantial technical report/document.

PO_03: Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.

M. Tech. Construction Technology and Management

PROGRAMME SPECIFIC OUTCOMES (PSOs)

On completion of M. Tech. (Construction Technology and Management) programme, graduates will be able to

PSO_01: Acquire knowledge of construction materials, construction management, project management, contract legal requirement and management of funds.

PSO_02: Innovate in technology development, engineering system implementation and interact with their peers in other disciplines in industry and society.

PSO_03: Independently carry out research / investigation to solve practical problems and write / present a substantial technical report/document

M. Tech. Construction Technology and Management

CREDIT STRUCTURE

Programme Credit Structure	Credits
Discipline Core Courses	24
Skill Enchantment Courses	05
Discipline Elective Courses	12
Open Elective Courses	03
Project/ Internship	26
Total Graded Credit Requirement	70

M. Tech. Construction Technology and Management

DETAILED CURRICULUM

Discipline Core Courses

24

S. No.	Course Code	Course Title	L	T	P	C
1.	MMAT501L	Advanced Statistical Methods	2	0	0	2
2.	MMAT501P	Advanced Statistical Methods Laboratory	0	0	2	1
3.	MCTM501L	Construction Practices and Equipment	2	0	0	2
4.	MCTM502L	Modern Construction Materials	2	0	0	2
5.	MCTM503L	Construction Planning and Scheduling	2	2	0	4
6.	MCTM504L	Quality Control and Safety	2	1	0	3
7.	MCTM505L	Contract and Administration Planning	3	0	0	3
8.	MCTM506L	Construction Economics and Finance	3	1	0	4
9.	MCTM507L	Computer Application in Infrastructure Management	1	1	0	2
10.	MCTM507P	Computer Application in Infrastructure Management Laboratory	0	0	2	1

Skill Enhancement Courses

05

S. No.	Course Code	Course Title	L	T	P	C
1.	MENG501P	Technical Report Writing	0	0	4	2
2.	MSTS501P	Qualitative Skills Practice	0	0	3	1.5
3.	MSTS502P	Quantitative Skills practice	0	0	3	1.5

Discipline Elective courses

12

S. No.	Course Code	Course Title	L	T	P	C
1.	MSTE610L	Repair and Rehabilitation of Structures	3	0	0	3
2.	MCTM601L	Construction Personnel Management	3	0	0	3
3.	MCTM602L	Project Formulation and Appraisal	3	0	0	3
4.	MCTM603L	Estimating, Tendering and Bidding	3	0	0	3
5.	MCTM604L	Prefabricated Techniques and Management	3	0	0	3
6.	MCTM605L	Green Building and Energy Management	3	0	0	3
7.	MCTM606L	Automation in Construction Industry	3	0	0	3
8.	MCTM607L	Construction Techniques of Deep Foundations	3	0	0	3
9.	MCTM608L	Supply Chain Management	2	1	0	3
10.	MCTM609L	Flexible and Rigid Pavements	3	0	0	3
11.	MCTM610L	Environmental Impact Assessment	3	0	0	3

Open Elective Courses

03

Engineering Discipline / Social Sciences

Project and Internship

26

S. No.	Course Code	Course Title	L	T	P	C
1.	MCTM696J	Study Oriented Project				2
2.	MCTM697J	Design Project				2
3.	MCTM698J	Internship I / Dissertation I				10
4.	MCTM699J	Internship II / Dissertation II				12

Discipline Core Courses

MMAT501L	ADVANCED STATISTICAL METHODS	L	T	P	C
		2	0	0	2
Pre-requisite	Nil	Syllabus Version			
Course Objectives					
<ol style="list-style-type: none"> To provide students with a framework that will help them choose the appropriate descriptive statistics in various data analysis situations. To analyse distributions and relationships of real-time data. To apply estimation and testing methods to make inference and modelling techniques for decision making using various techniques including multivariate analysis. 					
Expected Course Outcome					
<p>At the end of the course the students are expected to</p> <ol style="list-style-type: none"> Understand the concept of correlation and regression model and able to interpret the effect of variables, regression coefficients, coefficient of determination. Make appropriate decisions using inferential statistical tools that are central to experimental research. Understand the statistical forecasting methods and model fitting by graphical interpretation of time series data. Construct standard experimental designs and describe what statistical models can be estimated using the data. Demonstrate R programming for statistical data 					
Module: 1	Basic Statistical Tools for Analysis:	4 hours			
Summary Statistics, Correlation and Regression, Concept of R^2 and Adjusted R^2 and Partial and Multiple Correlation, Fitting of simple and Multiple Linear regression, Explanation and Assumptions of Regression Diagnostics					
Module: 2	Statistical inference :	9 hours			
Basic Concepts, Normal distribution-Area properties, Steps in tests of significance –large sample tests-Z tests for Means and Proportions, Small sample tests –t-test for Means, F test for Equality of Variances, Chi-square test for independence of Attributes.					
Module: 3	Modelling and Forecasting Methods:	9 hours			
Introduction: Concept of Linear and Non Liner Forecasting model ,Concepts of Trend, Exponential Smoothing, Linear and Compound Growth model, Fitting of Logistic curve and their Applications, Moving Averages, Forecasting accuracy tests. Probability models for time series: Concepts of AR, ARMA and ARIMA models.					
Module: 4	Design of Experiments:	6 hours			
Analysis of variance – one and two way classifications – Principle of design of experiments, CRD – RBD – LSD, Concepts of 2^2 and 2^3 factorial experiments.					

Module: 5	Contemporary Issues:	2 hours
Industry Expert Lecture		
Total Lecture hours		30 hours
Text Book(s)		
1.	Applied Statistics and Probability for Engineers, Douglas C. Montgomery George C. Runger, 6 th edition, John Wiley & Sons (2016),	
2	Time Series Analysis and Its Applications With R Examples, Shumway, Robert H., Stoffer, David S., 4 th edition, Springer publications (2017)	
Reference Books		
1.	The Elements of Statistical Learning: Data Mining, Inference, and Prediction, Trevor Hastie and Robert Tibshirani, 2 nd Edition, Springer Series, (2017)	
2	Introduction to Probability and Statistics: Principles and Applications for Engineering and the Computing Sciences, J. Susan Milton and Jesse Arnold, McGraw Hill education (2017)	
Mode of Evaluation: Digital Assignments, Quiz, Continuous Assessments, Final Assessment Test		
Mode of Evaluation		
Weekly Assessments, Final Assessment Test		
Recommended by Board of Studies	05.07.2022	
Approved by Academic Council		Date

MMAT501P	ADVANCED STATISTICAL METHODS LABORATORY	L	T	P	C
		0	0	2	1
Pre-requisite	Nil	Syllabus Version			
Course Objectives					
<ol style="list-style-type: none"> To provide students with a framework that will help them choose the appropriate descriptive statistics in various data analysis situations. To analyse distributions and relationships of real-time data. To apply estimation and testing methods to make inference and modelling techniques for decision making using various techniques including multivariate analysis. 					
Expected Course Outcome					
<p>At the end of the course the students are expected to</p> <ol style="list-style-type: none"> [1] Understand the concept of correlation and regression model and able to interpret the effect of variables, regression coefficients, coefficient of determination. [2] Make appropriate decisions using inferential statistical tools that are central to experimental research. [3] Understand the statistical forecasting methods and model fitting by graphical interpretation of time series data. [4] Construct standard experimental designs and describe what statistical models can be estimated using the data. [5] Demonstrate R programming for statistical data 					
List of Challenging Experiments (Indicative)					
1.	Computing Summary Statistics using real time data	3 hours			
2	Plotting and visualizing data using Tabulation and Graphical Representations.	3 hours			
3	Applying simple linear and multiple linear regression models to real dataset; computing and interpreting the coefficient of determination for scale data.	3 hours			
4.	Testing of hypothesis for Large sample tests for real-time problems.	2 hours			
5.	Testing of hypothesis for Small sample tests for One and Two Sample mean and paired comparison (Pre-test and Post-test)	2 hours			
6.	Testing of hypothesis for Small Sample tests for F-test	2 hours			
7	Testing of hypothesis for Small Sample tests for Chi-square test	2 hours			
8	Applying Time series analysis-Trends. Growth ,Logistic, Exponential models	2 hours			
9	Applying Time series model AR, ARMA and ARIMA and testing Forecasting accuracy tests.	3 hours			
10	Performing ANOVA (one-way and two-way), CRD, RBD and LSD for real dataset.	3 hours			
11	Performing 2^2 factorial experiments with real time Applications	2 hours			

12	Performing 2^3 factorial experiments with real time Applications	3 hours
Total Laboratory Hours		30 hours
Text Book(s)		
1.	Applied Statistics and Probability for Engineers, Douglas C. Montgomery George C. Runger, 6 th edition, John Wiley & Sons (2016),

MCTM501L	CONSTRUCTION PRACTICES AND EQUIPMENT	L	T	P	C
		2	0	0	2
Pre-requisite	NIL	Syllabus version			
Course Objectives:					
<ol style="list-style-type: none"> To understand the various techniques to be implemented in substructure construction To know the launching of girders, material handling and erection of components in super structure construction. To study the various types of roads; its construction procedure and equipment employed in road construction. To attain the knowledge in harbour, dam, river work and pipeline construction. To know the various types of equipment and its usage in different types of constructions. To obtain the knowledge of equipment management, cost control in construction. 					
Expected Course Outcome:					
<p>At the end of the course, the student will be able to</p> <ol style="list-style-type: none"> Identify the suitable techniques to construct the structure based on site condition Prepare the work schedule for any type of super structure construction. Identify the techniques to implement in construction of Embankment, Retaining wall, breast wall in hill road. Identify the suitable method and equipment to construct a Road, Dams, Harbour, River work and pipelines. Prepare a suitable plan for erection of new plants like Batching and mixing plant, Ready mix concrete plant at site. Manage and maintain the equipment and its cost control. 					
Module: 1	Sub Structure Construction				4 hours
Techniques of Box jacking – Pipe Jacking -under water construction of diaphragm walls and basement-Tunneling techniques – Piling techniques -Dewatering and stand by Plant equipment for underground open excavation.					
Module: 2	Superstructure Construction				4 hours
Launching girders, bridge decks, offshore platforms – Material handling - erecting lightweight components on tall structures - Erection of articulated structures - Fabrication and erection of steel trusses and frames.					
Module: 3	Highway Construction Practice				4 hours
Embankment Construction - Ground improvement techniques, Retaining and Breast walls on hill road. Bituminous Constructions- Concrete road construction: Test - Construction equipments - Method of construction of joints in concrete pavements - IRC specifications.					
Module: 4	Dams and Harbour Construction Practice				4 hours
Construction Methods and Equipment for Dams, Harbours, River works and Pipelines.					

Module: 5	Earthwork Equipment	4 hours
Fundamentals of Earthwork Operations - Earth Moving operations-Types of Earthwork Equipment - Tractors, Motor Graders, Scrapers, Front end Loaders, Earth Movers – capacity calculations.		
Module: 6	Forklifts and Screening Equipment	4 hours
Forklifts and related equipment - Portable Material Bins - Conveyors - equipment used in demolition – Chain Pulley Blocks. Crushers – Feeders - Screening Equipment - Batching and Mixing Equipment – Hauling equipment - Pouring and Pumping Equipment – Ready mixed concrete carriers		
Module: 7	Equipment Management	4 hours
Factors affecting selection of equipment and methods –Planning - Equipment Management in Projects - Maintenance Management – Replacement - Cost Control of Equipment – Depreciation Analysis, Methods of calculation of depreciation- Safety Management.		
Module: 8	Contemporary Issues	2 hours
Total Lecture hours		30 hours
Text Book(s)		
1.	Punmia B. C., Ashok Kumar Jain, Arun Kumar Jain, (2017), Building Construction, 11 th Edition, Lakshmi Publications, New Delhi.	
2.	Robert L. Peurifoy, Clifford J. Schexnayder, AviadShapira (2010), Construction Planning, Equipment and Methods, Indian Edition,Mc-Graw Hill-Education, New Delhi .	
References		
1.	Kumar NeerajJha, (2015), Construction Project Management, 2nd Edition, Pearson, New Delhi.	
2.	Varghese P.C., (2012), Foundation Engineering, PHI Learning Private Limited, New Delhi.	
Mode of Evaluation : Continuous Assessment Test, Quizzes, Assignment, Final Assessment Test

Approved by Academic Council		Date

MCTM502L	MODERN CONSTRUCTION MATERIALS	L	T	P	C
		2	0	0	2
Pre-requisite	NIL	Syllabus version			
Course Objectives:					
<ol style="list-style-type: none"> 1. To understand the applications and properties of various building materials 2. To know the various types of metals and alloys 3. To understand the potential applications of architectural materials 4. To obtain the knowledge about polymer materials and smart materials 5. To know the various chemical admixtures and special concrete 					
Expected Course Outcome:					
At the end of the course, the student will be able to					
<ol style="list-style-type: none"> 1. Compare the properties of most common and advanced building materials 2. Explain the role of metals and alloys in construction industry 3. Identify the required architectural materials for various buildings 4. Explain the role of polymers in construction industry 5. Outline various smart materials suitable for structures 6. Describe various properties and applications of chemical and mineral admixtures 7. Explain the properties and applications of special concrete 					
Module: 1	Building Materials	4 hours			
Cement- types - properties and testing – Aggregate – types - properties and Testing, Reinforcement – Types - Manufacturing Process - Properties – Types of Coatings & Coatings to reinforcement.					
Module: 2	Metals	4 hours			
Metals and Special Alloys of Steel - Water Jet Cut Stainless Steel, Mill Slab Steel, Tension Rods Assemblies and Cast Iron - Heat Treatment – Tendons - GI sheets, tubes and lightweight roofing materials - Aluminium and its products					
Module: 3	Architectural Materials	4 hours			
Wood and Wood Product – Glass - Floor Finishes – Paints – Tiles - Thermal insulation and acoustic absorption materials - decorative panels and laminates - architectural glass and ceramics - ferroement.					
Module: 4	Polymers	4 hours			
Polymers- Structural Plastics and Composites- Polymer Membranes- Coatings-Adhesives, Non-Weathering Materials-Flooring and Facade Materials- Glazed Brick - Photo Catalytic Cement - Acid Etched Copper and Composite Fibres					
Module: 5	Smart Materials	4 hours			
Neoprene, Bridge pads, thermocole, Smart and Intelligent Materials – Special features –Case studies showing the applications of smart and Intelligent Materials. Petroleum products, Fibre Reinforced Polymers, Bituminous Materials					

Module: 6	Chemical and Mineral Admixtures	4 hours
Types and properties of Chemical Admixtures - Water Proofing Compounds– sealants, engineering grouts, various types of finishes & treatments , Fly ash – silica fume – GGBFS - metakaolin - rice husk ash - properties and its application in concrete under special environment.		
Module: 7	Special Concrete	4 hours
Self-Compacting Concrete – Lightweight concrete – Self dynamic concrete – Self Healing Concrete – Nanotube concrete – High density concrete – High Performance Concrete – Ready mix Concrete – Geopolymer Concrete.		
Module: 8	Contemporary issues	2 hours
Industrial Expert Lecture		
Total Lecture hours		30 hours
Text Book(s)		
1.	Kumar Mehta P. and Paulo J. M. Monteiro, (2014), Concrete: Microstructure, Properties and Materials, 4th Edition, McGraw-Hill, New Delhi.	
References

MCTM503L	CONSTRUCTION PLANNING AND SCHEDULING	L	T	P	C
		2	2	0	4
Pre-requisite	NIL	Syllabus version			
Course Objectives:					
<ol style="list-style-type: none"> 1. To understand the importance of construction planning and organizational cultures and their impact on a project. 2. To know the relationship between strategic plans and projects and also understand the types of project risks in an organization. 3. To understand the importance of a complete and accurate WBS from a planning and executing point of view. 4. To compute critical path, slack and floats for a given network diagram. 5. To obtain the knowledge of advanced scheduling techniques and to be familiar with computerized scheduling both its limitations and advantages. 6. To prepare resource scheduling such as material, equipment and manpower requirements to execute the project. 7. To work out the costs associated with different construction projects. 					
Expected Course Outcome:					
At the end of the course, the student will be able to					
<ol style="list-style-type: none"> 1. Understand the importance of construction planning and organizational cultures. 2. Discuss the relationship between strategic planning and project planning. 3. Construct WBS and compute critical path, slack and floats for a given network diagram. 4. Describe the advanced scheduling techniques 5. Prepare various types of Project Information using Database Management Systems. 6. Create scheduling for material, equipment and manpower requirements to execute the project. 7. Estimate costs associated with different construction projects. 					
Module: 1	Planning	4 hours			
Construction Planning - Organizing, Staffing, directing, and controlling – Factors influence supply and demand of human resources – Role of HR manager – Personnel Principles -case studies					
Module: 2	Organizing	4 hours			
Requirement of Organization – Organization structure – Organization charts – Staffing Plan - Development and Operation of human resources					
Module: 3	Scheduling Techniques	4 hours			
Work Breakdown Structure (WBS) -Time Management and Scheduling -Bar chart and Gantt chart - Network methods - Network diagram - Critical Path Method -Calculation critical path , Floats/slacks - PERT – Three time estimates					
Module: 4	Resource Techniques	4 hours			
Precedence Diagram Method (PDM), Project monitoring - Updating - Target Schedule, Optimum cost and time, Scheduling with uncertain durations-Calculations for Monte Carlo Schedule Simulations- Crashing and Time-Cost Tradeoff					

Module: 5	Project Information	4 hours
Types of Project Information - Accuracy and Use of Information -Computerized Organization and Use of Information - Other Conceptual Models of Databases - Centralized - Database Management Systems - Databases and Applications Programs –Information - Transfer and Flow.		
Module: 6	Labour and Material Utilization	4 hours
Labour requirements, labour productivity, Equipment, Material Management, Inventory Control, Economic order quantity, EOQ for resource limitation, Resource scheduling - leveling and allocation.		
Module: 7	Cost Estimation	4 hours
Costs Associated with Constructed Facilities - Construction Cost Estimates - Historical Cost Data - Cost Indices - Applications of Cost Indices to Estimating - Estimate based on Engineer's List of Quantities - Estimation of Operating Costs.		
Module: 8	Contemporary Issues	2 hours
Total Lecture hours		30 hours
Total Tutorial hours		30 hours
Text Book(s)		
1.	Prasanna Chandra, (2017), Project Planning, Analysis, Selection, Implementation and Review, 8 th Edition, McGraw-Hill, New Delhi.

MCTM504L	QUALITY CONTROL AND SAFETY	L	T	P	C
		2	1	0	3
Pre-requisite	NIL	Syllabus version			
Course Objectives:					
<ol style="list-style-type: none"> To study the concepts of quality assurance and control techniques in construction. To understand the techniques and concepts of Statistical Quality Control Methods To familiarize with clauses for quality management in construction Industry To study the various construction accidents and cost of construction injuries To get knowledge about the various laws related to safety in construction industry To study and understand the various safety concepts and requirements applied to construction industry. 					
Expected Course Outcome:					
At the end of the course, the student will be able to					
<ol style="list-style-type: none"> Explain the importance of quality and quality management methods in construction. Construct the appropriate quality control charts and discuss the role of such charts in monitoring a process. Develop an appropriate quality assurance plan to assess the ability of the service to meet its required national and international quality standards. Apply the concepts of quality assurance and control techniques in construction. Identify the causes, investigations and prevention of accidents in the construction jobsite. Discuss about the various laws related to construction safety and worker's compensation insurance premium. Create the awareness about the role of safety in all the levels of management. 					
Module: 1	Construction Quality	4 hours			
Introduction to quality - Importance - Types – Inspection - Control and enforcement-Quality Management Systems - Responsibilities and authorities in Quality assurance -Architects, Engineers, Contractors and Consultants.					
Module: 2	Quality Standards and Statistical Methods	4 hours			
Planning and control of quality - Tools and techniques for quality management - Inspection of materials and machinery - Quality audits-Statistical quality control - Tools ,Control charts - Acceptance sampling, Specification and tolerances.					
Module: 3	Quality Management	4 hours			
Quality policy - Objectives and methods -Consumer satisfaction-Ergonomics-Time of Completion-Taguchi's concept of quality- Quality standards/codes in design and construction (ISO: 9000) - Quality System Documents – Quality related training – Implementing a Quality system – Third party Certification.					
Module: 4	Quality Assurance and Control	4 hours			
Objectives-Regularity agent-Owner, Design, Contract and Construction Oriented Objectives, Methods-Techniques and Needs Of QA/QC-Different Aspects of Quality-Appraisals, Factors Influencing Construction Quality-Critical, Major Failure Aspects and Analysis.					

Module: 5	Construction Accidents	4 hours
Injury and Accidents- Causes, Investigations and Prevention of Accidents, Hazards – Types , Nature, Causes and Control Measures - Identifications and Control Techniques - Cost of Construction Injuries-Legal Implications - Site management with regard to safety –Safety training and implementation - Construction safety and health manual.		
Module: 6	Safety Policy	4 hours
Need- Safety provisions -Factory Act-Laws related to the Industrial Safety-Measurement of Safety Performance, Safety Audit, Problem Areas in Construction Safety-Elements of an Effective Safety Programme-Job site Safety assessment- Safety Meetings-Safety Incentives		
Module: 7	Safety Organization	4 hours
Safety Policy, Safety Record Keeping, Safety Culture-Safe Workers-Safety and First Line Supervisors- Middle Managers-Top Management Practices, Company Activities and Safety-Sub contractual obligation, Project Coordination and Safety Procedures		
Module: 8	Contemporary Issues	2 hours
Total Lecture hours		30 hours
Total Tutorial hours		15 hours
Text Book(s)		
1.	Brian Thorpe and Peter Sumner(2016), Quality Assurance in Construction, Routledge	
2.	Steven Mccabe, (2016), Quality Improvement Techniques in Construction: Principles and Methods, Routledge

Approved by Academic Council		Date

MCTM505L	CONTRACT AND ADMINISTRATION PLANNING	L	T	P	C
		3	0	0	3
Pre-requisite	NIL	Syllabus version			
Course Objectives:					
<ol style="list-style-type: none"> 1. To make students who take this course be able to design sound contracts by training to interpret legal provisions and effectively administer and fulfill the requirements of a contract 2. To be able to effectively administer contract and identify tools available for contract preparation and administration 3. To identify good practice important stages of contract and wordings in contract 4. Understand jurisprudence to effectively administer contracts and a construction organization 5. To interpret the laws like Labour Laws, Tax laws and requirements and guidelines of other national and international legal regulatory bodies 					
Expected Course Outcome:					
At the end of the course, the student will be able to					
<ol style="list-style-type: none"> 1. Explain the various types of construction contracts and their legal aspects. 2. Appreciate the merits and demerits of a contract form and choose the most appropriate form ensuring sufficient safeguards are agreed upon to protect the interest of the party represented from Torts, LD etc. 3. Identify and develop the stages of a tender; decide the work flow and be able to define requirements of each relevant stage 4. Prevent failure of a contract; Understand legal recourse when a contract fails irreconcilably 5. Relate legal aspects of a contract 6. Gain knowledge in tax laws 7. Understand and apply labour regulations to construction industry 8. Be aware of practice of industry in executing contracts and 					
Module: 1	Introduction	6 hours			
Definition of Contract Legal issues in contract – Standard forms of contracts- General and special conditions of contracts- Contract pricing by the client, project management consultants and the contractor, Contract correspondence and contract closure.					
Module: 2	Construction Contracts	6 hours			
Types of contracts, Documents forming a contract, General conditions of Indian contracts - International contracts - Contract administration, Law of Torts - Interpretation of contract in case of inconsistency including case study.					
Module: 3	Tenders	9 hours			
Prequalification – Bidding – Accepting – Evaluation of Tender from Technical, Contractual and Commercial Points of View – Contract Formation and Interpretation – Potential Contractual Problems - World Bank Procedures and Guidelines – Tamilnadu Transparency in Tenders Act.					

Module: 4	Arbitration	5 hours
Comparison of Actions and Laws – Agreements –Appointment of Arbitrators – Conditions of Arbitration – Arbitration Tribunals - Powers and Duties of Arbitrator –Enforcement of Award – Arbitration and Conciliation Act 1996 - Arbitration case study.		
Module: 5	Legal Requirements	5 hours
Insurance and Bonding – Types of Bonds - Laws Governing Sale, Purchase and Use of Urban and Rural Land – Land Revenue Codes- Claims and disputes - Dispute resolution techniques.		
Module: 6	Tax Laws	6 hours
Income Tax, Sales Tax, Excise and Custom Duties and their Influence on Construction Costs – Legal Requirements for Planning – Property Law – Agency Law – Local Government Laws for Approval – Statutory Regulations		
Module: 7	Labour Regulations	6 hours
Social Security – Welfare Legislation – Laws relating to Wages, Bonus and Industrial Disputes – Workmen’s Compensation Act 1923 – Indian Factory Act 1948 – Tamil Nadu Factory Rules 1950 – Child Labour (Prohibition and Regulation) Act, 1986 - Other Labour Laws and Regulations.		
Module: 8	Contemporary Issues	2 hours
Total Lecture hours		45 hours
Text Book(s)

MCTM506L	CONSTRUCTION ECONOMICS AND FINANCE	L	T	P	C
		3	1	0	4
Pre-requisite	NIL	Syllabus version			
Course Objectives:					
<ol style="list-style-type: none"> 1. To understand the Economics in civil engineering 2. To understand concept of alternatives for decision making 3. To analyse financial returns 4. To evaluate the value added tax 5. To understand the concept financial management, construction costing and financial statement analysis 					
Expected Course Outcome:					
<p>At the end of the course, the student will be able to</p> <ol style="list-style-type: none"> 1. Understand the Economics in civil engineering 2. Understand concept of alternatives for decision making 3. Analyse financial returns 4. Evaluate the value added tax 5. Understand the concept financial management, construction costing and financial statement analysis 					
Module: 1	Economics	6 hours			
Role of Civil Engineering in Industrial Development - Support matters of Economy as related to Engineering- Market demand and supply - Quality control and Quality Production -Audit in economic law of returns, governing production.					
Module: 2	Equivalence Factors	9 hours			
Time value of money, Quantifying alternatives for decision making, Cash flow diagrams, Equivalency - Single payment in the future - Present payment compared to uniform series payments - Future payment compared to uniform series payments - Arithmetic gradient, Geometric gradient.					
Module: 3	Financial Returns Analysis	5 hours			
Comparison of alternatives: Present, future and annual worth method of comparing alternatives, Rate of return, Incremental rate of return, Break-even comparisons, Capitalized cost analysis, Benefit-cost analysis.					
Module: 4	Evaluating Alternative Investments	5 hours			
Real Estate - Investment Property, Equipment Replace Analysis, Depreciation – Tax before and after depreciation – Value Added Tax (VAT) – Inflation.					
Module: 5	Financial Management	6 hours			
Financial statements – Profit and loss, Balance sheets, Financial ratios, Working capital management, Inventory valuation, Mortgage Financing - International financial management-foreign currency management.					

Module: 6	Construction Costing	6 hours
Cost estimating: Types of Estimates, Approximate estimates – Unit estimate, Factor estimate, Cost indexes. Fixed contract Pricing- Cost plus pricing- Escalation clause- Construction cost control, Personnel costs, Equipment costs, Job in directs and markup.		
Module: 7	Financial Statement Analysis	6 hours
Balance sheet and Profit and Loss accounts – ratios analysis, Fund flow statement, Cash flow statement, Working Capital Management, Financial Control - Management accounting.		
Module: 8	Contemporary Issues	2 hours
Total Lecture hours		45 hours
Total Tutorial hours		15 hours
Text Book(s)

MCTM507L	COMPUTER APPLICATION IN INFRASTRUCTURE MANAGEMENT	L	T	P	C
		1	1	0	2
Pre-requisite	MCTM503L Construction Planning and Scheduling	Syllabus version			
Course Objectives:					
<ol style="list-style-type: none"> 1. To understand the management roles and recent developments to optimize solutions. 2. To know various computer applications in construction management. 3. To obtain the knowledge on modern technology in construction site and its management. 					
Expected Course Outcome:					
At the end of the course, the student will be able to					
<ol style="list-style-type: none"> 1. Connect digital tools to construction practice. 2. Apply techniques to optimize solutions. 3. Describe and model list of items of work and bill of quantities. 4. Relate technology through computer program in construction. 5. Design and construct industrial applications through automation. 6. Manage and apply linear project construction like roads. 7. Work on integrated solutions. 8. Produce models with optimized solutions in construction framework. 9. Create models with integrated automation techniques. 					
Module: 1	Introduction	2 hours			
Overview of IT Applications in Construction – Construction process – Computerization in Construction – Computer aided Cost Estimation – Developing application with database software.					
Module: 2	Optimization Techniques	2 hours			
Linear, Dynamic and Integer Programming - Branch and Bound Techniques – Application to Production Scheduling, Equipment Replacement, Material Transportation and Work Assignment Problems – Software applications					
Module: 3	Inventory Models	2 hours			
Deterministic and Probabilistic Inventory Models - Software applications.					
Module: 4	Computer Application	2 hours			
Advanced planning and scheduling concepts – Computer applications – Case study – Adoption 3D Printing in construction.					
Module: 5	Automation Techniques	2 hours			
Introduction – Automation techniques in Surveying, Design and Construction – Automation in Road, Tunnel and Bridge Construction.					
Module: 6	Application of software in Linear Project	2 hours			
Introduction – Project – WBS – Activity – Relationship - Scheduling – Constrains – Schedule data – Resources – Role – Optimizing Project Plan – Execution and Control – Performance					

Module: 7	Building Information Modeling	2 hours
Introduction – Parametric modeling – Visualisation – Completion of building modeling – 4D simulation using Navis works – Navigation and Clash detection.		
Module: 8	Contemporary issues	1 hour

Discipline Elective Courses

MCTM601L	REPAIR AND REHABILITATION OF STRUCTURES	L	T	P	C
		3	0	0	3
Pre-requisite	Nil	Syllabus version			
Course Objectives:					
<ol style="list-style-type: none"> To impart broad knowledge in the area of repair and rehabilitation of structures To understand about various causes of deterioration of structures To obtain the knowledge about corrosion of structures To understand the properties of repair materials To know various repair techniques and strengthening methods 					
Expected Course Outcome:					
Upon completion of this course, the student will be able to					
<ol style="list-style-type: none"> Explain the role of the maintenance engineer Describe the causes of deterioration of concrete, steel, masonry and timber structures Identify the effect of corrosion on structures Explain the NDT techniques to assess the condition of the structures Describe various properties and applications of repair materials Explain the techniques for repairing Discuss the Strengthening of distressed buildings 					
Module: 1	Introduction	5 hours			
Importance of maintenance - Types of maintenance - Decay of structures- Role of the Maintenance Engineer - Quality Assurance for concrete construction - Design and construction errors.					
Module: 2	Deterioration of Structures	6 hours			
Causes of deterioration of concrete, steel, masonry and timber structures - surface deterioration - efflorescence - Causes and preventive measures.					
Module: 3	Corrosion of Structures	6 hours			
Corrosion mechanism - Effects of cover thickness and cracking - Methods of corrosion protection – Inhibitors - Coatings - Cathodic protection for reinforcements.					
Module: 4	Inspection and Assessment of Distressed structures	6 hours			
Visual inspection – Non-destructive tests –Ultrasonic pulse velocity method – Rebound hammer technique– Pullout tests – Core test.					
Module: 5	Materials for Repair	6 hours			
Special concretes and mortar - Concrete chemicals - Special elements for accelerated strength gain - Expansive cement- Polymer concrete – Ferro cement, Fibre reinforced concrete - Fibre reinforced plastics.					

Module: 6	Techniques for Repair	6 hours
Techniques for repairing of spalling and disintegration of structures - Grouting –Autogenous healing- Pre-packed concrete- Protective surface coating.		
Module:7	Strengthening of distressed buildings	6 hours
Repairs to overcome low member strength – Deflection - Chemical disruption - Weathering wear - Fire leakage - Marine exposure- Use of FRP- NDT tests		
Module: 8	Contemporary issues	2 hours
Total Lecture hours		45 hours
Text Book(s)		
1.	Modi, P.I., Patel, C.N. (2016). Repair and Rehabilitation of Concrete Structures, PHI India, New Delhi.

MCTM601L	CONSTRUCTION PERSONNEL MANAGEMENT	L	T	P	C
		3	0	0	3
Pre-requisite	NIL	Syllabus version			
Course Objectives:					
<ol style="list-style-type: none"> 1. To understand the principles of project life cycle and legal and regulatory requirements 2. To be familiar with modern trends in the project management and project risks on organization 3. To know the elements of the HR function (e.g. – recruitment, selection, training and development, etc.) 4. To outline the nature and sources of conflict and explain the different strategies and approaches used in the resolution of conflict 5. To understand the awareness on fundamentals of human behaviour under varying stress conditions 6. To identify the laws related to labour welfare measures. 7. To study the appraisal and assessment methods to improve the productivity of human resources. 					
Expected Course Outcome:					
<p>Upon completion of this course, the student will be able to</p> <ol style="list-style-type: none"> 1. Explain the principles of project life cycle and role of project managers. 2. Discuss the modern trends in the project management and solve the project risks on organization. 3. Know about the human resources planning and policies through proper selection and training methods 4. Apply the different strategies and approaches used in the resolution of conflict 5. Analyze the Organizational Behaviour related to group dynamics and team working 6. Suggest labour welfare measures and the laws related to labour welfare measures. 7. Apply the principles and techniques of human resource management and solution to personnel issues of typical case problems. 					
Module: 1	The Owners Perspective	6 hours			
Introduction - Project Life Cycle - Types of Construction - Selection of Professional Services - Construction Contractors - Financing of Constructed Facilities - Legal and Regulatory Requirements - Changing Environment of the Construction Industry - Role of Project Managers.					
Module: 2	Project Management	5 hours			
Project Management – Modern trends - Effects of Project Risks on Organization - Organization of Project Participants -Traditional Designer-Constructor Sequence - Professional Construction Management - Owner-Builder Operation					
Module: 3	Human Resources	5 hours			
Staffing Plan - Development and Operation of human resources - Managerial Staffing – Recruitment – Selection strategies – Placement and Training.					
Module: 4	Human Relations	6 hours			
Basic individual psychology – Approaches to job design and job redesign – Self managing work teams – Intergroup – Conflict in organizations – Leadership-Engineer as Managerial aspects of decision making – Significance of human relation and organizational					
Module: 5	Organizational Behaviour	6 hours			
Individual in organization – Motivation – Personality and creativity – Group dynamics, Team working – Communication and negotiation skills.					

Module: 6	Welfare Measures	6 hours
Compensation-Wages and Salary, Employee Benefits– Safety and health – General Provident Fund – Employees Provident Fund – Group Insurance – Housing - Pension – Laws related to welfare measures.		
Module: 7	Management and Development Methods	9 hours
Employee appraisal and assessment- Employee services- Safety and Health-Discipline and Discharge-Special human resource problems, Performance appraisal-Employee Hand Book And Personnel Manual-Job descriptions and organization structure and Human relations-Productivity of Human resources.		
Module: 8	Contemporary Issues	2hours
Industry Expert Lecture		
Total Lecture hours		45 hours
Text Book(s)		
1.	Khanka S.S (2010), Organizational Behaviour, S Chand &Company, New Delhi.

MCTM602L	PROJECT FORMULATION AND APPRAISAL	L	T	P	C
		3	0	0	3
Pre-requisite	NIL	Syllabus version			
Course Objectives:					
<ol style="list-style-type: none"> 1. To make students taking this course be able to understand about the project formulation 2. To be able to work out the costing of construction projects 3. To understand the project be able to do the appraisal of Projects with the inherent risks 4. To find effective options for develop the finance model of Project through its life cycle 5. To identify areas where private sector participation can be motivated 					
Expected Course Outcome:					
At the end of the course, the student will be able to					
<ol style="list-style-type: none"> 1. Explain the aspects to be considered when evolving the project life cycle 2. Appreciate the various steps and FEED studies 3. Identify the factors that will impact the time value of money 4. Prevent losses in project because of smart identification of factors that affect operational expenses during formulation of the project 5. Relate various risks when appraisal of a project at various stages 6. Gain understanding of the various factors that affect the financing structure of a project and identify suitable financing models and financing agencies 7. Understand implication of various infrastructure development models 8. Be aware of practice of industry 					
Module: 1	Project Formulation	6 hours			
Capital investments - Generation and Screening of Project Ideas - Project identification- Project evaluation an overview, the project cycle, planning, project selection and appraisal, project quality factors and basic needs the measurement of project performance					
Module: 2	Project Initiation	5 hours			
Capital budgeting – feasibility study– market, technical, financial, economic and ecological – Market and Demand analysis- Detailed technical analysis					
Module: 3	Time Value of Money	6 hours			
Time Value of Money –Future value of single amount, Present value of single amount, Future value of an annuity, Present value of an annuity-Simple interest-Compound interest - project cash Flows.					
Module: 4	Project Costing	6 hours			
Investment Criteria- Discounting criteria-Net present value (NPV), Benefit cost ratio(BCR), internal rate of return(IRR)- Non-Discounting criteria - Pay Back Period, Accounting rate of return(ARR), Urgency - Investment analysis in practice.					
Module: 5	Project Appraisal	9 hours			
Investment Appraisal – International Practice of Appraisal – Analysis of Risk – Different Methods – Selection of a Project and Risk Analysis in Practice.					

Module: 6	Project Financing	5 hours
Project Financing – Means of Finance – Financial Institutions – Special Schemes – Key Financial Indicators – Ratios.		
Module: 7	Private Sector Participation	6 hours
Private sector participation in Infrastructure Development Projects - BOT, BOLT, BOOT - Scope of Technology Transfer - Technology Transfer and Foreign Collaboration - Case Study.		
Module: 8	Contemporary Issues	2 hours
Total Lecture hours		45 hours
Text Book(s)		
1.	Prasanna Chandra, (2014), Projects -Planning Analysis Selection Implementation & Review, Fourth Edition, Tata McGraw Hill Publishing Company Ltd., New Delhi.

MCTM603L	ESTIMATING, TENDERING AND BIDDING	L	T	P	C
		3	0	0	3
Pre-requisite	NIL	Syllabus version			
Course Objectives:					
<ol style="list-style-type: none"> 1. To understand the various types of estimates and process involved in sanction of budget for a project. 2. To study about analysis of rate and standard methods followed by different organizations. 3. To attain the knowledge about the specification and its importance in a project. 4. To know the about the tendering and its process in construction. 5. To attain the knowledge about contracts, types of contracts, contract documents and roles and functions of participants to the contract. 6. To obtain the knowledge about the conditions of contract, Bidding and Bidding models. 					
Expected Course Outcome:					
At the end of the course, the student will be able to					
<ol style="list-style-type: none"> 1. Prepare the project cost estimation and detailed estimate for getting approval of projects. 2. Find the rate for an item of work in a project by using a standard methods. 3. Prepare a detailed specification as per available drawing and detailing 4. Prepare a tender document for a budget sanctioned project. 5. Identify the suitable construction contract method and able to prepare the contract document. 6. Identify the suitable bidding models and also estimate the overhead charges in a project. 					
Module: 1	Estimation	5 hours			
Project cost estimation - Approximate Estimate and administrative approval - expenditure sanction - Detailed Estimate.					
Module: 2	Rate Analysis	5 hours			
Rate analysis - standard methods as followed by government organizations for tendering purposes - as followed by contractor organizations for bidding Purposes.					
Module: 3	Specifications	6 hours			
Definitions, relationship with drawings, purpose, benefits, organization of specification, drafting/writing the specifications, types of specifications.					
Module: 4	Tendering Process	9 hours			
Preparation of tender documents estimating, pre-qualification, bid evaluation, award of contract, project financing and contract payments, contracts close out and completion, E-tendering.					
Module: 5	Contract Agreement	6 hours			
Contracts, types of construction contracts, Evaluation of contract documents, need for documents, present stage of national and international contract documents, roles and functions of participants to the contract.					

Module: 6	Conditions of Contract	6 hours
Clarification by parties to contract, obligations and responsibilities of the parties, protection and indemnification, bonds and insurance, subsurface conditions, inspection of work, change of work, rejected work and deficiencies.		
Module: 7	Bidding	6 hours
Bidding models and bidding strategies, Owner's and contractor's estimate - Overhead charges - Internationally adopted formulae. Enlistment of contractors.		
Module: 8	Contemporary Issues	2 hours
Total Lecture hours		45 hours
Text Book(s)		
1.	Jimmie Hinze, (2013) , Construction Contracts, McGraw Hill, New Delhi	
Reference Books		
1.	Will Hughes, Ronan Champion, John Murdoch, (2015), Construction Contracts: Law and Management, Routledge.

MCTM604L	PREFABRICATED TECHNIQUES AND MANAGEMENT	L	T	P	C
		3	0	0	3
Pre-requisite	NIL	Syllabus version			
Course Objectives:					
<ol style="list-style-type: none"> To understand the design principles related to prefabrication elements. To obtain knowledge on the concepts of production, transportation, assembling & erection of precast buildings. 					
Expected Course Outcome:					
At the end of the course, the student will be able to					
<ol style="list-style-type: none"> Describe various structural systems and standard organizing requirements. Identify and differentiate structural behaviour of building elements. Design building elements and applications. Identify and describe working principles of various joints. Identify and describe working principles of various connections. Apply principles and describe assembling process. Identify and describe various tools in assembling and erection of buildings. Design and detail precast and activities by innovation. 					
Module: 1	Introduction	7 hours			
Types of prefabrication, prefabrication systems and structural schemes- Disuniting of structures- Structural behaviour of precast structures - Specific requirements for planning and layout of prefabrication plant - IS Code specifications.					
Module: 2	Precast Cast Elements	7 hours			
Handling and erection stresses- Application of prestressing of roof members; floor systems two way load bearing slabs, pre stressed beam , Precast column -precast shear walls Wall panels, hipped plate and shell structures.					
Module: 3	Prefabricated Design	7 hours			
Designing and detailing prefabricated units for 1) industrial structures 2) Multistory buildings and 3) Water tanks, silos bunkers etc., 4) Application of prestressed concrete in prefabrication.					
Module: 4	Joints	6 hours			
Basic mechanism- Dimensioning and detailing of joints for different structural connections; compression joint-shear joint - tension joint					
Module: 5	Connections	6 hours			
Pin jointed connection-moment resisting connections- beam to column- column foundation connections					
Module:6	Prefabricated Buildings	6 hours			
Production, Transportation & erection- Shuttering and mould design Dimensional tolerances- Erection of R.C. Structures, Total prefabricated buildings assembly Process					
Module:7	Machinery and Equipment	4 hours			
Plant machinery, casting yard- casting and stacking					

Module: 8	Contemporary issues	2 hours
Total Lecture hours		45 hours
Text Book(s)		
1.	KimS. Elliot (2017), Precast Concrete Structures, CRC Press	
Reference Books		
1.	Handbook of Precast Concrete Buildings (2016) ICI publications.	
2.	Ryan E. Smith, (2010), Prefab Architecture: A Guide to Modular Design and Construction, John Wiley and Sons, London.	
3.	Hubert Bachmann and Alfred Steinle, (2011), Precast Concrete Structures, Wiley VCH.

MCTM605L	GREEN BUILDING AND ENERGY MANAGEMENT	L	T	P	C
		3	0	0	3
Pre-requisite	NIL	Syllabus version			
Course Objectives:					
<ol style="list-style-type: none"> To study about the concepts of green building and low energy approaches. To get a thorough knowledge about Green building systems, auditing and energy management. Recognize and demonstrate methods for green project management, certification registration and documentation and green rating system compliance. 					
Expected Course Outcome:					
At the end of the course, the student will be able to					
<ol style="list-style-type: none"> Understand the concepts and factors influencing green building concepts, systems and energy management. Impact of indoor environmental quality on occupant well-being and comfort relevant to 21st century in India Identify and compare existing energy codes, green building codes and green rating systems. Study about the fundamentals of energy and energy production systems pertaining to Residential, Commercial, Institutional and Public Buildings. Able to conduct energy audit and apply conservation and maintenance measures Demonstrate the energy management of electrical equipment and appliances in buildings Use low embodied energy industrial and building materials and cost effective building technologies 					
Module: 1	Introduction	6 hours			
Green Composites for buildings - Concepts of Green Composites - Water Utilisation in Buildings, Low Energy Approaches to Water Management - Management of Solid Wastes , Sullage Water and Sewage - Urban Environment and Green Buildings - Green Cover and Built Environment.					
Module: 2	Green Building Systems	6 hours			
Comfort in Building, Thermal Comfort in Buildings- Issues, Heat Transfer Characteristic of Building Materials and construction techniques, Incidence of Solar Heat on Buildings-Implications of Geographical Location- Green management in India - relevance in twenty first century.					
Module: 3	Green Building Auditing	6 hours			
Environmental reporting and ISO 14001, Climate change business and ISO 14064 , Energy and resource conservation-Principles, Design of green buildings-rating systems-LEED Standards – Indian green building council rating system for various types of projects.					
Module: 4	Energy	9 hours			
Fundamentals of Energy - Energy production systems - Heating, Ventilating and Air conditioning - Solar Energy - Energy Economic Analysis - Energy Conservation and Audits - Domestic Energy Consumption - Savings - Primary Energy use in Buildings – Residential - Commercial - Institutional and Public Buildings.					

Module: 5	Energy Efficiency	6 hours
Energy in Building Design-Energy Efficient and Environmental Friendly Building- Climate, Sun and solar radiation-Psychometrics-Passive Heating and Cooling Systems- Energy Audit-Types - analysis of results-Energy flow diagram-Energy consumption/Unit production- Identification of wastage-Priority of conservative measures-Maintenance of Energy Management Programme		
Module: 6	Energy Management	5 hours
Energy Management of Electrical Equipment-Improvement of Power Factor-Management of Maximum Demand- Energy Savings in Pumps – Fans – Compressed Air Systems-Lighting Systems-Air Conditioning Systems –Operation and Maintenance- Modifications- Energy Recovery Dehumidifier-Water Heat Recovery-Steam Plants.		
Module: 7	Alternate Energy Resources	5 hours
Industrial and Buildings Wastes - Biomass Resources for buildings - Utility of Solar energy in buildings concepts - Low Energy Cooling - Case studies of Solar Passive Cooled and Heated Buildings - Building materials: sources, methods of production and environmental Implications. Embodied Energy in Building Materials. Cost Effective building technologies.		
Module: 8	Contemporary Issues	2 hours
Industrial Expert Lecture		
Total Lecture hours		45 hours
Text Book(s)		
1.	Osman Attmann, (2010), “Green Architecture Advanced Technologies and Materials”. McGraw Hill.

MCTM606L	AUTOMATION IN CONSTRUCTION INDUSTRY	L	T	P	C
		3	0	0	3
Pre-requisite	NIL	Syllabus version			
Course Objectives:					
<ol style="list-style-type: none"> 1. To get knowledge about application of automation and use of robots in construction. 2. To learn the basic concept of Sensors and inspection 3. To study the existing and prototype equipment for construction. 4. To study on Data networking, robotic technologies for prefabrication elements. 					
Expected Course Outcome:					
At the end of the course, the student will be able to					
<ol style="list-style-type: none"> 1. Understand the application of building management system and automation in on and off site projects. 2. Solve the construction issues through robotic techniques. 3. Application of computer in construction Information processing 4. Understand the concepts of Communication and office automation system 5. Application of Robotics in Construction 					
Module: 1	Introduction	6 hours			
Concept and application of Building Management System (BMS) and Automation, requirements and design considerations and its effect on functional efficiency of building automation system, architecture and components of BMS- Review and analysis of state-of-art in construction automation					
Module: 2	Sensors and inspection	6 hours			
Field sensors actuators, controllers, non-destructive evaluation, data acquisition , examples of sensors in existing automated equipment					
Module: 3	Off and On site automation in construction	6 hours			
Off- site automation in construction Information processing (computer applications), materials processing , case study (concrete batch plant) - Existing and prototype equipment for construction – case study (concrete placement and finishing), final product design session					
Module: 4	Building Automation	9 hours			
Introduction to building automation systems – components– Heating, ventilation, and air conditioning (HVAC)– Lighting – Electrical systems water supply and sanitary systems– Fire safety – security -Communication and office automation system -Water pump monitoring & control - Control of Computerized HVAC Systems					
Module: 5	Networking	6 hours			
Data networking– IBMS system and its components – Centralized control equipment’s – substation and field controllers – Gamma building control – energy-efficient building and room automation.					
Module: 6	Robotics in Construction	5 hours			
Automation and robotic technologies for customized component, module and building prefabrication- Elementary technologies and single – Task construction robots - Site automation-robotic on site factories.					

Module: 7	Construction Robots	5 hours
Selecting robot- Activated concrete cutting robot, concrete floor finishing robot- Ceiling panel positioning robot- Exterior wall painting robot-safety and training- case studies.		
Module: 8	Contemporary Issues	2 hours
Industrial Expert Lecture		
Total Lecture hours		45 hours
Text Book(s)

MCTM607L	CONSTRUCTION TECHNIQUES OF DEEP FOUNDATIONS	L	T	P	C
		3	0	0	3
Pre-requisite	Nil	Syllabus version			
Course Objectives:					
<ol style="list-style-type: none"> 1. To understand the various types of deep foundations. 2. To know the various methods and techniques involved in construction of deep foundations 3. To know the various equipment involved in construction of deep foundation. 4. To understand the management and safety requirements in construction of deep foundations 5. To know the concept of sheet piles, coffer dams and reinforced earth walls. 					
Expected Course Outcome:					
Upon completion of this course, the student will be able to:					
<ol style="list-style-type: none"> 1. Understand the various types of deep foundations. 2. Know the various methods and techniques involved in construction of deep foundations 3. Know the various equipment involved in construction of deep foundation. 4. Understand the management and safety requirements in construction of deep foundations. 5. The concept of sheet piles, coffer dams and reinforced earth walls. 					
Module: 1	Introduction to deep foundations	6 hours			
Introduction- Preliminary investigations, subsurface exploration, data interpretation and estimation of various sub-soil properties; Types of deep foundations; Requirements for deep foundations; Codal provisions on safety requirements for deep foundations.					
Module: 2	Bored piles	5 hours			
Classification of bored piles; Construction methods and construction sequences of bored piles; Equipment's used for boring, drilling and concreting; Piling supervision and quality assurance; Design considerations and pile capacity					
Module: 3	Drivenpiles	6 hours			
Classification of driven piles; Selection of type of piles and method of installation; Pile driving equipment's; Construction and quality assurance of driven piles; Advantages and disadvantages of driven piles; Pile damages and pile integrity test; Design considerations and pile capacity					
Module: 4	Well Foundations	5 hours			
Types of wells or caissons; Different shapes of well; Drilled shafts and caissons; Methods and construction sequences; Design procedure; Advantages and disadvantages of well foundation.					
Module: 5	Diaphragm wall	6 hours			
Deep excavations and protection systems; Applications of diaphragm wall; Diaphragm wall construction methods; Design procedure; Advantages and disadvantages.					

Module: 6	Sheet piles and Cofferdams	7 hours
Sheeting and bracing systems in shallow and deep open cuts in different soil types –Cantilever sheet piles, Anchored sheet piles; Construction methods and sequences; Design procedure; Merits and demerits. Types of Cofferdams; Cofferdams components and construction sequences; design procedure for cellular coffer dam; merits and demerits		
Module: 7	Reinforced Earth Walls	7 hours
Introduction; Advantages of RE walls;Behaviour of RE walls;Materials for reinforced earth structures; Soil-reinforcement interaction; Internal and external stability conditions; Design criteria; Field applications of RE walls.		
Module: 8	Contemporary issues	3 hours
Total Lecture hours		45 hours
Text Book(s)		
1.	Bowles, J. E., (2011), Foundation Analysis and Design, 7 th Edition, McGraw Hill Book Co., New York.	
2.	Das. B. M., (2010), Principles of Foundation Engineering, CL Engineering.	
Reference Books		
1.	Huang A.B., Yu H.S, (2018) Foundation Engineering Analysis and Design, CRC Press, Taylor & Francis group.	
2.	Fang. H.Y.,(2012), Foundation Engineering Handbook, Springer Science and Business Media.	
3.	Varghese. P. C., (2009), Design of Reinforced Concrete Foundations, Prentice Hall of India, New Delhi.	
4.	Murthy. V. N. S., (2009), Soil Mechanics and Foundation Engineering – CBS Publications, Delhi.	
5.	Tomlinson M and Woodward J. (2008). Pile Design and Construction Practice” 5 th Edition. Taylor and Francis.	
6.	K. R. Arora., (2011) Soil Mechanics and Foundation Engineering, Standard publishers	
7.	BIS 2911 (Part 1/Sec 1, Sec 2, Sec 3 and Sec 4) (2010) Design and construction of pile foundations-code of practice (Driven cast in-situ concrete piles), Bureau of Indian Standards, New Delhi.	
Mode of Evaluation: Continuous Assessment Test, Final Assessment Test, Quiz, Assignments

MCTM608L	SUPPLY CHAIN MANAGEMENT	L	T	P	C
		2	1	0	3
Pre-requisite	NIL	Syllabus version			
Course Objectives:					
<ol style="list-style-type: none"> 1. To know and Master the fundamental concepts associated with Supply Chain Management and align with vision of the organization from the perspective of built environment and infrastructure development 2. To analyse the decision chain process in a supply chain and evolve strategies to design effective supply chains based on recognized supply chain frameworks 3. To critically evaluate designs for techno-commercial feasibility focusing on sustainability and being sensitive to socio – cultural impacts 4. To build competence in management of vendors and sub-vendors to satisfy end requirements 5. To study market scenario too evolve pricing strategy and improve competitiveness of the business 6. To gain insight into E-Commerce and ERP2.0 concepts to increase efficiency of the supply chain 					
Expected Course Outcome:					
At the end of the course, the student will be able to					
<ol style="list-style-type: none"> 1. Connect recognized concepts of Supply Chain Management 2. Design Supply chain networks using recognized frameworks 3. Identify bottle necks in a supply chain. 4. Design cost effective and technical feasible Supply chains that are sustainable and is socially responsible 5. Calculate competitive prices for products delivered and add value to every aspect of the supply chain 6. Effectively be able to use ERP and other modern digital tools that industry uses 					
Module: 1	Introduction				4 hours
Supply chain stages and decision phases process view of a supply chain- Supply chain flows- Examples - Competitive and supply chain strategies -supply chain performance - Framework for structuring drivers - Obstacles to achieving fit - Case discussions.					
Module: 2	Designing				4 hours
Distribution Networking - Role, Design, Supply Chain Network - Role, Factors, Framework for Design Decisions - Models for facility location and capacity allocation -Discounted cash flow analysis - Evaluating network design -Decision trees.					
Module: 3	Sourcing				4 hours
Role of sourcing, supplier – scoring and assessment, selection and contracts, Design collaboration, Case Studies.					

Module: 4	Transportation	4 hours
Role of transportation - Factors affecting transportation decisions - Modes of transportation and their performance characteristics - Designing transportation network - Trade-off in transportation design. Routing and scheduling in transportation - International transportation - Analytical problems.		
Module: 5	Pricing	4 hours
Role Revenue Management in the supply chain, Revenue management for: Multiple customer segments, perishable assets, seasonal demand, bulk and spot contracts.		
Module: 6	Coordination and Technology	4 hours
Co-ordination in a supply chain: Bullwhip effect - Obstacles to coordination - Managerial levers to achieve co-ordination - Building strategic partnerships - Supply Chain IT framework - The role of E-business in a supply chain - The E-business framework - E-business in practice - Case discussion.		
Module: 7	Emerging Concepts	4 hours
Global Logistics -Reverse Logistics - Reasons, Activities, Role - Ware house Management- Components, applications, implementation - Lean supply Chains-Sustainable supply Chains		
Module: 8	Contemporary issues	2 hours
Total Lecture hours		30 hours
Tutorial hours		15 hours
Minimum of three problems to be worked out by students in every tutorial class.		
Text Book(s)

MCTM609L	FLEXIBLE AND RIGID PAVEMENTS	L	T	P	C
		3	0	0	3
Pre-requisite	NIL	Syllabus version			
Course Objectives:					
<ol style="list-style-type: none"> 1. To enable the student to identify the materials that suit pavement construction. 2. To enable the student to design flexible and rigid pavements. 3. To make the student familiar with the methods of constructing pavements. 4. To enable the student to measure pavement distresses and design overlays. 					
Expected Course Outcome:					
At the end of the course, the student will be able to					
<ol style="list-style-type: none"> 1. Evaluate the suitability of soil for being used as subgrade for pavements and propose methods to prepare a stable subgrade. 2. Choose the bitumen that is suitable for pavement in a particular site and design the flexible pavement mix. 3. Design a flexible pavement using IRC and Asphalt Institute methods. 4. Evaluate materials for their suitability in using for rigid pavements. 5. Design a rigid pavement using IRC method. 6. Describe methods of flexible and rigid pavement construction. 7. Identify and measure pavement distresses and design overlays. 					
Module: 1	Subgrade	9 hours			
Significance of subgrade soil – soil classification – evaluation of soil strength – CBR and plate load test – earth work grading – construction of embankments and cuttings – preparation of subgrade – quality control tests – subgrade stabilization					
Module: 2	Materials for Flexible Pavement	6 hours			
Bitumen – types and grades – properties and testing of materials used in granular layers and bituminous layers – Types of granular and bituminous mixes — mix design for granular materials – bituminous mix design - super pave concepts – new materials like polymer modified bitumen, geosynthetics etc.					
Module: 3	Design of Flexible Pavements	6 hours			
Principle, design steps, advantages and applications of different pavement design methods – Group Index, CBR, McLeod, Kansas triaxial test, IRC and Asphalt Institute methods					
Module: 4	Materials for Rigid Pavement	6 hours			
Cement – grades – chemical composition – hydration of cement – testing – admixtures – fibres - properties and testing of pavement quality concrete – mix design – acceptance criteria					
Module: 5	Design of Rigid Pavements	6 hours			
Stresses and deflections in rigid pavements – Westergaard’s analysis, Bradbury’s coefficients, IRC design charts – wheel load stress, warping stress, frictional stress and combination of stresses – types of joints – Design of slab and joints – IRC method of design					

Module: 6	Construction Procedures	5 hours
Methods of construction and field control checks for various types of flexible pavement layers – recycling of bituminous materials. Cement concrete pavements – methods of construction of various layers – joints-quality control tests		
Module: 7	Evaluation and Maintenance	5 hours
Distresses in flexible and rigid pavements – structural and surface condition evaluation techniques – maintenance strategies - pavement performance prediction concepts and models – design of overlays		
Module: 8	Contemporary Issues	2 hours
Total Lecture hours		45 hours

MCTM610L	ENVIRONMENTAL IMPACT ASSESSMENT	L	T	P	C
		3	0	0	3
Pre-requisite	NIL	Syllabus version			
Course Objectives:					
<ol style="list-style-type: none"> To understand the concepts of EIA and also emphasis the role of engineers in EIA and Environmental impact factors. To know the legislations to be used for enforcement of environmental acts and the role of public participation To discuss the methods to be used in EIA and legal systems related to environmental management systems (EMS) (EIA, Environmental Audit (EA), Life cycle Assessment (LCA)) for cleaner production and sustainable development. To know the impacts occurred to physical environment by the projects To know the impacts occurred to biological environment by the projects To know the impacts occurred to human resources by the projects To draft a EIA for specific projects and understanding the mitigation and monitoring methods To get exposed to practical experience for drafting a EIA through consultant/Government 					
Expected Course Outcome:					
Upon completion of this course the student shall be able to					
<ol style="list-style-type: none"> Explain the philosophy and art of environmental management systems Role of government in approving the projects and the laws to be enforced Apply the mechanism of EIA for Project Appraisal, Decision making and Implementation Suitable methods in handling the data collected during the EIA processes Possible impacts that could occur for physical, biological and human resources by the project A complete EIA report could be drafted Work as a professional member of a team conducting environmental assessments and auditing, and LCA To understand the difference between theory and practice for writing a EIA report 					
Module: 1	Environmental Impact Assessment (EIA)	6 hours			
EIA for Environmental Engineers–Environmental Impact Statement – Environmental Appraisal–Environmental Impact Factors.					
Module: 2	EIA Legislation	6 hours			
Criteria and Standards for Assessing Significant Impacts–Risk Assessment–Public Participation and Involvement.					
Module: 3	EIA Process and Methods	9 hours			
Criteria for the Selection of EIA Methodology–Screening–Scoping–Predictive Models for Impact Assessment–Mitigation, Monitoring, Auditing, Evaluation of Alternatives and Decision Making–Methods of Strategic Environmental Assessment. Environmental management plan.					

Module: 4	Prediction and Assessment of Impacts on Physical Environment	6 hours
Geology – Soils – Minerals – Climate – Water Resources – Water Quality – Air Quality – Noise.		
Module: 5	Prediction and Assessment of Impacts on Biological Environment	5 hours
Terrestrial Ecosystems – Wetland Ecosystems – Aquatic Ecosystems – Threatened and Endangered Species.		
Module: 6	Prediction and Assessment of Impacts on Human Resources	6 hours
Demographics – Economics – Land Use – Infrastructure – Archaeological and Historic – Visual – safety.		
Module: 7	EIA Case Studies	5 hours
Environmental Impact of Industrial Development – Management Requirements for the Preparation of EIA for industrial projects – Preparation of EIA of Land Clearing Projects – Assessment of Impacts of Traffic and Transportation – EMP		
Module: 8	Contemporary Issues	2 hours
Total Lecture hours		45 hours
Text Book(s)		
1.	Larry W. Canter, (1996), Environmental Impact Assessment, 2 nd Edition, McGraw-Hill,	
2.	Judith Petts (Ed.), (2009), Handbook of Environmental Impact Assessment- Volume 1 & 2' authored by, Blackwell Science.
