

VIT[®]

Vellore Institute of Technology
(Deemed to be University under section 3 of UGC Act, 1956)

School of Computer Science and Engineering

CURRICULUM AND SYLLABI

(2024-2025)

B. Tech. Computer Science and Engineering (Internet of Things)

VISION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

Transforming life through excellence in education and research.

MISSION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

World class Education: Excellence in education, grounded in ethics and critical thinking, for improvement of life.

Cutting edge Research: An innovation ecosystem to extend knowledge and solve critical problems.

Impactful People: Happy, accountable, caring and effective workforce and students.

Rewarding Co-creations: Active collaboration with national & international industries & universities for productivity and economic development.

Service to Society: Service to the region and world through knowledge and compassion.

VISION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

To be a world-renowned centre of education, research and service in computing and allied domains.

MISSION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

- To offer computing education programs with the goal that the students become technically competent and develop lifelong learning skill.
- To undertake path-breaking research that creates new computing technologies and solutions for industry and society at large.
- To foster vibrant outreach programs for industry, research organizations, academia and society.

VIT[®]
Vellore Institute of Technology
(Deemed to be University under section 3 of UGC Act, 1956)

B. Tech. Computer Science and Engineering (Internet of Things)

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

1. Graduates will be engineering practitioners and leaders, who would help solve industry's technological problems.
2. Graduates will be engineering professionals, innovators or entrepreneurs engaged in technology development, technology deployment, or engineering system implementation in industry.
3. Graduates will function in their profession with social awareness and responsibility.
4. Graduates will interact with their peers in other disciplines in industry and society and contribute to the economic growth of the country.
5. Graduates will be successful in pursuing higher studies in engineering or management.
6. Graduates will pursue career paths in teaching or research.

B. Tech. Computer Science and Engineering (Internet of Things)

PROGRAMME OUTCOMES (POs)

PO_01: Having an ability to apply mathematics and science in engineering applications.

PO_02: Having a clear understanding of the subject related concepts and of contemporary issues and apply them to identify, formulate and analyse complex engineering problems.

PO_03: Having an ability to design a component or a product applying all the relevant standards and with realistic constraints, including public health, safety, culture, society and environment

PO_04: Having an ability to design and conduct experiments, as well as to analyse and interpret data, and synthesis of information

PO_05: Having an ability to use techniques, skills, resources and modern engineering and IT tools necessary for engineering practice

PO_06: Having problem solving ability- to assess social issues (societal, health, safety, legal and cultural) and engineering problems

PO_07: Having adaptive thinking and adaptability in relation to environmental context and sustainable development

PO_08: Having a clear understanding of professional and ethical responsibility

PO_09: Having cross cultural competency exhibited by working as a member or in teams

PO_10: Having a good working knowledge of communicating in English – communication with engineering community and society

PO_11: Having a good cognitive load management skills related to project management and finance

PO_12: Having interest and recognise the need for independent and lifelong learning

VIT[®]
Vellore Institute of Technology
(Deemed to be University under section 3 of UGC Act, 1956)

B. Tech. Computer Science and Engineering (Internet of Things)

PROGRAMME SPECIFIC OUTCOMES (PSOs)

1. Apply computing theory, languages and algorithms, as well as mathematical and statistical models, and the principles of optimization to appropriately formulate and use data analysis.
2. Apply the principles and techniques of database design, administration, and implementation to enhance data collection capabilities and decision-support systems. Ability to critique the role of information and analytics in supporting business processes and functions.
3. Invent and use appropriate models of data analysis, assess the quality of input, derive insight from results, and investigate potential issues. Also to organize big data sets into meaningful structures, incorporating data profiling and quality standards.

Category Credit Detail			
Sl.No.	Description	Credits	Maximum Credit
1	FC - Foundation Core	53	53
2	DLES - Discipline-linked Engineering Sciences	12	12
3	DC - Discipline Core	47	47
4	SPE - Specialization Elective	21	21
5	PI - Projects and Internship	9	9
6	OE - Open Elective	9	9
7	BC - Bridge Course	0	0
8	NGCR - Non-graded Core Requirement	11	11
Total Credits		162

Foundation Core

BCHY101L	Engineering Chemistry	L	T	P	C
		3	0	0	3
Pre-requisite	NIL	Syllabus version			
		1.0			
Course Objectives					
<ol style="list-style-type: none"> 1. To enable students to have fundamental understanding of the basic concepts of different disciplines of chemistry. 2. To provide avenues for learning advanced concepts from school to university 3. To empower students with emerging concepts in applied chemistry to be useful in addressing societal needs 4. To integrate analytical and computational ability with experimental skills to create individuals competent in basic science and its by-product of its application. 5. To offer opportunities to create pathways for self-reliant in terms of knowledge and higher learning 					
Course Outcomes :					
<ol style="list-style-type: none"> 1. Understand the fundamental concepts in organic, inorganic, physical, and analytical chemistry. 2. Analyze the principles of applied chemistry in solving the societal issues. 3. Apply chemical concepts for the advancement of materials. 4. Appreciate the fundamental principles of spectroscopy and the related applications. 5. Design new materials, energy conversion devices and new protective coating techniques. 					
Module:1	Chemical thermodynamics and kinetics	6 hours			
Laws of thermodynamics - entropy change (selected processes) – spontaneity of a chemical reaction and Gibbs free energy - heat transfer; Kinetics - Concept of activation energy and energy barrier - Arrhenius equation- effect of catalysts (homo and heterogeneous) – Enzyme catalysis (Michaelis-Menten Mechanism).					
Module:2	Metal complexes and organometallics	6 hours			
Inorganic complexes - structure, bonding and application; Organometallics – introduction, stability, structure and applications of metal carbonyls, ferrocene and Grignard reagent; Metals in biology (haemoglobin, chlorophyll- structure and property).					
Module:3	Organic intermediates and reaction transformations	6 hours			
Organic intermediates - stability and structure of carbocations, carbanions and radicals; Aromatics (aromaticity) and heterocycles (3, 4, 5, 6 membered and fused systems); Organic transformations for making useful drugs for specific disease targets (two examples) and dyes (addition, elimination, substitution and cross coupling reactions).					
Module:4	Energy devices	6 hours			
Electrochemical and electrolytic cells – electrode materials with examples (semi-conductors), electrode-electrolyte interface- chemistry of Li ion secondary batteries, supercapacitors; Fuel cells: H ₂ -O ₂ and solid oxide fuel cell (SOFC); Solar cells - photovoltaic cell (silicon based), photoelectrochemical cells and dye-sensitized cells.					
Module:5	Functional materials	7 hours			
Oxides of AB, AB ₂ , ABO ₃ type (specific examples); Composites - types and properties; Polymers - thermosetting and thermoplastic polymers – synthesis and application (TEFLON, BAKELITE); Conducting polymers- polyacetylene and effect of doping – chemistry of display devices specific to OLEDs; Nano materials – introduction, bulk vs nano (quantum dots), top-down and bottom-up approaches for synthesis, and properties of nano Au.					
Module:6	Spectroscopic, diffraction and microscopic techniques	5 hours			
Fundamental concepts in spectroscopic and instrumental techniques; Principle and applications of UV-Visible and XRD techniques (numericals); Overview of various techniques such as AAS, IR, NMR, SEM and TEM.					
Module:7	Industrial applications	7 hours			

Water purification methods - zeolites, ion-exchange resins and reverse osmosis; Fuels and combustion -LCV, HCV, Bomb calorimeter (numericals), anti-knocking agents); Protective coatings for corrosion control: cathodic and anodic protection - PVD technique; Chemical sensors for environmental monitoring - gas sensors; Overview of computational methodologies: energy minimization and conformational analysis.			
Module:8	Contemporary topics		2 hours
Guest lectures from Industry and, Research and Development Organizations			
	Total Lecture hours:		45 hours
Textbook			
1.	Theodore E. Brown, H Eugene, LeMay Bruce E. Bursten, Catherine Murphy, Patrick Woodward, Matthew E. Stoltzfus, Chemistry: The Central Science, 2017, 14th edition, Pearson Publishers, 2017. UK		
Reference Books			
1.	Peter Vollhardt, Neil Schore, Organic Chemistry: Structure and Function, 2018, 8th ed. WH Freeman, London		
2.	Atkins' Physical Chemistry: International, 2018, Eleventh edition, Oxford University Press; UK		
3.	Colin Banwell, Elaine McCash, Fundamentals for Molecular Spectroscopy, 4th Edition, McGraw Hill, US		
4.	Solid State Chemistry and its Applications, Anthony R. West. 2014, 2nd edition, Wiley, UK.		
5.	Angèle Reinders, Pierre Verlinden, Wilfried van Sark, Alexandre Freundlich, Photovoltaic solar energy: From fundamentals to Applications, 2017, Wiley publishers, UK.		
6.	Lawrence S. Brown and Thomas Holme, Chemistry for engineering students, 2018, 4 th edition – <i>Open access version</i>		
Mode of Evaluation: CAT, Written assignment, Quiz and FAT			
Recommended by Board of Studies		28.06.2021	
Approved by Academic Council		No. 63	Date 23.09.2021

BCHY101P	Engineering Chemistry Lab			L	T	P	C
				0	0	2	1
Pre-requisite	NIL			Syllabus version			
				1.0			
Course Objective							
To apply theoretical knowledge gained in the theory course and get hands-on experience of the topics.							
Course Outcome :							
At the end of the course the student will be able to							
1. Understand the importance and hands-on experience on analysis of metal ions by means of experiments.							
2. Get practical experience on synthesis and characterization of the organic molecules and nanomaterials in the laboratory.							
3. Apply their knowledge in thermodynamic functions, kinetics and molecular geometries through the experiments.							
Indicative Experiments							
1.	Thermodynamics functions from EMF measurements : Zinc – Copper system						
2.	Determination of reaction rate, order and molecularity of ethylacetate hydrolysis						
3.	Colorimetric estimation of Ni ²⁺ using conventional and smart phone digital-imaging methods						
4.	Laboratory scale preparation of important drug intermediate - para aminophenol for the synthesis for acetaminophen						
5.	Magnesium-sea water activated cell – Effect of salt concentration on voltage generation						
6.	Analysis of iron in an alloy sample by potentiometry						
7.	Preparation of tin oxide by sol- gel method and its characterization						
8.	Size dependent colour variation of Cu ₂ O nanoparticles by spectrophotometer						
9.	Determination of hardness of water sample by complexometric titration before and after ion-exchange process						
10.	Computational Optimization of molecular geometry using Avogadro software						
Total Laboratory Hours						30 hours	
Mode of assessment: Mode of assessment: Continuous assessment / FAT / Oral examination and others							
Recommended by Board of Studies				28.06.2021			
Approved by Academic Council				No. 63	Date	23.09.2021	

BCSE101E	Computer Programming: Python	L	T	P	C
		1	0	4	3
Pre-requisite	NIL	Syllabus version			
		1.0			
Course Objectives					
1. To provide exposure to basic problem-solving techniques using computers.					
2. To inculcate the art of logical thinking abilities and propose novel solutions for real world problems through programming language constructs.					
Course Outcome					
1. Classify various algorithmic approaches, categorize the appropriate data representation, and demonstrate various control constructs.					
2. Choose appropriate programming paradigms, interpret and handle data using files to propose solution through reusable modules; idealize the importance of modules and packages.					
Module:1	Introduction to Problem Solving	1 hour			
Problem Solving: Definition and Steps, Problem Analysis Chart, Developing an Algorithm, Flowchart and Pseudocode.					
Module:2	Python Programming Fundamentals	2 hours			
Introduction to python – Interactive and Script Mode – Indentation – Comments – Variables – Reserved Words – Data Types – Operators and their precedence – Expressions – Built-in Functions – Importing from Packages.					
Module:3	Control Structures	2 hours			
Decision Making and Branching: if, if-else, nested if, multi-way if-elif statements – Looping: while loop, for loop – else clauses in loops, nested loops – break, continue and pass statements.					
Module:4	Collections	3 hours			
Lists: Create, Access, Slicing, Negative indices, List methods, List comprehensions – Tuples: Create, Indexing and slicing, Operations on tuples – Dictionary: Create, add, and replace values, Operations on dictionaries – Sets: Creation and operations.					
Module:5	Strings and Regular Expressions	2 hours			
Strings: Comparison, Formatting, Slicing, Splitting, Stripping – Regular Expressions: Matching, Search and replace, Patterns.					
Module:6	Functions and Files	3 hours			
Functions – Parameters and Arguments: Positional arguments, Keyword arguments, Parameters with default values – Local and Global scope of variables – Functions with Arbitrary arguments – Recursive Functions – Lambda Function. Files: Create, Open, Read, Write, Append and Close – tell and seek methods.					
Module:7	Modules and Packages	2 hours			
Built-in modules – User-Defined modules – Overview of Numpy and Pandas packages.					
Total Lecture hours:					15 hours
Text Book(s)					
1.	Eric Matthes, Python Crash Course: A Hands-On, Project-Based Introduction to Programming, 2nd Edition, No starch Press, 2019				
Reference Books					
1.	Martic C Brown, Python: The Complete Reference, 4th Edition, McGraw Hill Publishers, 2018.				
2.	John V. Guttag, Introduction to computation and programming using python: with applications to understanding data. 2nd Edition, MIT Press, 2016.				

Mode of Evaluation: No separate evaluation for theory component.			
Indicative Experiments			
1.	Problem Analysis Chart, Flowchart and Pseudocode Practices.		
2.	Sequential Constructs using Python Operators, Expressions.		
3.	Branching (if, if-else, nested if, multi-way if-elif statements) and Looping (for, while, nested looping, break, continue, else in loops).		
4.	List, Tuples, Dictionaries & Sets.		
5.	Strings, Regular Expressions.		
6.	Functions, Lambda, Recursive Functions and Files.		
7.	Modules and Packages (NumPy and Pandas)		
Total Laboratory Hours			60 hours
Text Book(s)			
1.	Mariano Anaya, Clean Code in Python: Develop maintainable and efficient code, 2 nd Edition, Packt Publishing Limited, 2021.		
Reference Books			
1.	Harsh Bhasin, Python for beginners, 1 st Edition, New Age International (P) Ltd., 2019,

Approved by Academic Council		No. 63	Date 23.09.2021

BCSE102L	Structured and Object-Oriented Programming	L	T	P	C
		2	0	0	2
Pre-requisite	NIL	Syllabus version			
		1.0			
Course Objectives					
<ol style="list-style-type: none"> 1. To impart the basic constructs in structured programming and object-oriented programming paradigms. 2. To inculcate the insights and benefits in accessing memory locations by implementing real world problems. 3. To help solving real world problems through appropriate programming paradigms. 					
Course Outcome					
At the end of the course, students should be able to:					
<ol style="list-style-type: none"> 1. Understand different programming language constructs and decision-making statements; manipulate data as a group. 2. Recognize the application of modular programming approach; create user defined data types and idealize the role of pointers. 3. Comprehend various elements of object-oriented programming paradigm; propose solutions through inheritance and polymorphism; identify the appropriate data structure for the given problem and devise solution using generic programming techniques. 					
Module:1 C Programming Fundamentals		2 hours			
Variables - Reserved words – Data Types – Operators – Operator Precedence - Expressions - Type Conversions - I/O statements - Branching and Looping: if, if-else, nested if, if-else ladder, switch statement, goto statement - Loops: for, while and do...while – break and continue statements.					
Module:2 Arrays and Functions		4 hours			
Arrays: One Dimensional array - Two-Dimensional Array – Strings and its operations. User Defined Functions: Declaration – Definition – call by value and call by reference - Types of Functions - Recursive functions - Storage Classes - Scope, Visibility and Lifetime of Variables.					
Module:3 Pointers		4 hours			
Declaration and Access of Pointer Variables, Pointer arithmetic – Dynamic memory allocation – Pointers and arrays - Pointers and functions.					
Module:4 Structure and Union		2 hours			
Declaration, Initialization, Access of Structure Variables - Arrays of Structure - Arrays within Structure - Structure within Structures - Structures and Functions – Pointers to Structure -					
Module:5 Overview of Object-Oriented Programming		5 hours			
Features of OOP - Classes and Objects - “this” pointer - Constructors and Destructors - Static Data Members, Static Member Functions and Objects - Inline Functions – Call by reference - Functions with default Arguments - Functions with Objects as Arguments - Friend Functions and Friend Classes.					
Module:6 Inheritance		5 hours			
Inheritance - Types of Inheritance: Single inheritance, Multiple Inheritance, Multi-level					

Inheritance, Hierarchical Inheritance - Multipath Inheritance - Inheritance and constructors.			
Module:7 Polymorphism		4 hours	
Function Overloading - Operator Overloading – Dynamic Polymorphism - Virtual Functions - Pure virtual Functions - Abstract Classes.			
Module:8 Generic Programming		4 hours	
Function templates and class templates, Standard Template Library.			
		Total Lecture hours:	30 hours
Text Book(s)			
1.	Herbert Schildt, C: The Complete Reference, 4 th Edition, McGraw Hill Education, 2017		
2.	Herbert Schildt, C++: The Complete Reference, 4 th Edition, McGraw Hill Education, 2017.

Approved by Academic Council		No. 63	Date 23.09.2021

BCSE102P	Structured and Object-Oriented Programming Lab	L	T	P	C
		0	0	4	2
Pre-requisite	NIL	Syllabus version			
		1.0			
Course Objectives					
<ol style="list-style-type: none"> 1. To impart the basic constructs in structured programming and object-oriented programming paradigms. 2. To inculcate the insights and benefits in accessing memory locations by implementing real world problems. 3. To solve real world problems through appropriate programming paradigms. 					
Course Outcome					
<p>At the end of the course, students should be able to:</p> <ol style="list-style-type: none"> 1. Understand different programming language constructs and decision-making statements; manipulate data as a group. 2. Recognize the application of modular programming approach; create user defined data types and idealize the role of pointers. 3. Comprehend various elements of object-oriented programming paradigm; propose solutions through inheritance and polymorphism; identify the appropriate data structure for the given problem and devise solution using generic programming techniques. 					
Indicative Experiments					
1.	Programs using basic control structures, branching and looping				
2.	Experiment the use of 1-D, 2-D arrays and strings and Functions				
3.	Demonstrate the application of pointers				
4.	Experiment structures and unions				
5.	Programs on basic Object-Oriented Programming constructs.				
6.	Demonstrate various categories of inheritance				
7.	Program to apply kinds of polymorphism.				
8.	Develop generic templates and Standard Template Libraries.				
Total Laboratory Hours					60 hours

BCSE103E	Computer Programming : Java	L	T	P	C
		1	0	4	3
Pre-requisite	NIL	Syllabus version			
		1.0			
Course Objectives:					
<ol style="list-style-type: none"> To introduce the core language features of Java and understand the fundamentals of Object -Oriented programming in Java. To develop the ability of using Java to solve real world problems. 					
Course Outcome:					
At the end of this course, students should be able to:					
<ol style="list-style-type: none"> Understand basic programming constructs; realize the fundamentals of Object Orientated Programming in Java; apply inheritance and interface concepts for enhancing code reusability. Realize the exception handling mechanism; process data within files and use the data structures in the collection framework for solving real world problems. 					
Module:1	Java Basics	2 hours			
OOP Paradigm - Features of Java Language - JVM - Bytecode - Java program structure – Basic programming constructs - data types - variables – Java naming conventions – operators.					
Module:2	Looping Constructs and Arrays	2 hours			
Control and looping constructs - Arrays – one dimensional and multi-dimensional – enhanced for loop – Strings - Wrapper classes.					
Module:3	Classes and Objects	2 hours			
Class Fundamentals – Access and non-access specifiers - Declaring objects and assigning object reference variables – array of objects – constructors and destructors – usage of “this” and “static” keywords.					
Module:4	Inheritance and Polymorphism	3 hours			
Inheritance – types – use of “super” – final keyword - Polymorphism – Overloading and Overriding - abstract class – Interfaces.					
Module:5	Packages and Exception Handling	2 hours			
Packages: Creating and Accessing - Sub packages. Exception Handling - Types of Exception - Control Flow in Exceptions - Use of try, catch, finally, throw, throws in Exception Handling - User defined exceptions.					
Module:6	IO Streams and Files	2 hours			
Java I/O streams – FileInputStream & FileOutputStream – FileReader & FileWriter-DataInputStream & DataOutputStream – BufferedInputStream & BufferedOutputStream – PrintOutputStream - Serialization and Deserialization.					
Module:7	Collection Framework	2 hours			
Generic classes and methods - Collection framework: List and Map.					
Total Lecture hours:					15 hours
Text Book(s)

3	E.Balagurusamy, “Programming with Java”, Tata McGraw-Hill publishers, 6 th edition, 2019				

Mode of Evaluation: No separate evaluation for theory component.			
Indicative Experiments			
1.	Programs using sequential and branching structures.		
2.	Experiment the use of looping, arrays and strings.		
3.	Demonstrate basic Object-Oriented programming elements.		
4.	Experiment the use of inheritance, polymorphism and abstract classes.		
5.	Designing packages and demonstrate exception handling.		
6.	Demonstrate the use of IO streams, file handling and serialization.		
7.	Program to discover application of collections.

Course Code	Course Title	L	T	P	C
BEEE102L	Basic Electrical and Electronics Engineering	3	0	0	3
Pre-requisite	NIL	Syllabus version			
		1.0			
Course Objectives					
1. Familiarize with various laws and theorems to solve electric and electronic circuits 2. Provide an overview on working principle of machines 3. Excel the concepts of semiconductor devices, op-amps and digital circuits					
Course Outcomes					
On completion of the course, the students will be able to:					
1. Evaluate DC and AC circuit parameters using various laws and theorems 2. Comprehend the parameters of magnetic circuits 3. Classify and compare various types of electrical machines and its applications 4. Design basic combinational circuits in digital system 5. Analyze the characteristics and applications of semiconductor devices					
Module:1	DC Circuits	7 hours			
Basic circuit elements and sources; Ohms law; Kirchhoff's laws; Series and Parallel connection of circuit elements; Star-delta transformation; Mesh current analysis; Node voltage analysis; Theorems: Thevenin's, Maximum power transfer and Superposition theorem.					
Module:2	AC Circuits	8 hours			
Alternating voltages and currents, RMS, average, maximum values, Single Phase RL, RC, RLC series circuits, Power in AC circuits, Power Factor, Three phase balanced systems, Star and delta Connections, Electrical Safety, Fuses and Earthing.					
Module:3	Magnetic Circuits	7 hours			
Magnetic field; Toroidal core: Flux density, Flux linkage; Magnetic circuit with airgap; Reluctance in series and parallel circuits; Self and mutual inductance; Transformer: turn ratio determination.					
Module:4	Electrical Machines	7 hours			
Construction, working principle and applications of DC Machines, Transformers, Three phase Induction motors, synchronous generators, single phase induction motors, special machines stepper motor, universal motor and BLDC motor.					
Module:5	Digital Systems	7 hours			
Binary arithmetic; Number base conversion; Boolean algebra: simplification of Boolean functions using K-maps; Logic gates; Design of basic combinational circuits: adders, multiplexers, de-multiplexers.					
Module:6	Semiconductor Devices and Applications	7 hours			
Characteristics: PN junction diode, Zener diode, BJT, MOSFET; Applications: Rectifier, Voltage regulator, Operational amplifier.					
Module:7	Contemporary Issues	2 hours			
Total Lecture hours:					45 hours

BEEE102P	Basic Electrical and Electronics Engineering Lab	0	0	2	1
Pre-requisite	Nil	Syllabus version			
		1.0			
Course Objective					
1. Design and solve the fundamental electrical and electronics circuits					
Course Outcomes					
1. Identify appropriate method of solving the fundamental electrical and electronics circuits					
2. Design and conduct experiments on electrical and electronics circuits					
Experiments (Indicative)					
1	Verification of Kirchoff's law				
2	Verification of Maximum Power Transfer Theorem				
3	Staircase wiring circuit layout for multi storage building				
4	Lamp dimmer circuit (Darlington pair circuit using transistors) used in cars.				
5	Measurement of Earth resistance using Megger				
6	Sinusoidal steady state response of RLC circuits				
7	Three phase power measurement for ac loads				
8	Design of half-adder and full-adder digital circuits				
9	Synthesis of 8x1 multiplexer and 1x8 de-multiplexers				
10	Characteristics of PN diode and acts as switch				
11	Realization of single-phase rectifier				
12	Design of regulated power supply using Zener diode.				
13	Characteristics of MOSFET				
14	Characteristics of BJT				
15	Measurement of energy using single-phase energy meter				
16	Measurement of power in a 1-phase circuit by using CTs and PTs

BENG101L		Technical English Communication		L	T	P	C
				2	0	0	2
Pre-requisite		NIL		Syllabus version			
				1.0			
Course Objectives:							
<ol style="list-style-type: none"> 1. To develop LSRW skills for effective communication in professional situations 2. To enhance knowledge of grammar and vocabulary for meaningful communication 3. To understand information from diverse texts for effective technical communication 							
Course Outcomes:							
<ol style="list-style-type: none"> 1. Use grammar and vocabulary appropriately while writing and speaking 2. Apply the concepts of communication skills in formal and informal situations 3. Demonstrate effective reading and listening skills to synthesize and draw intelligent inferences 4. Write clearly and significantly in academic and general contexts 							
Module:1	Introduction to Communication					4 hours	
Nature and Process - Types of communication: Intra-personal, Interpersonal, Group-verbal and non-verbal communication / Cross-cultural Communication - Communication Barriers and Essentials of good communication - Principles of Effective Communications							
Module:2	Grammatical Aspects					4 hours	
Sentence Pattern - Modal Verbs - Concord (SVA) - Conditionals - Error detection							
Module:3	Written Correspondence					4 hours	
Job Application Letters - Resume Writing - Statement of Purpose							
Module:4	Business Correspondence					4 hours	
Business Letters: Calling for Quotation, Complaint & Sales Letter – Memo - Minutes of Meeting - Describing products and processes							
Module:5	Professional Writing					4 hours	
Paraphrasing & Summarizing - Executive Summary - Structure and Types of Proposal – Recommendations							
Module:6	Team Building & Leadership Skills					4 hours	
Principles of Leadership - Team Leadership Model - Negotiation Skills - Conflict Management							
Module:7	Research Writing					4 hours	
Interpreting and Analysing a research article - Approaches to Review Paper Writing - Structure of a research article - Referencing							
Module:8	Guest Lecture from Industry and R&D organizations					2 hours	
Contemporary Issues							
Total Lecture hours:						30 hours

Pre-requisite	NIL			Syllabus version			
				1.0			
Course Objectives:							
1. To use appropriate grammatical structures in professional communication							
2. To improve English communication skills for better employability							
3. To enhance meaningful communication skills in writing and public speaking							
Course Outcomes:							
1. Demonstrate professional rhetoric and articulate ideas effectively							
2. Interpret material on technology and deliver eloquent presentations							
3. Apply receptive and productive skills in real life situations and develop workplace communication							
Indicative Experiments							
1.	Grammar & Vocabulary Error Detection Activity: -Worksheets						
2.	Listening to Narratives Interviews of eminent personalities & Ted Talks Activity: Listening Comprehension / Summarising						
3.	Video Resume SWOT Analysis & digital resume techniques Activity: Preparing a digital résumé for mock interview						
4.	Product & Process Description Describing and Sequencing Activity: Demonstration of product and process						
5.	Mock Meetings Types of meetings and meeting etiquette Activity: Conduct of meetings and drafting minutes of the meeting						
6.	Reading research article Scientific and Technical articles Activity: Writing Literature review						
7.	Analytical Reading Case Studies on Communication, Team Building and Leadership Activity: Group Discussion						
8.	Presentations Preparing Conference/Seminar paper Activity: Individual/ Group presentations						
9.	Intensive Listening Scientific documentaries Activity: Note taking and Summarising						
10.	Interview Skills Interview questions and techniques Activity: Mock Interviews

BENG102P	Technical Report Writing		LITIPIC
			o o 2 11
Pre-requisite	Technical English Communication	Syllabus version	
		1.0	
Course Objectives:			
1. To augment specific writing skills for preparing technical reports			
2. To think critically, evaluate, analyse general and complex technical information			
3. To acquire proficiency in writing and presenting reports			
Course Outcomes:			
1. Write error free sentences using appropriate grammar, vocabulary and style			
2. Synthesize information and concepts in preparing reports			
3. Demonstrate the ability to write and present reports on diverse topics			
Indicative Experiments			
1.	Advanced Grammar, Vocabulary and Editing Usage of Tenses – Adjectives and Adverbs – Jargon vs Technical Vocabulary – Abbreviations – Mechanics of Editing: Punctuation and Proof Reading Activity: Worksheets		
2.	Research and Analyses Synchronise Technical Details from Newspapers – Magazines – Articles and e-content Activity: Writing introduction and literature review		
3.	Systematisation of Information Techniques to Converge Objective-Oriented data in Diverse Technical Reports Activity: Preparing Questionnaire		
4.	Data Visualisation Interpreting Data – Graphs – Tables– Charts – Imagery – Infographics Activity: Transcoding		
5.	Introduction to Reports Meaning – Definition – Purpose – Characteristics and Types of Reports Activity: Worksheets on Types of reports		
6.	Structure of Reports Title– Preface– Acknowledgement – Abstract– Summary– Introduction – Materials and Methods– Results– Discussion – Conclusion – Suggestions/Recommendations Activity: Identifying the structure of report		
7.	Report Writing Data Collection – Draft an Outline and Organize Information Activity: Drafting reports		
8.	Supplementary Texts Appendix– Index– Glossary– References– Bibliography – Notes Activity: Organizing supplementary texts		
9.	Review of Final Reports Structure– Content– Style – Layout and Referencing Activity: Examining clarity and coherence in final reports		
10.	Presentation Presenting Technical Reports Activity: Planning, creating and digital presentation of reports

BMAT101L		Calculus		L	T	P	C
				3	0	0	3
Pre-requisite	Nil	Syllabus version					
		1.0					
Course Objectives							
<p>1. To provide the requisite and relevant background necessary to understand the other important engineering mathematics courses offered for Engineers and Scientists.</p> <p>2. To introduce important topics of applied mathematics, namely Single and Multivariable Calculus and Vector Calculus etc.</p> <p>3. Enhance to use technology to model the physical situations into mathematical problems, experiment, interpret results, and verify conclusions.</p>							
Course Outcomes							
<p>At the end of the course the student should be able to:</p> <p>1. Apply single variable differentiation and integration to solve applied problems in engineering and find the maxima and minima of functions</p> <p>2. Evaluate partial derivatives, limits, total differentials, Jacobians, Taylor series and optimization problems involving several variables with or without constraints</p> <p>3. Evaluate multiple integrals in Cartesian, Polar, Cylindrical and Spherical coordinates.</p> <p>4. Use special functions to evaluate various types of integrals.</p> <p>5. Understand gradient, directional derivatives, divergence, curl, Green's, Stokes and Gauss Divergence theorems.</p>							
Module:1		Single Variable Calculus				8 hours	
Differentiation- Extrema on an Interval Rolle's Theorem and the Mean value theorem-Increasing and decreasing functions.-First derivative test-Second derivative test-Maxima and Minima-Concavity. Integration-Average function value - Area between curves - Volumes of solids of revolution.							
Module:2		Multivariable Calculus				5 hours	
Functions of two variables-limits and continuity-partial derivatives –total differential-Jacobian and its properties.							
Module:3		Application of Multivariable Calculus				5 hours	
Taylor's expansion for two variables–maxima and minima–constrained maxima and minima-Lagrange's multiplier method.							
Module:4		Multiple integrals				8 hours	
Evaluation of double integrals–change of order of integration–change of variables between Cartesian and polar co-ordinates - evaluation of triple integrals-change of variables between Cartesian and cylindrical and spherical co-ordinates.							
Module:5		Special Functions				6 hours	
Beta and Gamma functions–interrelation between beta and gamma functions-evaluation of multiple integrals using gamma and beta functions. Dirichlet's integral -Error functions complementary error functions.							
Module:6		Vector Differentiation				5 hours	
Scalar and vector valued functions – gradient, tangent plane–directional derivative-divergence and curl–scalar and vector potentials. Statement of vector identities-simple problems.							
Module:7		Vector Integration				6 hours	
Line, surface and volume integrals - Statement of Green's, Stoke's and Gauss divergence theorems -verification and evaluation of vector integrals using them.							
Module:8		Contemporary Topics				2 hours	
Guest lectures from Industry and, Research and Development Organizations							
						Total Lecture hours:	
						45 hours

				0	0	2	1
Pre-requisite	NIL			Syllabus version			
				1.0			
Course Objectives							
1. To familiarize with the basic syntax, semantics and library functions of MATLAB which serves as a tool not only in calculus but also many courses in engineering and sciences							
2. To visualize mathematical functions and its related properties.							
3. To evaluate single and multiple integrals and understand it graphically.							
Course Outcomes							
At the end of the course the student should be able to:							
1. Demonstrate MATLAB code for challenging problems in engineering							
2. Using plots/displays, interpret and illustrate elementary mathematical functions and procedures.							
Indicative Experiments							
1.	Introduction to MATLAB through matrices and general Syntax						
2.	Plotting and visualizing curves and surfaces in MATLAB – Symbolic computations using MATLAB						
3.	Evaluating Extremum of a single variable function						
4.	Understanding integration as Area under the curve						
5.	Evaluation of Volume by Integrals (Solids of Revolution)						
6.	Evaluating maxima and minima of functions of two variables						
7.	Applying Lagrange multiplier optimization method						
8.	Evaluating Volume under surfaces						
9.	Evaluating triple integrals						
10.	Evaluating gradient, curl and divergence						
11.	Evaluating line integrals in vectors						
12.	Applying Green's theorem to real world problems						
						Total Laboratory Hours	30 hours

BMAT102L	Differential Equations and Transforms	L	T	P	C
		3	1	0	4
Pre-requisite	BMAT101L, BMAT101P	Syllabus version			
		1.0			
Course Objectives					
<ol style="list-style-type: none"> 1. To impart the knowledge of Laplace transform, an important transform techniques for Engineers which requires knowledge of integration. 2. Presenting the elementary notions of Fourier series, this is vital in practical harmonic analysis. 3. Enriching the skills in solving initial and boundary value problems. 4. Impart the knowledge and application of difference equations and the Z-transform in discrete systems that are inherent in natural and physical processes. 					
Course Outcomes					
At the end of the course the student should be able to:					
<ol style="list-style-type: none"> 1. Find solution for second and higher order differential equations, formation and solving partial differential equations. 2. Understand basic concepts of Laplace Transforms and solve problems with periodic functions, step functions, impulse functions and convolution. 3. Employ the tools of Fourier series and Fourier transforms. 4. Know the techniques of solving differential equations and partial differential equations. 5. Know the Z-transform and its application in population dynamics and digital signal processing. 					
Module:1	Ordinary Differential Equations (ODE)	6 hours			
Second order non- homogenous differential equations with constant coefficients- Differential equations with variable coefficients- method of undetermined coefficients-method of Variation of parameters-Solving Damped forced oscillations and LCR circuit theory problems.					
Module:2	Partial Differential Equations (PDE)	5 hours			
Formation of partial differential equations – Singular integrals — Solutions of standard types of first order partial differential equations – Lagrange’s linear equation-Method of separation of variables					
Module:3	Laplace Transform	7 hours			
Definition- Properties of Laplace transform-Laplace transform of standard functions - Laplace transform of periodic functions-Unit step function-Impulse function. Inverse Laplace transform-Partial fractions method and by Convolution theorem..					
Module:4	Solution to ODE and PDE by Laplace transform	7 hours			
Solution of ODE’s – Non-homogeneous terms involving Heaviside function, Impulse function - Solving Non-homogeneous system using Laplace transform - solution to First order PDE by Laplace transform.					
Module:5	Fourier Series	6 hours			
Fourier series - Euler’s formulae- Dirichlet’s conditions - Change of interval - Half range series – RMS value – Parseval’s identity.					
Module:6	Fourier Transform	6 hours			
Complex Fourier transform - properties - Relation between Fourier and Laplace Transforms- Fourier sine and cosine transforms – Parseval’s identity- Convolution Theorem and simple applications to solve PDE.					
Module:7	Z-Transform	6 hours			
Definition of Z-transform and Inverse Z-transform - Standard functions - Partial fractions and					

convolution method. Difference equation - first and second order difference equations with constant coefficients - solution of simple difference equations using Z-transform.			
Module:8	Contemporary Issues	2 hours	
		Total Lecture hours:	45 hours
		Tutorial hours :	15 hours

BMAT201L	Complex Variables and Linear Algebra	L	T	P	C
		3	1	0	4
Pre-requisite	BMAT102L	Syllabus version			
		1.0			
Course Objectives					
<ol style="list-style-type: none"> 1. To present comprehensive, compact, and integrated treatment of one of the most important branches of applied mathematics namely Complex variables to the engineers and the scientists. 2. To present comprehensive, compact, and integrated treatment of another most important branches of applied mathematics namely Linear Algebra to the engineers and the scientists. 3. To provide students with a framework of the concepts that will help them to analyse deeply about many complex problems. 					
Course Outcomes					
At the end of the course the student should be able to					
<ol style="list-style-type: none"> 1. Construct analytic functions and find complex potential of fluid flow and electric fields. 2. Find the image of straight lines by elementary transformations and to express analytic functions in power series. 3. Evaluate real integrals using techniques of contour integration. 4. Use the power of inner product and norm for analysis. 5. Use matrices and transformations for solving engineering problems. 					
Module:1	Analytic Functions	7hours			
Complex variable - Analytic functions and Cauchy – Riemann equations; Laplace equation and Harmonic functions; Construction of Harmonic conjugate and analytic functions; Applications of analytic functions to fluid-flow and electric field problems.					
Module:2	Conformal and Bilinear transformations	7 hours			
Conformal mapping - Elementary transformations; Translation, Magnification, Rotation, Inversion; Exponential and Square transformations ($w = e^z, z^2$); Bilinear transformation; Cross-ratio-Images of the regions bounded by straight lines under the above transformations;					
Module:3	Complex Integration	7 hours			
Functions given by Power Series - Taylor and Laurent series-Singularities - Poles – Residues; Integration of a complex function along a contour; Statements of Cauchy-Goursat theorem- Cauchy's integral formula-Cauchy's residue theorem-Evaluation of real integrals-Indented contour integral.					
Module:4	Vector Spaces	6 hours			
Vector space – subspace; linear combination - span - linearly dependent – Independent – bases; Dimensions; Finite dimensional vector space. Row and column spaces; Rank and nullity.					
Module:5	Linear Transformations	6 hours			
Linear transformations – Basic properties; Invertible linear transformation; Matrices of linear transformations; Vector space of linear transformations; Change of bases; Similarity.					
Module:6	Inner Product Spaces	5 hours			
Dot products and inner products; Lengths and angles of vectors; Matrix representations of inner products; Gram - Schmidt – Orthogonalization.					
Module:7	Matrices and System of Equations	5 hours			
Eigenvalues and Eigen vectors; Properties of Eigenvalues and Eigen vectors; Cayley-Hamilton theorem; System of linear equations; Gaussian elimination and Gauss Jordan methods.					
Module:8	Contemporary issues:	2 hours			

	Total Lecture hours:	45 hours
	Tutorial hours :	15 hours
Text Book(s)		
<ol style="list-style-type: none"> 1. G. Dennis Zill, Patrick D. Shanahan, A first course in complex analysis with applications, 2013, 3rd Edition, Jones and Bartlett Publishers Series in Mathematics. 2. Jin Ho Kwak, Sungpyo Hong, Linear Algebra, 2004, Second edition, Springer. 		
Reference Books		
<ol style="list-style-type: none"> 1. Erwin Kreyszig, Advanced Engineering Mathematics, 2015, 10th Edition, John Wiley & Sons (Wiley student Edition). 2. Michael, D. Greenberg, Advanced Engineering Mathematics, 2006, 2nd Edition, Pearson Education. 3. Bernard Kolman, David, R. Hill, Introductory Linear Algebra - An applied first course, 2011, 9th Edition Pearson Education. 4. Gilbert Strang, Introduction to Linear Algebra, 2015, 5th Edition, Cengage Learning 5. B.S. Grewal, Higher Engineering Mathematics, 2020, 44th Edition, Khanna Publishers.

Approved by Academic Council	No. 64	Date 16-12-2021

BMAT202L	Probability and Statistics	L	T	P	C
		3	0	0	3
Pre-requisite	BMAT101L, BMAT101P	Syllabus version			
		1.0			
Course Objectives :					
<ol style="list-style-type: none"> 1. To provide students with a framework that will help them choose the appropriate descriptive methods in various data analysis situations. 2. To analyze distributions and relationship of real-time data. 3. To apply estimation and testing methods to make inference and modelling techniques for decision making. 					
Course Outcome :					
At the end of the course the student should be able to:					
<ol style="list-style-type: none"> 1. Compute and interpret descriptive statistics using numerical and graphical techniques. 2. Understand the basic concepts of random variables and find an appropriate distribution for analyzing data specific to an experiment. 3. Apply statistical methods like correlation, regression analysis in analyzing, interpreting experimental data. 4. Make appropriate decisions using statistical inference that is the central to experimental research. 5. Use statistical methodology and tools in reliability engineering problems. 					
Module:1	Introduction to Statistics	6 hours			
Statistics and data analysis; Measures of central tendency; Measure of Dispersion, Moments-Skewness-Kurtosis (Concepts only).					
Module:2	Random variables	8 hours			
Random variables- Probability mass function, distribution and density functions-Joint probability distribution and Joint density functions; Marginal, Conditional distribution and Density functions- Mathematical expectation and its properties- Covariance, Moment generating function.					
Module:3	Correlation and Regression	4 hours			
Correlation and Regression – Rank Correlation; Partial and Multiple correlation; Multiple regression.					
Module:4	Probability Distributions	7 hours			
Binomial distribution; Poisson distributions; Normal distribution; Gamma distribution; Exponential distribution; Weibull distribution.					
Module:5	Hypothesis Testing-I	4 hours			
Testing of hypothesis –Types of errors - Critical region, Procedure for testing of hypothesis- Large sample tests- Z test for Single Proportion- Difference of Proportion- Mean and difference of means.					
Module:6	Hypothesis Testing-II	9 hours			
Small sample tests- Student's t-test, F-test- chi-square test- goodness of fit - independence of attributes- Design of Experiments - Analysis of variance – One way-Two way-Three way classifications - CRD-RBD- LSD.					
Module:7	Reliability	5 hours			
Basic concepts- Hazard function-Reliabilities of series and parallel systems- System					

Reliability - Maintainability-Preventive and repair maintenance- Availability.			
Module:8	Contemporary Issues	2 hours	
Total lecture hours:			45 hours

Pre-requisite	BMAT101L, BMAT101P			Syllabus version			
				1.0			
Course Objectives:							
<ol style="list-style-type: none"> 1. To enable the students for having experimental knowledge of basic concepts of statistics using R programming. 2. To study the relationship of real-time data and decision making through testing methods using R. 3. To make students capable to do experimental research using statistics in various engineering problems. 							
Course Outcomes:							
At the end of the course the student should be able to:							
<ol style="list-style-type: none"> 1. Demonstrate R programming for statistical data. 2. Carry out appropriate analysis of statistical methods through experimental techniques using R. 							
Indicative Experiments							
1.	Introduction: Understanding Data types; importing/exporting data			Total Laboratory hours: 30			
2.	Computing Summary Statistics /plotting and visualizing data using Tabulation and Graphical Representations						
3.	Applying correlation and simple linear regression model to real dataset; computing and interpreting the coefficient of determination						
4.	Applying multiple linear regression model to real dataset; computing and interpreting the multiple coefficients of determination						
5.	Fitting the probability distributions: Binomial distribution						
6.	Normal distribution, Poisson distribution						
7.	Testing of hypothesis for one sample mean and proportion from real time problems						
8.	Testing of hypothesis for two sample means and proportion from real time problems						
9.	Applying the t-test for independent and dependent samples						
10.	Applying Chi-square test for goodness of fit test and Contingency test to real dataset						
11.	Performing ANOVA for real dataset for Completely randomized design, Randomized Block design, Latin square Design						
Text Book

Pre-requisite	NIL	Syllabus version			
		1.0			
Course Objectives					
<ol style="list-style-type: none"> To explain the dual nature of radiation and matter. To apply Schrödinger's equation to solve finite and infinite potential problems and apply quantum ideas at the nanoscale. To understand the Maxwell's equations for electromagnetic waves and apply the concepts to semiconductors for engineering applications. 					
Course Outcome					
At the end of the course the student will be able to					
<ol style="list-style-type: none"> Comprehend the phenomenon of waves and electromagnetic waves. Understand the principles of quantum mechanics. Apply quantum mechanical ideas to subatomic domain. Appreciate the fundamental principles of a laser and its types. Design a typical optical fiber communication system using optoelectronic devices. 					
Module:1	Introduction to waves	7 hours			
Waves on a string - Wave equation on a string (derivation) - Harmonic waves- reflection and transmission of waves at a boundary (Qualitative) - Standing waves and their eigenfrequencies.					
Module:2	Electromagnetic waves	7 hours			
Physics of divergence - gradient and curl - Qualitative understanding of surface and volume integral - Maxwell Equations (Qualitative) - Displacement current - Electromagnetic wave equation in free space - Plane electromagnetic waves in free space - Hertz's experiment.					
Module:3	Elements of quantum mechanics	6 hours			
Need for Quantum Mechanics: Idea of Quantization (Planck and Einstein) - Compton effect (Qualitative) – de Broglie hypothesis - - Davisson-Germer experiment - Wave function and probability interpretation - Heisenberg uncertainty principle - Schrödinger wave equation (time dependent and time independent).					
Module:4	Applications of quantum mechanics	5 hours			
Eigenvalues and eigenfunction of particle confined in one dimensional box - Basics of nanophysics - Quantum confinement and nanostructures - Tunnel effect (qualitative) and scanning tunneling microscope.					
Module:5	Lasers	6 hours			
Laser characteristics - spatial and temporal coherence - Einstein coefficients and their significance - Population inversion - two, three and four level systems - Pumping schemes - threshold gain coefficient - Components of a laser - He-Ne, Nd:YAG and CO ₂ lasers and their engineering applications.					
Module:6	Propagation of EM waves in optical fibers	6 hours			
Introduction to optical fiber communication system - light propagation through fibers - Acceptance angle - Numerical aperture - V-parameter - Types of fibers – Attenuation - Dispersion-intermodal and intramodal. Application of fiber in medicine - Endoscopy.					
Module:7	Optoelectronic devices	6 hours			
Introduction to semiconductors - direct and indirect bandgap – Sources: LED and laser diode, Photodetectors: PN and PIN.					
Module:8	Contemporary issues	2 hours			
Total Lecture hours:					45 hours

				0	0	2	1
Pre-requisite	12th or equivalent			Syllabus version			
				1.0			
Course Objectives							
To apply theoretical knowledge gained in the theory course and get hands-on experience of the topics.							
Course Outcome							
At the end of the course the student will be able to							
1. Comprehend the dual nature of radiation and matter by means of experiments.							
2. Get hands-on experience on the topics of quantum mechanical ideas in the laboratory.							
3. Apply low power lasers in optics and optical fiber related experiments.							
Indicative Experiments							
1.	To determine the dependence of fundamental frequency with the length and tension of a stretched string using sonometer.						
2.	To determine the characteristics of EM waves using Hertz experiment						
3.	To determine the wavelength of laser source (He-Ne laser and diode lasers of different wavelengths) using diffraction grating						
4.	To demonstrate the wave nature of electron by diffraction through graphite sheet						
5.	To determine the Planck's constant using electroluminescence process						
6.	To numerically demonstrate the discrete energy levels and the wavefunctions using Schrödinger equation (e.g., particle in a box problem can be given as an assignment)						
7.	To determine the refractive index of a prism using spectrometer (angle of prism will be given)						
8.	To determine the efficiency of a solar cell						
9.	To determine the acceptance angle and numerical aperture of an optical fiber						
10.	To demonstrate the phase velocity and group velocity (simulation)

Course Objectives:					
<ol style="list-style-type: none"> To enhance the logical reasoning skills of the students and help them improve problem-solving abilities To acquire skills required to solve quantitative aptitude problems To boost the verbal ability of the students for academic and professional purposes 					
Course Outcomes:					
<ol style="list-style-type: none"> Exhibit sound knowledge to solve problems of Quantitative Aptitude Demonstrate ability to solve problems of Logical Reasoning Display the ability to tackle questions of Verbal Ability 					
Module:1	Logical Reasoning	5 hours			
Word group categorization questions					
Puzzle type class involving students grouping words into right group orders of logical sense					
Cryptarithmic					
Module:2	Data arrangements and Blood relations	6 hours			
Linear Arrangement - Circular Arrangement - Multi-dimensional Arrangement - Blood Relations					
Module:3	Ratio and Proportion	6 hours			
Ratio - Proportion - Variation - Simple equations - Problems on Ages - Mixtures and alligations					
Module:4	Percentages, Simple and Compound Interest	6 hours			
Percentages as Fractions and Decimals - Percentage Increase / Decrease - Simple Interest - Compound Interest - Relation Between Simple and Compound Interest					
Module:5	Number System	6 hours			
Number system- Power cycle - Remainder cycle - Factors, Multiples - HCF and LCM					
Module:6	Essential grammar for Placement	7 hours			
<ul style="list-style-type: none"> Prepositions Adjectives and Adverbs Tense Speech and Voice Idioms and Phrasal Verbs Collocations, Gerunds and Infinitives Definite and Indefinite Articles Omission of Articles Prepositions Compound Prepositions and Prepositional Phrases Interrogatives 					
Module:7	Reading Comprehension for Placement	3 hours			
Types of questions - Comprehension strategies - Practice exercises					
Module:8	Vocabulary for Placement	6 hours			
Exposure to questions related to Synonyms – Antonyms – Analogy - Confusing words - Spelling correctness					
Total Lecture hours:					45 hours

		1.0					
Course Objectives:							
<ol style="list-style-type: none"> 1. Help to trigger the students' logical thinking skills and apply it in real-life scenarios 2. Learn to deploy the strategies of solving quantitative ability problems 3. To expand the verbal ability of students 4. Assist to run the gamut of employability skills 							
Course Outcomes:							
<ol style="list-style-type: none"> 1. Become proficient in interacting and using decision making models effectively 2. Help to understand the given concepts expressly to deliver an impactful presentation 3. Acquire knowledge of solving quantitative aptitude and verbal ability questions effortlessly 							
Module:1	Logical Reasoning puzzles - Advanced	2 hours					
Advanced puzzles: <ul style="list-style-type: none"> • Sudoku • Mind-bender style word statement puzzles • Anagrams • Rebus puzzles 							
Module:2	Logical connectives, Syllogism and Venn diagrams	2 hours					
Logical Connectives - Advanced Syllogisms - 4, 5, 6 and other multiple statement problems - Challenging Venn Diagram questions: Set theory							
Module:3	Permutation, Combination and Probability - Advanced	4 hours					
Fundamental Counting Principle- Permutation and Combination - Computation of Permutation - Advanced problems - Circular Permutations - Computation of Combination - Advanced problems -Advanced probability							
Module:4	Quantitative Aptitude	6 hours					
Logarithms, Progressions, Geometry and Quadratic equations - Advanced <ul style="list-style-type: none"> • Logarithm • Arithmetic Progression • Geometric Progression • Geometry • Mensuration • Coded inequalities • Quadratic Equations Concepts followed by advanced questions of CAT level							
Module:5	Image interpretation	2 hours					
Image interpretation: Methods - Exposure to image interpretation questions through brainstorming and practice							
Module:6	Critical Reasoning - Advanced	3 hours					
Concepts of Critical Reasoning - Exposure to advanced questions of GMAT level							
Module:7	Recruitment Essentials	8 hours					
Mock interviews							
Cracking other kinds of interviews							

Skype/ Telephonic interviews Panel interviews Stress interviews			
Guesstimation			
1. Best methods to approach Guesstimation questions			
2. Practice with impromptu interview on Guesstimation questions			
Case studies/ situational interview			
1. Scientific strategies to answer case study and situational interview questions			
2. Best ways to present cases			
3. Practice on presenting cases and answering situational interviews asked in recruitment rounds			
Module:8	Problem solving and Algorithmic skills	18 hours	
Logical methods to solve problem statements in Programming - Basic algorithms introduced			
Total Lecture hours: 45 hours

Discipline Linked Engineering Sciences

Course Code	Course Title	L	T	P	C
BECE102L	Digital Systems Design	3	0	0	3
Pre-requisite	Nil	Syllabus version			
		1.0			
Course Objectives					
<ol style="list-style-type: none"> 1. Provide an understanding of Boolean algebra and logic functions. 2. Develop the knowledge of combinational and sequential logic circuit design. 3. Design and model the data path circuits for digital systems. 4. Establish a strong understanding of programmable logic. 5. Enable the student to design and model the logic circuits using Verilog HDL. 					
Course Outcome					
At the end of the course the student will be able to					
<ol style="list-style-type: none"> 1. Optimize the logic functions using and Boolean principles and K-map. 2. Model the Combinational and Sequential logic circuits using Verilog HDL. 3. Design the various combinational logic circuits and data path circuits. 4. Analyze and apply the design aspects of sequential logic circuits. 5. Analyze and apply the design aspects of Finite state machines. 6. Examine the basic architectures of programmable logic devices. 					
Module:1	Digital Logic	8 hours			
Boolean Algebra: Basic definitions, Axiomatic definition of Boolean Algebra, Basic Theorems and Properties of Boolean Algebra, Boolean Functions, Canonical and Standard Forms, Simplification of Boolean functions. Gate-Level Minimization: The Map Method (K-map up to 4 variable), Product of Sums and Sum of Products Simplification, NAND and NOR Implementation. Logic Families: Digital Logic Gates, TTL and CMOS logic families.					
Module:2	Verilog HDL	5 hours			
Lexical Conventions, Ports and Modules, Operators, Dataflow Modelling, Gate Level Modelling, Behavioural Modeling, Test Bench.					
Module:3	Design of Combinational Logic Circuits	8 hours			
Design Procedure, Half Adder, Full Adder, Half Subtractor, Full Subtractor, Decoders, Encoders, Multiplexers, De-multiplexers, Parity generator and checker, Applications of Decoder, Multiplexer and De-multiplexer. Modeling of Combinational logic circuits using Verilog HDL.					
Module:4	Design of data path circuits	6 hours			
N-bit Parallel Adder/Subtractor, Carry Look Ahead Adder, Unsigned Array Multiplier, Booth Multiplier, 4-Bit Magnitude comparator. Modeling of data path circuits using Verilog HDL.					
Module:5	Design of Sequential Logic Circuits	8 hours			
Latches, Flip-Flops - SR, D, JK & T, Buffer Registers, Shift Registers - SISO, SIPO, PISO, PIPO, Design of synchronous sequential circuits: state table and state diagrams, Design of counters: Modulo-n, Johnson, Ring, Up/Down, Asynchronous counter. Modeling of sequential logic circuits using Verilog HDL.					
Module:6	Design of FSM	4 hours			
Finite state Machine(FSM):Mealy FSM and Moore FSM , Design Example : Sequence detection, Modeling of FSM using Verilog HDL.					
Module:7	Programmable Logic Devices	4 hours			
Types of Programmable Logic Devices: PLA, PAL, CPLD, FPGA Generic Architecture.					

Module:8	Contemporary issues	2 hours	
Total Lecture hours:			45 hours

Pre-requisite	Nil	Syllabus version			
		1.0			
Course Objective					
<ul style="list-style-type: none"> To apply theoretical knowledge gained in the theory course and get hands-on experience of the topics. 					
Course Outcome					
At the end of the course the student will be able to					
<ol style="list-style-type: none"> Design, simulate and synthesize combinational logic circuits, data path circuits and sequential logic circuits using Verilog HDL. Design and implement FSM on FPGA. Design and implement small digital systems on FPGA. 					
Indicative Experiments					
1.	Characteristics of Digital ICs, Realization of Boolean expressions				2 hours
2.	Design and Verilog modeling of Combinational Logic circuits				4 hours
3.	Design and Verilog modeling of various data path elements - Adders				2 hours
4.	Design and Verilog modeling of various data path elements - Multipliers				2 hours
5.	Implementation of combinational circuits – (FPGA / Trainer Kit)				2 hours
6.	Implementation of data path circuit - (FPGA / Trainer Kit)				2 hours
7.	Design and Verilog modeling of simple sequential circuits like Counters and Shift registers				2 hours
8.	Design and Verilog modeling of complex sequential circuits				2 hours
9.	Implementation of Sequential circuits - (FPGA / Trainer Kit)				2 hours
10.	Design and Verilog modeling of FSM based design – Serial Adder				2 hours
11.	Design and Verilog modeling of FSM based design – Traffic Light Controller / Vending Machine				4 hours
12.	Design of ALU				4 hours
Total Laboratory Hours					30 hours
Mode of Assessment: Continuous Assessment and Final Assessment Test					
Recommended by Board of Studies		14-05-2022

Course Objectives:					
<ol style="list-style-type: none"> To acquaint students with architectures of Intel microprocessors, microcontroller and ARM processors. To familiarize the students with assembly language programming in 8051 microcontroller and ARM processor. To interface peripherals and I/O devices with the 8051 microcontroller. 					
Course Outcome:					
At the end of the course, the student should be able to					
<ol style="list-style-type: none"> Comprehend the various microprocessors including Intel Pentium Processors Infer the architecture and Programming of Intel 8086 Microprocessor. Comprehend the architectures and programming of 8051 microcontroller. Deploy the implementation of various peripherals such as general purpose input/output, timers, serial communication, LCD, keypad and ADC with 8051 microcontroller Infer the architecture of ARM Processor Develop the simple application using ARM processor. 					
Module:1	Overview of Microprocessors	3 hours			
Introduction to Microprocessors, 8-bit/16-bit Microprocessor, Overview of Intel Pentium, I (i3, i5, i7) Series Processor.					
Module:2	Microprocessor Architecture and Interfacing: Intel x86	8 hours			
16-bit Microprocessor: 8086 - Architecture and Addressing modes, Memory Segmentation, Instruction Set, Assembly Language Processing, Programming with DOS and BIOS function calls, minimum and maximum mode configuration, Programmable Peripheral Interface (8255), Programmable Timer Controller (8254), Memory Interface to 8086.					
Module:3	Microcontroller Architecture: Intel 8051	7 hours			
Microcontroller 8051 - Organization and Architecture, RAM-ROM Organization, Machine Cycle, Instruction set: Addressing modes, Data Processing - Stack, Arithmetic, Logical; Branching – Unconditional and Conditional, Assembly programming.					
Module:4	Microcontroller 8051 Peripherals	5 hours			
I/O Ports, Timers-Counters, Serial Communication and Interrupts.					
Module:5	I/O interfacing with Microcontroller 8051	7 hours			
LCD, LED, Keypad, Analog-to-Digital Convertors, Digital-to-Analog Convertors, Sensor with Signal Conditioning Interface.					
Module:6	ARM Processor Architecture	5 hours			
ARM Design Philosophy; Overview of ARM architecture; States [ARM, Thumb, Jazelle]; Registers, Modes; Conditional Execution; Pipelining; Vector Tables; Exception handling.					
Module:7	ARM Instruction Set	8 hours			
ARM Instruction- data processing instructions, branch instructions, load store instructions, SWI Instruction, Loading instructions, conditional Execution, Assembly Programming.					
Module:8	Contemporary issues	2 hours			

		Total Lecture hours:		45 hours

Pre-requisite	NIL	Syllabus Version			
		1.0			
Course Objectives:					
<ol style="list-style-type: none"> To address the challenges of the relevance of lattice theory and algebraic structures to computer science and engineering problems. To use Counting techniques, in particular recurrence relations to computer science problems. To understand the concepts of graph theory and related algorithm concepts. 					
Course Outcomes:					
At the end of this course, students are expected to					
<ol style="list-style-type: none"> Learn proof techniques and concepts of inference theory Use algebraic structures in applications Counting techniques in engineering problems. Use lattice and Boolean algebra properties in Digital circuits. Solve Science and Engineering problems using Graph theory. 					
Module:1	Mathematical Logic	7 hours			
Statements and Notation-Connectives–Tautologies-Equivalence - Implications–Normal forms - The Theory of Inference for the Statement Calculus - Predicate Calculus - Inference Theory of the Predicate Calculus					
Module:2	Algebraic Structures	6 hours			
Semigroups and Monoids - Groups – Subgroups – Lagrange’s Theorem Homomorphism – Properties-Group Codes.					
Module:3	Counting Techniques	6 hours			
Basics of counting - Pigeonhole principle - Permutations and combinations - Inclusion-exclusion principle - Recurrence relations - Solving recurrence relations - Generating functions-Solution to recurrence relations.					
Module:4	Lattices and Boolean algebra	6 hours			
Partially Ordered Relations -Lattices as Posets – Hasse Digram – Properties of Lattices – Boolean algebra-Properties of Boolean Algebra-Boolean functions.					
Module:5	Fundamentals of Graphs	6 hours			
Basic Concepts of Graph Theory – Planar and Complete graph - Matrix representation of Graphs – Graph Isomorphism – Connectivity–Cut sets-Euler and Hamilton Paths–Shortest Path algorithms					
Module:6	Trees, Fundamental circuits, Cut sets	6 hours			
Trees – properties of trees – distance and centres in tree – Spanning trees – Spanning tree algorithms- Tree traversals- Fundamental circuits and cut-sets					
Module:7	Graph colouring, covering, Partitioning	6 hours			
Bipartite graphs - Chromatic number – Chromatic partitioning – Chromatic polynomial - matching – Covering– Four Colour problem.					
Module:8	Contemporary Issues	2 hours			
Total Lecture hours:					45 hours
Total Tutorial hours:					15 hours

		1.0			
Course Objectives					
<ol style="list-style-type: none"> To impart basic concepts of data structures and algorithms. To differentiate linear, non-linear data structures and their operations. To comprehend the necessity of time complexity in algorithms. 					
Course Outcomes					
On completion of this course, students should be able to:					
<ol style="list-style-type: none"> Understand the fundamental analysis and time complexity for a given problem. Articulate linear, non-linear data structures and legal operations permitted on them. Identify and apply suitable algorithms for searching and sorting. Discover various tree and graph traversals. Explicate hashing, heaps and AVL trees and realize their applications. 					
Module:1		Algorithm Analysis			8 hours
Importance of algorithms and data structures - Fundamentals of algorithm analysis: Space and time complexity of an algorithm, Types of asymptotic notations and orders of growth - Algorithm efficiency – best case, worst case, average case - Analysis of non-recursive and recursive algorithms - Asymptotic analysis for recurrence relation: Iteration Method, Substitution Method, Master Method and Recursive Tree Method.					
Module:2		Linear Data Structures			7 hours
Arrays: 1D and 2D array- Stack - Applications of stack: Expression Evaluation, Conversion of Infix to postfix and prefix expression, Tower of Hanoi – Queue - Types of Queue: Circular Queue, Double Ended Queue (deQueue) - Applications – List: Singly linked lists, Doubly linked lists, Circular linked lists- Applications: Polynomial Manipulation.					
Module:3		Searching and Sorting			7 hours
Searching: Linear Search and binary search – Applications. Sorting: Insertion sort, Selection sort, Bubble sort, Counting sort, Quick sort, Merge sort - Analysis of sorting algorithms.					
Module:4		Trees			6 hours
Introduction - Binary Tree: Definition and Properties - Tree Traversals- Expression Trees:- Binary Search Trees - Operations in BST: insertion, deletion, finding min and max, finding the k th minimum element.					
Module:5		Graphs			6 hours
Terminology – Representation of Graph – Graph Traversal: Breadth First Search (BFS), Depth First Search (DFS) - Minimum Spanning Tree: Prim's, Kruskal's - Single Source Shortest Path: Dijkstra's Algorithm.					
Module:6		Hashing			4 hours
Hash functions - Separate chaining - Open hashing: Linear probing, Quadratic probing, Double hashing - Closed hashing - Random probing – Rehashing - Extendible hashing.					
Module:7		Heaps and AVL Trees			5 hours
Heaps - Heap sort- Applications -Priority Queue using Heaps. AVL trees: Terminology, basic operations (rotation, insertion and deletion).					
Module:8		Contemporary Issues			2 hours
Total Lecture hours:					45 hours

Course Objectives					
<ol style="list-style-type: none"> To convey the Internet and Its Application in Real world. To introduce the fundamentals of web programming through HTML and CSS. To establish the application of Javascript in designing interactive web pages. To investigate various elements of ReactJS and design user interfaces to deploy in the real time. 					
Course Outcomes					
At the end of this course students will be able to:					
<ol style="list-style-type: none"> Apply various elements of HTML and CSS. Design interactive web pages using JavaScript. Create Dynamic Web Applications using ReactJS. Deploy and host web applications in Local Servers or Cloud platforms. 					
Module:1	Introduction	2 hours			
World wide web and its evolution - E-mail, Telnet, FTP, E-commerce, Cloud Computing, Video conferencing - Internet service providers, IP Address, URL, Domain Name Servers - Web Browsers, Search Engine -Web Server vs Application Server.					
Module:2	Hypertext Markup Language	2 hours			
HTML Tags, Structure, HTML Coding Conventions - Block Elements, Text Elements, Code-Related Elements, Character References - Lists, Images, section, article, and aside Elements - nav and a Elements - header and footer Elements.					
Module:3	Cascading Style Sheets	2 hours			
CSS Overview - CSS Rules, CSS Syntax and Style - Class Selectors, ID Selectors, span and div Elements - Cascading, style Attribute, style Container, External CSS Files - CSS Properties: Color Properties, Font Properties, line-height Property, Text Properties, Border Properties. Element Box, padding Property, margin Property - Hosting a Website and GIT.					
Module:4	JavaScript	3 hours			
Hello World Web Page - Buttons, Functions, Variables, Identifiers - Assignment Statements and Objects - Document Object Model, Forms: form Element, Controls, Text Control Accessing a Form's Control Values, reset and focus Methods – Event Handler Attributes: onchange, onmouseover, onmouseout.					
Module:5	Advanced JavaScript	2 hours			
While Loop, External JavaScript Files, do Loop, Radio Buttons, Checkboxes, for Loop - fieldset and legend Elements- Manipulating CSS with JavaScript- Using z-index to Stack Elements-Textarea Controls - Pull-Down Menus- List Boxes- Canvas and Drawing - Event Handler and Listener.					
Module:6	ReactJS	2 hours			
React Environment Setup - ReactJS Basics - React JSX - React Components: React Component API - React Component Life Cycle - React Constructors - React Dev Tools - React Native vs ReactJS.					
Module:7	Advanced ReactJS	2 hours			
React Dataflow: React State - React Props - React Props Validation - Styling React - Hooks and Routing - Deploying React - Case Studies for building dynamic web applications.					
Total Lecture hours:					15 hours

Mode of Evaluation: Written Assignment, Quiz.	
Indicative Experiments	
1.	Explore various terminologies related to Internet (ISP, Email, Telnet, FTP, Web browsers, Search Engines)
2.	Experiment the use of basic HTML elements.
3.	Demonstrate the applications of Lists, Tables, Images, Section, article and aside elements.
4.	Investigate the various components of CSS.
5.	Develop web pages using HTML and various elements of CSS.
6.	Designing simple dynamic webpages using Javascript.
7.	Build web pages using While Loop, External JavaScript Files, do Loop, Radio Buttons, Checkboxes, for Loop - fieldset and legend Elements.
8.	Manipulating CSS with JavaScript- Using z-index to Stack Elements-Textarea Controls - Pull-Down Menus- List Boxes- Canvas and Drawing - Event Handler and Listener.
9.	React Environment Setup - ReactJS Basics - React JSX - React Components: React Component API.
10.	Understand React Component Life Cycle and apply React Constructors - React Dev Tools - React Native vs ReactJS.
11.	Envisage React Dataflow: React State - React Props - React Props Validation - Styling React - Hooks and Routing.
12.	Deploying React - Case Studies for building dynamic web applications.

Course Objectives					
1. To provide mathematical foundations for analyzing the complexity of the algorithms 2. To impart the knowledge on various design strategies that can help in solving the real world problems effectively 3. To synthesize efficient algorithms in various engineering design situations					
Course Outcomes					
On completion of this course, student should be able to: 1. Apply the mathematical tools to analyze and derive the running time of the algorithms 2. Demonstrate the major algorithm design paradigms. 3. Explain major graph algorithms, string matching and geometric algorithms along with their analysis. 4. Articulating Randomized Algorithms. 5. Explain the hardness of real-world problems with respect to algorithmic efficiency and learning to cope with it.					
Module:1	Design Paradigms: Greedy, Divide and Conquer Techniques	6 hours			
Overview and Importance of Algorithms - Stages of algorithm development: Describing the problem, Identifying a suitable technique, Design of an algorithm, Derive Time Complexity, Proof of Correctness of the algorithm, Illustration of Design Stages - Greedy techniques: Fractional Knapsack Problem, and Huffman coding - Divide and Conquer: Maximum Subarray, Karatsuba faster integer multiplication algorithm.					
Module:2	Design Paradigms: Dynamic Programming, Backtracking and Branch & Bound Techniques	10 hours			
Dynamic programming: Assembly Line Scheduling, Matrix Chain Multiplication, Longest Common Subsequence, 0-1 Knapsack, TSP- Backtracking: N-Queens problem, Subset Sum, Graph Coloring- Branch & Bound: LIFO-BB and FIFO BB methods: Job Selection problem, 0-1 Knapsack Problem					
Module:3	String Matching Algorithms	5 hours			
Naïve String-matching Algorithms, KMP algorithm, Rabin-Karp Algorithm, Suffix Trees					
Module:4	Graph Algorithms	6 hours			
All pair shortest path: Bellman Ford Algorithm, Floyd-Warshall Algorithm - Network Flows: Flow Networks, Maximum Flows: Ford-Fulkerson, Edmond-Karp, Push Re-label Algorithm – Application of Max Flow to maximum matching problem					
Module:5	Geometric Algorithms	4 hours			
Line Segments: Properties, Intersection, sweeping lines - Convex Hull finding algorithms: Graham's Scan, Jarvis' March Algorithm.					
Module:6	Randomized algorithms	5 hours			
Randomized quick sort - The hiring problem - Finding the global Minimum Cut.					
Module:7	Classes of Complexity and Approximation Algorithms	7 hours			
The Class P - The Class NP - Reducibility and NP-completeness – SAT (Problem Definition and statement), 3SAT, Independent Set, Clique, Approximation Algorithm – Vertex Cover, Set Cover and Travelling salesman					
Module:8	Contemporary Issues	2 hours			
Total Lecture hours:					45 hours

		1.0			
Course Objectives					
<ol style="list-style-type: none"> 1. To acquaint students with the basic concepts of fundamental component, architecture, register organization and performance metrics of a computer and to impart the knowledge of data representation in binary and to understand the implementation of arithmetic algorithms in a typical computer. 2. To teach students how to describe machine capabilities and design an effective data path design for instruction execution. To introduce students to syntax and semantics of machine level programming. 3. To make students understand the importance of memory systems, IO interfacing techniques and external storage and their performance metrics for a typical computer. And explore various alternate techniques for improving the performance of a processor. 					
Course Outcomes					
On completion of this course, student should be able to:					
<ol style="list-style-type: none"> 1. Differentiate Von Neumann, Harvard, and CISC and RISC architectures. Analyze the performance of machine with different capabilities. Recognize different instruction formats and addressing modes. Validate efficient algorithm for fixed point and floating point arithmetic operations. 2. Explain the importance of hierarchical memory organization. Able to construct larger memories. Analyze and suggest efficient cache mapping technique and replacement algorithms for given design requirements. Demonstrate hamming code for error detection and correction. 3. Understand the need for an interface. Compare and contrast memory mapping and IO mapping techniques. Describe and Differentiate different modes of data transfer. Appraise the synchronous and asynchronous bus for performance and arbitration. 4. Assess the performance of IO and external storage systems. Classify parallel machine models. Analyze the pipeline hazards and solutions. 					
Module:1	Introduction To Computer Architecture and Organization	5 Hours			
Overview of Organization and Architecture –Functional components of a computer: Registers and register files - Interconnection of components - Overview of IAS computer function - Organization of the von Neumann machine - Harvard architecture - CISC & RISC Architectures.					
Module:2	Data Representation and Computer Arithmetic	5 Hours			
Algorithms for fixed point arithmetic operations: Multiplication (Booths, Modified Booths), Division (restoring and non-restoring) - Algorithms for floating point arithmetic operations - Representation of nonnumeric data (character codes).					
Module:3	Instruction Sets and Control Unit	9 Hours			
Computer Instructions: Instruction sets, Instruction Set Architecture, Instruction formats, Instruction set categories - Addressing modes - Phases of instruction cycle – ALU - Data-path and control unit: Hardwired control unit and Micro programmed control unit - Performance metrics: Execution time calculation, MIPS, MFLOPS.					
Module:4	Memory System Organization and Architecture	7 Hours			
Memory systems hierarchy: Characteristics, Byte Storage methods, Conceptual view of memory cell - Design of scalable memory using RAM's- ROM's chips - Construction of larger size memories - Memory Interleaving - Memory interface address map- Cache memory: principles, Cache memory management techniques, Types of caches, caches misses, Mean					

memory access time evaluation of cache.			
Module:5	Interfacing and Communication	5 Hours	
I/O fundamentals: handshaking, buffering, I/O Modules - I/O techniques: Programmed I/O, Interrupt-driven I/O, Direct Memory Access, Direct Cache Access - Interrupt structures: Vectored and Prioritized-interrupt overhead - Buses: Synchronous and asynchronous - Arbitration.			
Module:6	Subsystems	5 Hours	
External storage systems: Solid state drivers - Organization and Structure of disk drives: Electronic- magnetic and optical technologies - Reliability of memory systems - Error detecting and error correcting systems - RAID Levels - I/O Performance			
Module:7	High Performance Processors	7 Hours	
Classification of models - Flynn's taxonomy of parallel machine models (SISD, SIMD, MISD, MIMD) - Pipelining: Two stages, Multi stage pipelining, Basic performance issues in pipelining, Hazards, Methods to prevent and resolve hazards and their drawbacks - Approaches to deal branches - Superscalar architecture: Limitations of scalar pipelines, superscalar versus super pipeline architecture, superscalar techniques, performance evaluation of superscalar architecture - performance evaluation of parallel processors: Amdahl's law, speed-up and efficiency.			
Module:8	Contemporary Issues	2 Hours	
		Total Lecture Hours	45 Hours
Text Book(s)			
1	David A. Patterson and John L. Hennessy, Computer Organization and Design -The Hardware / Software Interface 6 th Edition, Morgan Kaufmann, 2020		
Reference Book(s)			
1	Computer Architecture and Organization-Designing for Performance, William Stallings, Tenth edition, Pearson Education series, 2016		
2	Carl Hamacher, Zvonko Vranesic, Safwat Zaky, Computer organization, Mc Graw Hill, Fifth edition, Reprint 2011.		
Mode of Evaluation: CAT, Written Assignments, Quiz and FAT.

BCSE301L	Software Engineering	L	T	P	C
		3	0	0	3
Pre-requisite	NIL	Syllabus version			
		1.0			
Course Objectives					
1. To introduce the essential Software Engineering concepts. 2. To impart concepts and skills for performing analysis, design ,develop, test and evolve efficient software systems of various disciplines and applications 3. To make familiar about engineering practices, standards and metrics for developing software components and products.					
Course Outcomes					
On completion of this course, student should be able to: <ol style="list-style-type: none"> 1. Apply and assess the principles of various process models for the software development. 2. Demonstrate various software project management activities that include planning , Estimations, Risk assessment and Configuration Management 3. Perform Requirements modelling and apply appropriate design and testing heuristics to produce quality software systems. 4. Demonstrate the complete Software life cycle activities from requirements analysis to maintenance using the modern tools and techniques. 5. Escalate the use of various standards and metrics in evaluating the process and product. 					
Module:1	Overview Of Software Engineering	6 hours			
Nature of Software, Software Engineering, Software process, project, product, Process Models Classical Evolutionary models, Introduction to Agility - Agile Process-Extreme programming - XP Process – Principles of Agile Software Development framework - Overview of System Engineering					
Module:2	Introduction To Software Project Management	6 hours			
Planning, Scope, Work break-down structure, Milestones, Deliverables, Cost and Estimates - (Human Resources, Time-scale, Costs), Risk Management, RMMM Plan, CASE TOOLS, Agile Project Management, Managing team dynamics and communication, Metrics and Measurement					
Module:3	Modelling Requirements	8 hours			
Software requirements and its types, Requirements Engineering process, Requirement Elicitation, System Modeling – Requirements Specification and Requirement Validation, Requirements Elicitation techniques, Requirements management in Agile.					
Module:4	Software Design	8 hours			
Design concepts and principles - Abstraction - Refinement - Modularity Cohesion coupling, Architectural design, Detailed Design Transaction Transformation, Refactoring of designs, Object oriented Design User-Interface Design					
Module:5	Validation And Verification	7 hours			
Strategic Approach to Software Testing, Testing Fundamentals Test Plan, Test Design, Test Execution, Reviews, Inspection and Auditing – Regression Testing – Mutation Testing - Object oriented testing - Testing Web based System - Mobile App testing – Mobile test Automation and tools – DevOps Testing – Cloud and Big Data Testing					
Module:6	Software Evolution	4 hours			

Software Maintenance, Types of Maintenance, - Software Configuration Management – Overview – SCM Tools. Re-Engineering, Reverse Engineering, Software Reuse			
Module:7	Quality Assurance	4 hours	
Product and Process Metrics, Quality Standards Models ISO, TQM, Six-Sigma, Process improvement Models: CMM & CMMI. Quality Control and Quality Assurance - Quality Management - Quality Factors - Methods of Quality Management			
Module:8	Contemporary Issues	2 hours	
		Total Lecture hours:	45 hours

Pre-requisite	NIL			Syllabus version			
				1.0			
Course Objectives							
<ol style="list-style-type: none"> 1. To understand the concepts of File system and structure of the database; Designing an Entity-Relationship model for a real-life application and Mapping a database schema from the ER model. 2. To differentiate various normal forms, evaluate relational schemas for design qualities and optimize a query. 3. To impart the working methodologies of transaction management, understand concurrency control, recovery, indexing, access methods and fundamental view on unstructured data and its management. 							
Course Outcomes							
On completion of this course, student should be able to:							
<ol style="list-style-type: none"> 1. Comprehend the role of database management system in an organization and design the structure and operation of the relational data model. 2. Develop a database project depending on the business requirements, considering various design issues. 3. List the concepts of indexing and accessing methods. 4. Explain the concept of a database transaction processing and comprehend the concept of database facilities including concurrency control, backup and recovery. 5. Review the fundamental view on unstructured data and describe other emerging database technologies. 							
Module:1	Database Systems Concepts and Architecture			4 hours			
Need for database systems – Characteristics of Database Approach – Advantages of using DBMS approach - Actors on the Database Management Scene: Database Administrator - Classification of database management systems - Data Models - Schemas and Instances - Three-Schema Architecture - The Database System Environment - Centralized and Client/Server Architectures for DBMSs – Overall Architecture of Database Management Systems							
Module:2	Relational Model and E-R Modeling			6 hours			
Relational Model: Candidate Keys, Primary Keys, Foreign Keys - Integrity Constraints - Handling of Nulls - Entity Relationship Model: Types of Attributes, Relationships, Structural Constraints, Relational model Constraints – Mapping ER model to a relational schema – Extended ER Model - Generalization – Specialization – Aggregations.							
Module:3	Relational Database Design			6 hours			
Database Design – Schema Refinement - Guidelines for Relational Schema - Functional dependencies - Axioms on Functional Dependencies- Normalization: First, Second and Third Normal Forms - Boyce Codd Normal Form, Multi-valued dependency and Fourth Normal form - Join dependency and Fifth Normal form							
Module:4	Physical Database Design and Query Processing			8 hours			
File Organization - Indexing: Single level indexing, multi-level indexing, dynamic multilevel Indexing - B+ Tree Indexing – Hashing Techniques: Static and Dynamic Hashing – Relational Algebra - Translating SQL Queries into Relational Algebra - Query Processing – Query Optimization: Algebraic Query Optimization, Heuristic query optimization Rules, Join Query Optimization using Indexing and Hashing - Tuple Relational Calculus.							
Module:5	Transaction Processing and Recovery			8 hours			

Introduction to Transaction Processing – Transaction concepts: ACID Properties of Transactions, Transaction States - Serial and Serializable Schedules - Schedules based on recoverability – Schedules based on Serializability - Conflict Serializability - Recovery Concepts: Log Based Recovery Protocols, Recovery based on deferred update, Recovery techniques based on immediate update – Shadow Paging Algorithm			
Module:6	Concurrency Control In Transaction Processing	8 hours	
Concurrent Transactions – Lost Update Problem - Concurrency Control Techniques: Time Stamp Based Protocols, Thomas Write Rule, Lock Based Protocols, Lock Compatibility Matrix, - Two-Phase Locking Protocol - Lock Conversions - Graph Based Protocols for Concurrency Control - Tree Protocol for Concurrency Control – Deadlocks Based on Locks in Transactions – Deadlock Handling Techniques – Transaction Deadlock Detection Techniques – Transaction Deadlock Prevention Techniques – Multi-Granularity Locking for avoiding Transaction Deadlocks			
Module:7	NOSQL Database Management	3 hours	
Introduction, Need of NoSQL, CAP Theorem, different NoSQL data bases: Key-value data stores, Columnar families, Document databases, Graph databases			
Module:8	Contemporary Issues	2 Hours	
		Total Lecture hours:	45 hours
Text Book

		3	0	0	3
Pre-requisite	NIL	Syllabus version			
		1.0			
Course Objectives					
<ol style="list-style-type: none"> 1. To introduce the operating system concepts, designs and provide skills required to implement the services. 2. To describe the trade-offs between conflicting objectives in large scale system design. 3. To develop the knowledge for application of the various design issues and services. 					
Course Outcomes					
On completion of this course, student should be able to:					
<ol style="list-style-type: none"> 1. Interpret the evolution of OS functionality, structures, layers and apply various types of system calls of various process states. 2. Design scheduling algorithms to compute and compare various scheduling criteria. 3. Apply and analyze communication between inter process and synchronization techniques. 4. Implement page replacement algorithms, memory management problems and segmentation. 5. Differentiate the file systems for applying different allocation, access technique, representing virtualization and providing protection and security to OS. 					
Module:1	Introduction	3 hours			
Introduction to OS: Functionality of OS - OS design issues - Structuring methods (monolithic, layered, modular, micro-kernel models) - Abstractions, processes, resources - Influence of security, networking, and multimedia.					
Module:2	OS Principles	4 hours			
System calls, System/Application Call Interface – Protection: User/Kernel modes - Interrupts -Processes - Structures (Process Control Block, Ready List etc.), Process creation, management in Unix – Threads: User level, kernel level threads and thread models.					
Module:3	Scheduling	9 hours			
Processes Scheduling - CPU Scheduling: Pre-emptive, non-pre-emptive - Multiprocessor scheduling – Deadlocks - Resource allocation and management - Deadlock handling mechanisms: prevention, avoidance, detection, recovery.					
Module:4	Concurrency	8 hours			
Inter-process communication, Synchronization - Implementing synchronization primitives (Peterson's solution, Bakery algorithm, synchronization hardware) - Semaphores – Classical synchronization problems, Monitors: Solution to Dining Philosophers problem – IPC in Unix, Multiprocessors and Locking - Scalable Locks - Lock-free coordination.					
Module:5	Memory Management	7 hours			
Main memory management, Memory allocation strategies, Virtual memory: Hardware support for virtual memory (caching, TLB) – Paging - Segmentation - Demand Paging - Page Faults - Page Replacement -Thrashing - Working Set.					
Module:6	Virtualization and File System Management	6 hours			
Virtual Machines - Virtualization (Hardware/Software, Server, Service, Network - Hypervisors - Container virtualization - Cost of virtualization - File system interface (access methods, directory structures) - File system implementation (directory implementation, file allocation methods) - File system recovery - Journaling - Soft updates - Log-structured file system - Distributed file system.					
Module:7	Storage Management, Protection and Security	6 hours			
Disk structure and attachment – Disk scheduling algorithms (seek time, rotational latency based)- System threats and security – Policy vs mechanism - Access vs authentication -					

System protection: Access matrix – Capability based systems - OS: performance, scaling, future directions in mobile OS.			
Module:8	Contemporary Issues	2 hours	
Total Lecture hours:			45 hours

Course Objectives						
1. To introduce the operating system concepts, designs and provide skills required to implement the services.						
2. To describe the trade-offs between conflicting objectives in large scale system design.						
3. To develop the knowledge for application of the various design issues and services.						
Course Outcome						
On completion of this course, student should be able to:						
1. Interpret the evolution of OS functionality, structures, layers and apply various types of system calls of various process states.						
2. Design scheduling algorithms to compute and compare various scheduling criteria.						
3. Apply and analyze communication between inter process and synchronization techniques.						
4. Implement page replacement algorithms, memory management problems and segmentation. Differentiate the file systems for applying different allocation, access technique, representing virtualization and providing protection and security to OS.						
Indicative Experiments						
1.	Study of Basic Linux Commands					
2.	Implement your own bootloader program that helps a computer to boot an OS.					
3.	Shell Programming (I/O, Decision making, Looping, Multi-level branching)					
4.	Creating child process using fork () system call, Orphan and Zombie process creation					
5.	Simulation of CPU scheduling algorithms (FCFS, SJF, Priority and Round Robin)					
6.	Implement process synchronization using semaphores / monitors.					
7.	Simulation of Banker s algorithm to check whether the given system is in safe state or not. Also check whether addition resource requested can be granted immediately					
8.	Parallel Thread management using Pthreads library. Implement a data parallelism using multi-threading					
9.	Dynamic memory allocation algorithms - First-fit, Best-fit, Worst-fit algorithms					
10.	Page Replacement Algorithms FIFO, LRU and Optimal					
11.	Implement a file locking mechanism.					
12.	Virtualization Setup: Type-1, Type-2 Hypervisor (Detailed Study Report)

BCSE304L	Theory of Computation			L	T	P	C
				3	0	0	3
Pre-requisite	Nil			Syllabus version			
				1.0			
Course Objectives							
1. Types of grammars and models of automata. 2. Limitation of computation: What can be and what cannot be computed. 3. Establishing connections among grammars, automata and formal languages.							
Course Outcome							
On completion of this course, student should be able to: 1. Compare and analyse different computational models 2. Apply rigorously formal mathematical methods to prove properties of languages, grammars and automata. 3. Identify limitations of some computational models and possible methods of proving them. 4. Represent the abstract concepts mathematically with notations.							
Module:1	Introduction to Languages and Grammars			4 hours			
Recall on Proof techniques in Mathematics - Overview of a Computational Models - Languages and Grammars - Alphabets - Strings - Operations on Languages, Overview on Automata							
Module:2	Finite State Automata			8 hours			
Finite Automata (FA) - Deterministic Finite Automata (DFA) - Non-deterministic Finite Automata (NFA) - NFA with epsilon transitions – NFA without epsilon transition, conversion of NFA to DFA, Equivalence of NFA and DFA – minimization of DFA							
Module:3	Regular Expressions and Languages			7 hours			
Regular Expression - FA and Regular Expressions: FA to regular expression and regular expression to FA - Pattern matching and regular expressions - Regular grammar and FA - Pumping lemma for regular languages - Closure properties of regular languages							
Module:4	Context Free Grammars			7 hours			
Context-Free Grammar (CFG) – Derivations - Parse Trees - Ambiguity in CFG - CYK algorithm – Simplification of CFG – Elimination of Useless symbols, Unit productions, Null productions - Normal forms for CFG: CNF and GNF - Pumping Lemma for CFL - Closure Properties of CFL							
Module:5	Pushdown Automata			5 hours			
Definition of the Pushdown automata - Languages of a Pushdown automata – Power of Non-Deterministic Pushdown Automata and Deterministic pushdown automata							
Module:6	Turing Machine			6 hours			
Turing Machines as acceptor and transducer - Multi head and Multi tape Turing Machines – Universal Turing Machine - The Halting problem - Turing-Church thesis							
Module:7	Recursive and Recursively Enumerable Languages			6 hours			
Recursive and Recursively Enumerable Languages, Language that is not Recursively Enumerable (RE) – computable functions – Chomsky Hierarchy – Undecidable problems - Post's Correspondence Problem							
Module:8	Contemporary Issues			2 hours			
			Total Lecture hours:	45 hours

Pre-requisite	NIL	Syllabus version			
		1.0			
Course Objectives					
<p>1. To expose students to various challenges and constraints of special purpose computing systems in terms of resources and functional requirements.</p> <p>2. To introduce students to various components of typical embedded systems viz., sensors and actuators, data converters, UART etc., their interfacing, programming environment for developing any smart systems and various serial communication protocols for optimal components interfacing and communication.</p> <p>3. To make students understand the importance of program modeling, optimization techniques and debugging tools for product development and explore various solutions for real time scheduling issues in terms of resources and deadline.</p>					
Course Outcomes					
<p>On completion of this course, students should be able to:</p> <ol style="list-style-type: none"> 1. Identify the challenges in designing an embedded system using various microcontrollers and interfaces. 2. To summaries the functionality of any special purpose computing system, and to propose smart solutions to engineering challenges at the prototype level. 3. To examine the working principle and interface of typical embedded system components, create programme models, apply various optimization approaches including simulation environment and demonstration using debugging tools. 4. To evaluate the working principle of serial communication protocols and their proper use, as well as to analyze the benefits and drawbacks of real-time scheduling algorithms and to recommend acceptable solutions for specific challenges. 					
Module:1	Introduction	5 hours			
Overview of Embedded Systems, Design challenges, Embedded processor technology, Hardware Design, Micro-controller architecture -8051, PIC, and ARM.					
Module:2	I/O Interfacing Techniques	8 hours			
Memory interfacing, A/D, D/A, Timers, Watch-dog timer, Counters, Encoder & Decoder, UART, Sensors and actuators interfacing.					
Module:3	Architecture of Special Purpose Computing System	6 hours			
ATM, Handheld devices, Data Compressor, Image Capturing Devices–Architecture and Requirements, Challenges & Constraints of special purpose computing system.					
Module:4	Programming Tools	7 hours			
Evolution of embedded programming tools, Modelling programs, Code optimization, Logic analyzers, Programming environment.					
Module:5	Real Time Operating System	8 hours			
Classification of Real time system, Issues & challenges in RTS, Real time scheduling schemes- EDF-RMS & Hybrid techniques, eCOS, POSIX, Protothreads.					
Module:6	Embedded Networking Protocols	5 hours			
Inter Integrated Circuits (I2C), Controller Area Network, Embedded Ethernet Controller, RS232, Bluetooth, Zigbee, Wifi.					
Module:7	Applications of Embedded Systems	4 hours			
Introduction to embedded system applications using case studies – Role in Agriculture sector, Automotive electronics, Consumer Electronics, Industrial controls, Medical Electronics.					
Module:8	Contemporary Issues	2 hours			

	Total Lecture hours:		45 hours

		3	0	0	3
Pre-requisite	NIL	Syllabus version			
		1.0			
Course Objectives					
<ol style="list-style-type: none"> 1. To impart artificial intelligence principles, techniques and its history. 2. To assess the applicability, strengths, and weaknesses of the basic knowledge representation, problem solving, and learning methods in solving engineering problems 3. To develop intelligent systems by assembling solutions to concrete computational problems 					
Course Outcomes					
On completion of this course, student should be able to:					
<ol style="list-style-type: none"> 1. Evaluate Artificial Intelligence (AI) methods and describe their foundations. 2. Apply basic principles of AI in solutions that require problem-solving, inference, perception, knowledge representation and learning. 3. Demonstrate knowledge of reasoning, uncertainty, and knowledge representation for solving real-world problems 4. Analyse and illustrate how search algorithms play a vital role in problem-solving 					
Module:1	Introduction	6 hours			
Introduction- Evolution of AI, State of Art -Different Types of Artificial Intelligence- Applications of AI-Subfields of AI-Intelligent Agents- Structure of Intelligent Agents- Environments					
Module:2	Problem Solving based on Searching	6 hours			
Introduction to Problem Solving by searching Methods-State Space search, Uninformed Search Methods – Uniform Cost Search, Breadth First Search- Depth First Search-Depth-limited search, Iterative deepening depth-first, Informed Search Methods- Best First Search, A* Search					
Module 3	Local Search and Adversarial Search	5 hours			
Local Search algorithms – Hill-climbing search, Simulated annealing, Genetic Algorithm, Adversarial Search: Game Trees and Minimax Evaluation, Elementary two-players games: tic-tac-toe, Minimax with Alpha-Beta Pruning.					
Module:4	Logic and Reasoning	8 hours			
Introduction to Logic and Reasoning -Propositional Logic-First Order Logic-Inference in First Order Logic- Unification, Forward Chaining, Backward Chaining, Resolution.					
Module:5	Uncertain Knowledge and Reasoning	5 hours			
Quantifying Uncertainty- Bayes Rule -Bayesian Belief Network- Approximate Inference in Bayesian networks					
Module:6	Planning	7 hours			
Classical planning, Planning as State-space search, Forward search, backward search, Planning graphs, Hierarchical Planning, Planning and acting in Nondeterministic domains – Sensor-less Planning, Multiagent planning					
Module:7	Communicating, Perceiving and Acting	6 hours			
Communication-Fundamentals of Language -Probabilistic Language Processing -Information Retrieval- Information Extraction-Perception-Image Formation- Object Recognition.					
Module:8	Contemporary Issues	2 hours			
Total Lecture hours:					45 hours

				3	0	0	3
Pre-requisite	NIL			Syllabus version			
				1.0			
Course Objectives							
<ol style="list-style-type: none"> 1. To provide fundamental knowledge of various language translators. 2. To make students familiar with lexical analysis and parsing techniques. 3. To understand the various actions carried out in semantic analysis. 4. To make the students get familiar with how the intermediate code is generated. 5. To understand the principles of code optimization techniques and code generation. 6. To provide foundation for study of high-performance compiler design. 							
Course Outcomes							
<ol style="list-style-type: none"> 1. Apply the skills on devising, selecting, and using tools and techniques towards compiler design 2. Develop language specifications using context free grammars (CFG). 3. Apply the ideas, the techniques, and the knowledge acquired for the purpose of developing software systems. 4. Constructing symbol tables and generating intermediate code. 5. Obtain insights on compiler optimization and code generation. 							
Module:1 INTRODUCTION TO COMPILATION AND LEXICAL ANALYSIS 7 hours							
Introduction to LLVM - Structure and Phases of a Compiler-Design Issues-Patterns-Lexemes-Tokens-Attributes-Specification of Tokens-Extended Regular Expression- Regular expression to Deterministic Finite Automata (Direct method) - Lex - A Lexical Analyzer Generator.							
Module:2 SYNTAX ANALYSIS 8 hours							
Role of Parser- Parse Tree - Elimination of Ambiguity – Top Down Parsing - Recursive Descent Parsing - LL (1) Grammars – Shift Reduce Parsers- Operator Precedence Parsing - LR Parsers, Construction of SLR Parser Tables and Parsing- CLR Parsing- LALR Parsing.							
Module:3 SEMANTICS ANALYSIS 5 hours							
Syntax Directed Definition – Evaluation Order - Applications of Syntax Directed Translation - Syntax Directed Translation Schemes - Implementation of L-attributed Syntax Directed Definition.							
Module:4 INTERMEDIATE CODE GENERATION 5 hours							
Variants of Syntax trees - Three Address Code- Types – Declarations - Procedures - Assignment Statements - Translation of Expressions - Control Flow - Back Patching- Switch Case Statements.							
Module:5 CODE OPTIMIZATION 6 hours							
Loop optimizations- Principal Sources of Optimization -Introduction to Data Flow Analysis - Basic Blocks - Optimization of Basic Blocks - Peephole Optimization- The DAG Representation of Basic Blocks -Loops in Flow Graphs - Machine Independent Optimization- Implementation of a naïve code generator for a virtual Machine- Security checking of virtual machine code.							
Module:6 CODE GENERATION 5 hours							
Issues in the design of a code generator- Target Machine- Next-Use Information - Register Allocation and Assignment- Runtime Organization- Activation Records.							
Module:7 PARALLELISM 7 hours							
Parallelization- Automatic Parallelization- Optimizations for Cache Locality and Vectorization- Domain Specific Languages-Compilation- Instruction Scheduling and Software Pipelining- Impact of Language Design and Architecture Evolution on Compilers- Static Single Assignment							
Module:8 Contemporary Issues 2 hours							

	Total Lecture hours:		45 hours
Text Book(s)

BCSE307P	Compiler Design Lab			L	T	P	C
				0	0	2	1
Pre-requisite				Syllabus version			
				1.0			
Course Objectives							
<ol style="list-style-type: none"> 1. To provide fundamental knowledge of various language translators. 2. To make students familiar with phases of compiler. 3. To provide foundation for study of high-performance compiler design. 							
Course Outcome							
<ol style="list-style-type: none"> 1. Apply the skills on devising, selecting and using tools and techniques towards compiler design 2. Develop language specifications using context free grammars (CFG). 3. Apply the ideas, the techniques, and the knowledge acquired for the purpose of developing software systems. 4. Constructing symbol tables and generating intermediate code. 5. Obtain insights on compiler optimization and code generation. 							
Indicative Experiments							
1.	Implementation of LEXR using LLVM.						
2.	Implementation of handwritten parser using LLVM						
3.	Generating code with the LLVM backend.						
4.	Defining a real programming language.						
5.	Write a recursive descent parser for the CFG language and implement it using LLVM.						
6.	Write a LR parser for the CFG language and implement it in the using LLVM.						
7.	Intro to Flex and Bison Modify the scanner and parser so that terminating a statement with ";" b" instead of ";" results in the output being printed in binary.						
8.	Using LLVM-style RTTI for the AST and Generating IR from the AST.						
9.	Converting types from an AST description to LLVM types.						
10.	Emitting assembler text and object code.						
						Total Laboratory Hours	30 hours
Mode of assessment: CAT, FAT							
Text Book(s)							
1	Learn LLVM 12: A beginner's guide to learning LLVM compiler tools and core libraries with C++

BCSE308L	Computer Networks	L	T	P	C
		3	0	0	3
Pre-requisite	NIL	Syllabus version			
		1.0			
Course Objectives					
<ol style="list-style-type: none"> 1. To build an understanding among students about the fundamental concepts of computer networking, protocols, architectures, and applications. 2. To help students to acquire knowledge in design, implement and analyze performance of OSI and TCP-IP based Architectures. 3. To identify the suitable application layer protocols for specific applications and its respective security mechanisms. 					
Course Outcomes					
On completion of this course, student should be able to:					
<ol style="list-style-type: none"> 1. Interpret the different building blocks of Communication network and its architecture. 2. Contrast different types of switching networks and analyze the performance of network 3. Identify and analyze error and flow control mechanisms in data link layer. 4. Design sub-netting and analyze the performance of network layer with various routing protocols. 5. Compare various congestion control mechanisms and identify appropriate transport layer protocol for real time applications with appropriate security mechanism. 					
Module:1	Networking Principles and Layered Architecture	6 hours			
Data Communications and Networking: A Communications Model – Data Communications - Evolution of network, Requirements , Applications, Network Topology (Line configuration, Data Flow), Protocols and Standards, Network Models (OSI, TCP/IP)					
Module:2	Circuit and Packet Switching	7 hours			
Switched Communications Networks – Circuit Switching – Packet Switching – Comparison of Circuit Switching and Packet Switching – Implementing Network Software, Networking Parameters(Transmission Impairment, Data Rate and Performance)					
Module:3	Data Link Layer	8 hours			
Error Detection and Correction – Hamming Code , CRC, Checksum- Flow control mechanism – Sliding Window Protocol - GoBack - N - Selective Repeat - Multiple access Aloha - Slotted Aloha - CSMA, CSMA/CD – IEEE Standards(IEEE802.3 (Ethernet), IEEE802.11(WLAN))- RFID- Bluetooth Standards					
Module:4	Network Layer	8 hours			
IPV4 Address Space – Notations – Classful Addressing – Classless Addressing – Network Address Translation – IPv6 Address Structure – IPv4 and IPv6 header format					
Module:5	Routing Protocols	6 hours			
Routing-Link State and Distance Vector Routing Protocols- Implementation-Performance Analysis- Packet Tracer					
Module:6	Transport Layer	5 hours			
TCP and UDP-Congestion Control-Effects of Congestion-Traffic Management-TCP Congestion Control-Congestion Avoidance Mechanisms-Queuing Mechanisms-QoS Parameters					
Module:7	Application layer	3 hours			
Application layer-Domain Name System-Case Study : FTP-HTTP-SMTP-SNMP					
Module:8	Contemporary Issues	2 hours

BCSE309L	Cryptography and Network Security	L	T	P	C
		3	0	0	3
Pre-requisite	NIL	Syllabus version			
		1.0			
Course Objectives					
<ol style="list-style-type: none"> 1. To explore the concepts of basic number theory and cryptographic techniques. 2. To impart concept of Hash and Message Authentication, Digital Signatures and authentication protocols. 3. To reveal the basics of transport layer security, Web Security and various types of System Security. 					
Course Outcomes					
On completion of this course, students should be able to:					
<ol style="list-style-type: none"> 1. To know the fundamental mathematical concepts related to security. 2. To understand concept of various cryptographic techniques. 3. To apprehend the authentication and integrity process of data for various applications 4. To know fundamentals of Transport layer security, web security, E-Mail Security and IP Security 					
Module:1	Fundamentals of Number Theory	5 hours			
Finite Fields and Number Theory: Modular arithmetic, Euclidian Algorithm, Primality Testing: Fermats and Eulers theorem, Chinese Remainder theorem, Discrete Logarithms.					
Module:2	Symmetric Encryption Algorithms	7 hours			
Symmetric key cryptographic techniques: Introduction to Stream cipher, Block cipher: DES, AES,IDEA, Block Cipher Operation, Random Bit Generation and RC4					
Module:3	Asymmetric Encryption Algorithm and Key Exchange	8 hours			
Asymmetric key cryptographic techniques: principles, RSA, ElGamal, Elliptic Curve cryptography, Homomorphic Encryption and Secret Sharing, Key distribution and Key exchange protocols, Diffie-Hellman Key Exchange, Man-in-the-Middle Attack					
Module:4	Message Digest and Hash Functions	5 hours			
Requirements for Hash Functions, Security of Hash Functions, Message Digest (MD5), Secure Hash Function (SHA), Birthday Attack, HMAC					
Module:5	Digital Signature and Authentication Protocols	7 hours			
Authentication Requirements, Authentication Functions, Message Authentication Codes, Digital Signature Authentication, Authentication Protocols, Digital Signature Standards, RSA Digital Signature, Elgamal based Digital Signature, Authentication Applications: Kerberos, X.509 Authentication Service, Public Key Infrastructure (PKI)					
Module:6	Transport Layer Security and IP Security	4 hours			
Transport-Layer Security, Secure Socket Layer(SSL),TLS, IP Security: Overview: IP Security Architecture, Encapsulating Payload Security					
Module:7	E-mail, Web and System Security	7 hours			
Electronic Mail Security, Pretty Good Privacy (PGP), S/MIME, Web Security: Web Security Considerations, Secure Electronic Transaction Protocol Intruders, Intrusion Detection, Password Management, Firewalls: Firewall Design Principles, Trusted Systems.					
Module:8	Contemporary Issues	2 hours			
Total Lecture hours:					45 hours

		1.0			
Course Objectives					
<ol style="list-style-type: none"> 1. Understand various Private and Public Key cryptographic algorithms. 2. To learn about hash functions and digital signature algorithms 3. Acquire knowledge in various network security models 					
Course Outcome					
On completion of this course, students should be able to:					
<ol style="list-style-type: none"> 1. Implement various cipher techniques without using standard cryptographic library functions 2. Develop the various hash functions and digital signature algorithms for different applications 3. Develop various secured networking-based application 					
Indicative Experiments					
1.	Consider a sender and receiver who need to exchange data confidentially using symmetric encryption. Write program that implements DES encryption and decryption using a 64 bit key size and 64 bit block size				
2.	Consider a sender and receiver who need to exchange data confidentially using symmetric encryption. Write program that implements AES encryption and decryption using a 64/128/256 bits key size and 64 bit block size.				
3	Develop an chipper scheme by using RSA				
4.	Develop a MD5 hash algorithm that finds the Message Authentication Code (MAC)				
5	Find a Message Authentication Code (MAC) for given variable size message by using SHA-128 and SHA-256 Hash algorithm Measure the Time consumptions for varying message size for both SHA-128 and SHA-256.				
6	Develop the Digital Siganture standard(DSS)for verifying the legal communicating parties				
7	Design a Diffie Hellman multiparty key exchange protocol and perform Man-in-the-Middle Attack.				
8	Develop a simple client and server application using SSL socket communication				
9	Develop a simple client server model using telnet and capture the packets transmitted with tshark Analyze the pcap file and get the transmitted data (plain text) using any packet capturing library. Implement the above scenario using SSH and observe the data				
10	Develop a web application that implements JSON web token

Course Objectives					
<ol style="list-style-type: none"> 1. To impart knowledge on the infrastructure, sensor technologies and networking technologies of Internet of Things. 2. To analyze, design and develop solutions for Internet of Things. 3. To explore the real-life aspects of Internet of Things. 					
Course Outcomes					
At the end of this course, student will be able to:					
<ol style="list-style-type: none"> 1. Identify the hardware and software components, challenges of Internet of Things. 2. Assess different Internet of Things technologies and their applications. 3. Design basic circuits using sensors interfacing, data conversion process and shield libraries to interface with the real world. 4. Build and demonstrate the project successfully by sensor requirements, coding, emulating and testing. 					
Module:1 IoT Fundamentals					
				5 hours	
Definition and Characteristics of Internet of Things (IoT) - Challenges and Issues - Physical Design of IoT - Logical Design of IoT - IoT Functional Blocks.					
Module:2 IoT Communication Architectures and Protocols					
				7 hours	
Control Units – Communication modules – Bluetooth – Zigbee – WiFi – GPS - IoT Protocols (IPv6, 6LoWPAN, RPL, CoAP) – MQTT - Wired Communication - Power Sources.					
Module:3 Technologies Behind IoT					
				5 hours	
Four pillars of IoT paradigm: RFID, Wireless Sensor Networks, Supervisory Control and Data Acquisition (SCADA) - M2M - IoT Enabling Technologies: BigData Analytics, Cloud Computing, Embedded Systems.					
Module:4 Programming the Microcontroller for IoT					
				5 hours	
Working principles of sensors – IoT deployment for Raspberry Pi /Arduino/Equivalent platform – Reading from Sensors, Communication: Connecting microcontroller with mobile devices - Communication through Bluetooth - WiFi and USB - Contiki OS - Cooja Simulator.					
Module:5 Resource Management in IoT					
				5 hours	
Scalability: Network Configuration Protocol, Open vSwitch Database Management Protocol - Routing and Protocols: Collection Tree, LOADng.					
Module:6 IoT to Web of Things					
				9 hours	
Scope of Web of Things (WoT) – IoT Data Management: Set up cloud environment, Cloud access from sensors, Data Analytics Platforms for IOT- Resource Identification: Richardson Maturity Model - REST API.					
Module:7 Applications of IoT					
				7 hours	
Business models for IoT - Green energy buildings and infrastructure - Smart farming - Smart retailing and Smart fleet management					
Module:8 Contemporary Issues					
				2 hours	
				Total Lecture hours:	
				45 hours

BCSE311L	Sensors and Actuator Devices	L	T	P	C
		2	0	0	2
Pre-requisite	NIL	Syllabus version			
		1.0			
Course Objectives					
<ol style="list-style-type: none"> 1. To create a conceptual understanding of the basic principles of sensors, actuators, and their operations 2. To analyze the real-world problems and provide solutions using sensors and actuators 3. To promote awareness regarding recent developments in the fields of sensors and actuators 					
Course Outcomes					
<p>At the end of this course, student will be able to:</p> <ol style="list-style-type: none"> 1. Classify different Sensors & Actuators based on various physical phenomena and differentiate their performance characteristics 2. Analyze the working principles of thermal, optical & electric sensors and actuators to interpret their mathematical model 3. Interpret the functional principles of magnetic, thermal & Chemical sensors and actuators to interpret their mathematical model 4. Select the relevant sensors and actuators to design real-time data acquisition from ambience via case studies 					
Module:1	Overview of Sensors and Actuators	4 hours			
The five senses: vision, hearing, smell, taste, and touch – Definitions: Sensors & Actuators – Overview of Sensor and Actuator classifications – Performance characteristics of Sensors & Actuators: Transfer Function, Range, Span, Input and Output Full Scale, Resolution, and Dynamic Range - Calibration & Reliability					
Module:2	Temperature Sensors and Thermal Actuators	3 hours			
Thermoresistive sensors: Thermistors, Resistance temperature, and silicon resistive sensors – Thermoelectric sensors – Other Temperature sensors: Optical and Acoustical – Thermomechanical Sensors and Actuators – Case study: <i>Breath analyzer</i> using temperature					
Module:3	Optical Sensors and Actuators	4 hours			
Principles of Optics: Optical units – Quantum effects – Quantum-based Optical sensors – Photoelectric sensors – Charge coupled device (CCD) based – Thermal-based Optical sensors – Active infrared (AFIR) sensors – Optical Actuators – Case study: Liquid Level Indicator using Optical Sensors					
Module:4	Electric and Magnetic Sensors and Actuators	4 hours			
Principles of Electric and Magnetic fields: Basic units – The Electric field: Capacitive Sensors & Actuators – Magnetic sensors and actuators – Magnetoresistance – Magnetostrictive Sensors and Actuators – Magnetometers – Magnetic actuators: Voice Coil Actuators, Motors as Actuators & Magnetic Solenoid Actuators and Magnetic Valves – Case Study: Speed sensing and odometer in a car using smart sensors					
Module:5	Mechanical Sensors and Actuators	5 hours			
Definitions and units – Force Sensors: Strain Gauges, Semiconductor Strain Gauges & Tactile Sensors – Accelerometers: Capacitive Accelerometers, Strain Gauge Accelerometers & Magnetic Accelerometers – Pressure Sensors: Mechanical, Piezoresistive, Capacitive & Magnetic – Velocity sensing – Inertial sensors and actuators: Mechanical or Rotor & Optical Gyroscopes – Case study: Tire-pressure monitoring system using smart sensors					
Module:6	Acoustic Sensors and Actuators	3 hours			

Definitions and units – Elastic waves and their properties – Microphones: Carbon, Magnetic, Ribbon and Capacitive Microphones – Piezoelectric effect – Piezoelectric Sensors – Acoustic Actuators: Loudspeakers, Headphones and Buzzers - Magnetic and Piezoelectric –Ultrasonic sensors and actuators – Case Study: Ultrasonic parking system			
Module:7	Chemical Sensors and Actuators		5 hours
Chemical units and Definitions – Electrochemical sensors: Metal Oxide Sensors and Solid Electrolyte Sensors – Potentiometric smart sensors: Glass Membranes, Soluble Inorganic Salt Membrane and Polymer - Immobilized Ionophore Membranes sensors – Thermochemical, Optical, Mass humidity gas sensors – Chemical Actuators: The Catalytic Converter - The Airbag System using smart sensors – Case study: Water quality monitoring system			
Module:8	Contemporary Issues		2 hours
Total Lecture hours:			30 Hours

		1.0			
Course Objectives					
1. To introduce Internet of Things (IoT) environment and its technologies for designing smart systems 2. To explore open-source computer hardware/software platform, development and debugging environment, programming constructs and necessary libraries 3. To learn embedded programming constructs and real time systems					
Course Outcome					
At the end of this course, student will be able to:					
1. Investigate various challenges and explore open source hardware prototyping platforms for designing IoT devices 2. Understand basic circuits, sensors and interfacing, data conversion process and shield libraries to interface with the real world 3. Program SBC by exploring protocols, data conversion process, API and expansion boards for practical IoT devices using Python 4. Learn embedded programming constructs and constraints in real time systems for real world socio-economic problems					
Module:1	IoT Ecosystem	3 hours			
Challenges and Levels of implementation - Enabling Technologies - Overview of Processing Elements and Peripherals					
Module:2	Programming for Prototyping Boards	4 hours			
Environment: Board, IDE, shields – Programming: syntax, variables, types, operators, constructs and functions – Sketch: skeleton, compile and upload, accessing pins – debugging: UART communication protocol and serial library					
Module:3	Interfacing for Prototyping Boards	5 hours			
Circuits: design, wiring, passive components - sensors and actuators: interfacing, read and write - software libraries – shields - interfacing and libraries					
Module:4	Programming for Single Board Computers	4 hours			
Board schematic – setup - configure and use - OS implications: linux - basics, file system and processes - shell CLI – GUI - Programming API's - RPi.GPIO - PWM library to access pins - Tkinter.					
Module:5	Interfacing with Single Board Computers	5 hours			
Networking - Internet Connectivity - Standard Internet Protocols – MQTT – CoAP - Networking Socket Interface - Cloud - Public APIs and SDK's for accessing cloud services - Social Network APIs - Interfacing - sensors and actuators - Pi Camera - Servo - APIs for data conversion.					
Module:6	Embedded Programming and RTOS	4 hours			
MCU – GPIO – WDT - timers/counters - I/O - A/D - D/A – PWM – Interrupts – Memory - serial communication UART - I2C – SPI - Peripheral Interfacing OS – basics – types – tasks – process - threads (POSIX Threads) - thread preemption - Preemptive Task Scheduling Policies - Priority Inversion - Task communication - Task Synchronization issues - racing and deadlock - binary and counting semaphores (Mutex example) - choosing RTOS					
Module:7	Real World Projects	3 hours			
IoT Integrated Primary Health Care - Face Detection by AI - Cloud IoT Systems for Smart Agriculture - Smart Home Gadgets - Autonomous Car Features – speed and horn intensity control					
Module:8	Contemporary Issues	2 hours			
Total Lecture hours:					30 hours

BCSE313L	Fundamentals of Fog and Edge Computing	L	T	P	C
		3	0	0	3
Pre-requisite	NIL	Syllabus version			
		1.0			
Course Objectives					
1. To introduce IoT enabling technologies and its opportunities. 2. To review underlying technologies, limitations, and challenges along with performance metrics and discuss generic conceptual framework in fog computing. 3. To impart the knowledge to log the sensor data and to perform further data analytics.					
Course Outcome					
At the end of this course, student will be able to: 1. Explore technologies behind the communication and management of fogs and edge resources. 2. Learn the techniques for storage and computation in fogs, edges, 5G and clouds. 3. Implement Internet of Everything (IoE) applications through fog computing architecture and use optimization techniques for the same. 4. Analyze the performance and issues of the applications developed using fog and edge architecture.					
Module:1	Internet of Things (IoT) and New Computing Paradigms	6 Hours			
Introduction - Relevant Technologies - Fog and Edge Computing Completing the Cloud - Hierarchy of Fog and Edge Computing - Business Models – Edge Computing Platforms - Opportunities and Challenges					
Module:2	Challenges in Federating Edge Resources	6 Hours			
Introduction - Methodology - Integrated C2F2T Literature by Modeling Technique - Integrated C2F2T Literature by Use - Case Scenarios - Integrated C2F2T Literature by Metrics – Threads - Standards					
Module:3	Orchestration of Network Slices in Fog, Edge, and Clouds	6 Hours			
Introduction – Background - Network Slicing - Network Slicing in Software-Defined Clouds- Network Slicing Management in Edge and Fog - Internet of Vehicles (IoV): Architecture, Protocols and Seven-layer security model architecture for Internet of Vehicles - IoV: Network Models, Challenges and future aspects					
Module:4	Optimization Problems in Fog and Edge Computing	6 Hours			
Preliminaries - The Case for Optimization in Fog Computing-Formal Modeling Framework for Fog Computing – Metrics - Further Quality Attributes - Optimization Opportunities along the Fog Architecture - Optimization Opportunities along the Service Life Cycle - Toward a Taxonomy of Optimization Problems in Fog Computing					
Module:5	Middleware for Fog and Edge Computing	6 Hours			
Need for Fog and Edge Computing Middleware - Design Goals-State-of-the-Art Middleware Infrastructures - System Model - Case Study.					
Module:6	Technologies in Fog Computing	7 Hours			
Fog Data Management - Smart Building - Predictive Analysis with FogTorch - Machine Learning in Fog Computing - Data Analytics in the Fog - Data Analytics in the Fog Architecture.					
Module:7	Applications of Fog and Edge Computing	6 Hours			
Exploiting Fog Computing in Health Monitoring-Smart Surveillance Video Stream Processing at the Edge for Real - Time Human Objects Tracking-Fog Computing Model for Evolving Smart Transportation Applications - Testing Perspectives of Fog - Based IoT Applications - Legal Aspects of Operating IoT Applications in the Fog					

Module:8	Contemporary Issues	2 Hours	
		Total Lecture hours:	45 Hours
Text Book(s)			
1.	Buyya, Rajkumar, and Satish Narayana Srirama, Fog and Edge computing: Principles and Paradigms, 2019, 1st edition, John Wiley & Sons, USA.

BCSE314L	Privacy and Security in IoT	L	T	P	C
		3	0	0	3
Pre-requisite	NIL	Syllabus version			
		1.0			
Course Objectives					
<ol style="list-style-type: none"> 1. To impart knowledge on the state-of-the-art methodologies and Security in Internet of Things (IoT). 2. To understand the Privacy Preservation and Trust Models in Internet of Things (IoT). 3. To study the Internet of Things (IoT) Security protocols and Security framework. 					
Course Outcome					
At the end of this course, student will be able to:					
<ol style="list-style-type: none"> 1. Identify different Internet of Things technologies and their applications. 2. Assess the need for Privacy and security model for the Internet of Things. 3. Explore various Trust Model for IoT and customize real time data for IoT applications. 4. Design security framework and solve IoT security issues. 					
Module:1	Security in IoT	3 hours			
IoT security: Vulnerabilities, Attacks and Countermeasures - Security Engineering for IoT development - IoT security lifecycle.					
Module:2	Network Robustness and Malware Propagation Control in IoT	5 hours			
Network Robustness - Fusion Based Defense Scheme - Sequential Defense Scheme - Location Certificate Based Scheme - Sybil node detection scheme - Formal Modeling and Verification - Sybil Attack Detection in Vehicular Networks - Performance evaluation of various Malware Dynamics Models - Analysis of Attack Vectors on Smart Home Systems.					
Module:3	Blockchain Technology in IoT	7 hours			
Technical Aspects - Integrated Platforms for IoT Enablement - Intersections between IoT and Distributed Ledger - Testing at scale of IoT Blockchain Applications - Access Control Framework for Security and Privacy of IoT - Blockchain Applications in Healthcare.					
Module:4	Privacy Preservation in IoT	8 hours			
Privacy Preservation Data Dissemination: Network Model, Threat Model - Problem formulation and definition - Baseline data dissemination - Spatial Privacy Graph based data dissemination - Experiment Validation - Smart building concept-Privacy Threats in Smart Building - Privacy Preserving Approaches in Smart Building - Smart Meter Privacy Preserving Approaches.					
Module:5	Privacy Protection in IoT	6 hours			
Lightweight and Robust Schemes for Privacy Protection in IoT Applications: One Time Mask Scheme, One Time Permutation Scheme - Mobile Wireless Body Sensor Network - Participatory Sensing					
Module:6	Trust Models for IoT	7 hours			
Trust Model Concepts - Public Key Infrastructures Architecture Components - Public Key Certificate Formats - Design Considerations for Digital Certificates - Public Key Reference Infrastructure for the IoT - Authentication in IoT - Computational Security for IoT.					
Module:7	Security Protocols for IoT Access Networks	7 hours			
Time Based Secure Key Generation - Security Access Algorithm: Unidirectional, Bidirectional Transmission - Cognitive Security - IoT Security Framework - Secure IoT Layers - Secure Communication Links in IoT - Secure Resource Management, Secure IoT Databases.					
Module:8	Contemporary Issues	2 hours			

	Total Lecture hours:		45 hours
Text Book(s)

BCSE315L	Wearable Computing			L	T	P	C
				3	0	0	3
Pre-requisite	NIL	Syllabus version					
		1.0					
Course Objectives							
4. To explore Wearable components and building blocks of Wearable Computing. 5. To enumerate the details of Body Sensor Networks (BSN). 6. To Integrate Wearable and Cloud Computing for BSN applications.							
Course Outcomes							
At the end of this course, student will be able to:							
6. Learn about software, hardware tools, protocols and components required for Wearable Computing. 7. Understand basics of Body Sensor Networks (BSN) and its Programming Framework. 8. Gain Knowledge about Cloud assisted BSN. 9. Learn About the necessary tools required for BSN applications.							
Module:1	Introduction to Wearable Components						5 hours
History - Internet of Things and Wearables - Wearables' Mass Market Enablers - Human Computer Interface and Human Computer Relationship - A Multi Device World.							
Module:2	Building Blocks for Wearable Computing						7 hours
Bluetooth Low Energy (BLE) - Embedded Software Programming - Sensors for Wearables - Android Wear: Notification Settings and Control, Wear Network - Android Wear API: DataItem – DataMapItem – DataMap - Google Fit API: main package - data sub package							
Module:3	Body Sensor Networks						6 hours
Typical m-Health System Architecture - Hardware Architecture of a Sensor Node - Communication Medium - Power Consumption Considerations - Communication Standards - Network Topologies - Commercial Sensor Node Platforms - Bio-physiological Signals and Sensors - BSN Application Domains - Developing BSN Applications - Programming Abstractions - Requirements for BSN Frameworks - BSN Programming Frameworks							
Module:4	Autonomic and Agent-Oriented Body Sensor Networks						7 hours
Task-Oriented Programming in BSNs - SPINE framework - Task-Based Autonomic Architecture - Autonomic Physical Activity Recognition - Agent-Oriented Computing and Wireless Sensor Networks - Mobile Agent Platform for Sun SPOT (MAPS) - Agent- Based Modeling and Implementation of BSNs - Reference Architecture for Collaborative BSNs - C-SPINE: A CBSN Architecture							
Module:5	Integration of Wearable and Cloud Computing						7 hours
Background - Motivations and Challenges- Reference Architecture for Cloud-Assisted BSNs - BodyCloud: A Cloud-based Platform for Community BSN Applications - Engineering Body Cloud Applications - SPINE Based Design Methodology							
Module:6	SPINE-Based Body Sensor Network Applications						6 hours
Introduction – Background - Physical Activity Recognition - Step Counter - Emotion Recognition - Handshake Detection - Physical Rehabilitation							
Module:7	Installing SPINE						5 hours
Introduction - SPINE1.x - Install SPINE 1.x - Use SPINE - Run a Simple Desktop Application Using SPINE1.3 - SPINE Logging Capabilities - SPINE2 - Install SPINE2 - Use the SPINE2 API - Run a Simple Application Using SPINE2							
Module:8	Contemporary Issues						2 hours
				Total Lecture hours:		45 hours	

Text Book(s)

BCSE316L	Design of Smart Cities	L	T	P	C
		3	0	0	3
Pre-requisite	NIL	Syllabus version			
		1.0			
Course Objectives:					
<ol style="list-style-type: none"> 1. To understand the basic concepts of smart cities and their energy sustainability in urban planning. 2. To analyze the security, privacy, and ethics in smart cities planning and development. 3. To perform process control and project management in smart cities. 					
Course Outcome:					
At the end of this course, student will be able to:					
<ol style="list-style-type: none"> 1. Ascertain and describe the basic concepts of smart and sustainable cities. 2. Comprehend the knowledge of urban planning and sustainability in smart cities. 3. Analyze the security issues and challenges of smart cities and their advancements. 4. Incorporate project management, planning, and stack holders in the design and development of smart cities. 5. Investigate the various ICT and data analytics to connect government, urban planners, universities, city developers, and communities. 					
Module:1	Smart City	6 hours			
Smart City - Complexities of Smart Cities - Urban Network - Sensor Network - Role of Urban Networks - Trends in Urban Development - Community Resource Sensing.					
Module:2	Urban Planning	6 hours			
Urban Planning - Databases - Principles of Urban Planning - Data Organization - Role of Planning in Smart Cities - Case Studies.					
Module:3	Energy Sustainability in Smart Cities	6 hours			
Energy - Decision Making - Energy as a catalyst for Sustainable Transformation - Cohesion and efficiency of smart cities.					
Module:4	Security, Privacy and Ethics in Smart Cities	6 hours			
Security challenges in smart cities - Security threats in smart cities - IoT related safety measures for a safer smart city.					
Module:5	Smart Cities Planning and Development	6 hours			
City Planning - Understanding Smart Cities - Dimensions of Smart Cities - Global standards and performance benchmark of smart cities - Financing smart cities development - Governance of smart cities.					
Module:6	Process Control and Stabilization	7 hours			
Structural concept - Specific applications - Structural health monitoring - Process control and stabilization - Internet of Vehicle (IoV) Importance - Applications - Security issues - Perspectives on Intelligent Transport Systems (ITS) - ITS Highway safety perspective - Environmental aspects of ITS.					
Module:7	Project Management in Smart Cities	6 hours			
Case studies on project management of smart cities: web application and mobile based implementation.					
Module:8	Contemporary Issues	2 hours			
Total Lecture hours:					45 hours

BCSE399J	Summer Industrial Internship			L	T	P	C
				0	0	0	1
Pre-requisite	NIL			Syllabus version			
				1.0			
Course Objectives:							
1. The course is designed so as to expose the students to industry environment and to take up on-site assignment as trainees or interns.							
Course Outcome:							
1. Demonstrate professional and ethical responsibility.							
2. Understand the impact of engineering solutions in a global, economic, environmental and societal context.							
3. Develop the ability to engage in research and to involve in life-long learning.							
4. Comprehend contemporary issues.							
Module Content							
Four weeks of work at industry site. Supervised by an expert at the industry.							
Mode of Evaluation: Internship Report, Presentation and Project Review							
Recommended by Board of Studies				09-03-2022

		0	0	0	3
Pre-requisite	NIL	Syllabus version			
		1.0			
Course Objectives:					
To provide sufficient hands-on learning experience related to the design, development and analysis of suitable product / process so as to enhance the technical skill sets in the chosen field.					
Course Outcome:					
<ol style="list-style-type: none"> 1. Demonstrate professional and ethical responsibility. 2. Evaluate evidence to determine and implement best practice. 3. Mentor and support peers to achieve excellence in practice of the discipline. 4. Work in multi-disciplinary teams and provide solutions to problems that arise in multi-disciplinary work. 					
Module Content					
<p>Project may be a theoretical analysis, modeling & simulation, experimentation & analysis, prototype design, fabrication of new equipment, correlation and analysis of data, software development, applied research and any other related activities.</p> <p>Can be individual work or a group project, with a maximum of 3 students.</p> <p>In case of group projects, the individual project report of each student should specify the individual's contribution to the group project.</p> <p>Carried out inside or outside the university, in any relevant industry or research institution.</p> <p>Publications in the peer reviewed journals / International Conferences will be an added advantage.</p>					
Mode of Evaluation: Assessment on the project - project report to be submitted, presentation and project reviews

Pre-requisite	NIL	Syllabus version			
		1.0			
Course Objectives:					
To provide sufficient hands-on learning experience related to the design, development and analysis of suitable product / process so as to enhance the technical skill sets in the chosen field.					
Course Outcome:					
<ol style="list-style-type: none"> 1. Formulate specific problem statements for well-defined real life problems with reasonable assumptions and constraints. 2. Perform literature search and / or patent search in the area of interest. 3. Conduct experiments / Design and Analysis / solution iterations and document the results. 4. Perform error analysis / benchmarking / costing. 5. Synthesize the results and arrive at scientific conclusions / products / solution. 6. Document the results in the form of technical report / presentation. 					
Module Content					
<ol style="list-style-type: none"> 1. Project may be a theoretical analysis, modeling & simulation, experimentation & analysis, prototype design, fabrication of new equipment, correlation and analysis of data, software development, applied research and any other related activities. 2. Project can be for one or two semesters based on the completion of required number of credits as per the academic regulations. 3. Can be individual work or a group project, with a maximum of 3 students. 4. In case of group projects, the individual project report of each student should specify the individual's contribution to the group project. 5. Carried out inside or outside the university, in any relevant industry or research institution. 6. Publications in the peer reviewed journals / International Conferences will be an added advantage. 					
Mode of Evaluation: : Assessment on the project - project report to be submitted, presentation and project reviews.

Bridge Course

BENG101N	Effective English Communication			L	T	P	C
				0	0	4	2
Pre-requisite	Nil			Syllabus Version			
				1.0			
Course Objectives:							
1. To hone LSRW skills for effective communication							
2. To enhance communication skills for future career aspirations							
3. To gain critical communication skills in writing and public speaking							
Course Outcomes:							
1. Write effective sentences using appropriate grammar and vocabulary							
2. Express clearly in everyday conversations with lucid pronunciation							
3. Analyse the given listening inputs for effective comprehension							
4. Apply different reading strategies to various texts and use them appropriately							
Indicative Experiments							
1.	Fundamentals of Grammar: Parts of Speech, Articles, Tenses, Sentence Structure, Types of Sentences, Subject-Verb Agreement Activity: Exercises and worksheets						
2.	Speaking for Self-Expression: Formal Self-Introduction, Expressing Oneself Activity: Self-Introduction, Just a Minute (JAM)						
3.	Basic Listening: Listening to Simple Conversations, Short Speeches/Stories Activity: Gap fill exercises						
4.	Reading Skills: Reading Strategies, Skimming and Scanning Activity: Cloze reading, Reading comprehension, Reading newspaper articles						
5.	Drafting Paragraphs: Keywords Development, Writing Paragraphs using Connectives Activity: Picture and poster interpretation						
6.	Vocabulary Enrichment: Synonyms and Antonyms, Prefixes and Suffixes, Word Formation, One Word Substitution, Frequently used Idioms and Phrases, Homophones and Homonyms Activity: Crossword puzzles and worksheets						
7.	Listening for Pronunciation: Introduction to Phonemes, Listening to Native Speakers, Listening to Various Accents Activity: Listening and imitating, Spell Bee						
8.	Interactive Speaking: Everyday Conversations, Team Interactions, Simulations Activity: Situational role plays						
9.	Email and Letter Writing: Types and Format of Emails and Letters Activity: Official e-mails and letters, personal letters						
10.	Reading for Comprehension: Short Stories by Indian Writers Activity: Summarising, loud reading						
Total Laboratory Hours						60 hours	
Mode of Evaluation: Continuous assessment / FAT / Written assignments / Quiz/ Oral examination / Group activity							
Recommended by Board of Studies				28.06.2021			
Approved by Academic Council				No. 63	Date	23.09.2021	

Non-Graded Core Courses

BCHY102N	Environmental Sciences	L	T	P	C
		0	0	0	2
Pre-requisite	NIL	Syllabus version			
		1.0			
Course Objectives:					
The course is aimed at students to					
<ol style="list-style-type: none"> 1. Understand and appreciate the unity of life in all its forms and their implications of life style on the environment. 2. Identify the different causes for environmental degradation. 3. Analyze individual's contribution to environmental pollution. 4. Evaluate the impact of pollution at the global/local level and find solutions for remediation. 					
Course Outcomes					
At the end of the course, the students will be able to:					
<ol style="list-style-type: none"> 1. Recognize the environmental issues in a problem-oriented, interdisciplinary perspective. 2. Classify the key environmental issues, the science behind those problems and potential solutions. 3. Demonstrate the significance of biodiversity and its preservation. 4. Identify various environmental hazards. 5. Design various methods for the conservation of resources. 6. Formulate action plans for sustainable alternatives that incorporate science, humanity, and social aspects. 					
Module: 1	Environment and Ecosystem	5 hours			
Environment: definition; Earth–life support system. Ecosystem definition, components and types. Key environmental problems, their basic causes and sustainable solutions. Food chain, food web and their significance, Energy flow in ecosystem; Ecological succession-stages involved, primary and secondary succession - hydrarch, mesarch, xerarch.					
Module: 2	Biodiversity	4 hours			
Biodiversity-definition, levels and importance. Species: roles: types: extinct, endemic, endangered and rare species. Hot-spots –Significance, Mega-biodiversity. Threats to biodiversity due to natural and anthropogenic activities, Conservation methods. GM crops-advantages and disadvantages.					
Module: 3	Sustaining Environmental Quality	4 hours			
Environmental hazards: definition, types, causes and solutions: Biological (Malaria, COVID-19), Chemical (BPA, heavy metals), and Nuclear (Chernobyl); Air, water and soil quality management and conservation; Solid waste management methods.					
Module: 4	Clean and Green Energy	5 hours			
Renewable energy resources: Solar energy-thermal and photovoltaic; Hydroelectric energy. Wind energy, Ocean thermal energy; Geothermal energy; Energy from biomass; Hydrogen energy; Solar-hydrogen revolution. Electric and CNG vehicles.					
Module: 5	Environmental Protection Policies	4 hours			
Environmental Protection (EPA) objectives; Air Act, water Act, Forest conservation Act and Wild life protection Act. Environmental Impact Analysis: guidelines, core values. Impact assessment methodologies.					
Module: 6	Sustainable development	4 hours			
Effect of population-urban environmental problems; Population age structure; Sustainable human societies: tools in economics, sustainable development goals SDGs and promoting awareness. Women and child welfare, Women empowerment.					

Module: 7	Global Climate Change	4 hours
Global climate change and green-house effect. Kyoto Protocol-carbon credits, The Paris Agreement, carbon sequestration: definition, types and methodologies. Ozone layer depletion: causes and impacts. Mitigation of ozone layer depletion- Montreal Protocol. Role of Information Technology in environment.		
Total Lecture hours:		30 hours
Assessment: Seminars, Quiz, Case Studies, Final Assessment Test.		
Text Books		
<ol style="list-style-type: none"> 1. G. Tyler Miller and Scott E. Spoolman (2016), Environmental Science, 15th Edition, Cengagelearning. 2. Benny Joseph, (2012), Environmental Science and Engineering, 5th Edition, Tata McGraw Hill Education Private Limited, New Delhi, India.

BCSE101N	Introduction to Engineering			L	T	P	C
				0	0	0	1
Pre-requisite	Nil	Syllabus version					
		1.0					
Course Objective:							
<ul style="list-style-type: none"> To make the student comfortable and get familiarized with the facilities available on campus To make the student aware of the exciting opportunities and usefulness of engineering to society To make the student understand the philosophy of engineering 							
Course Outcome:							
<ul style="list-style-type: none"> To know the infrastructure facilities available on campus To rationally utilize the facilities during their term for their professional growth To appreciate the engineering principles, involve in life-long learning and take up engineering practice as a service to society 							
General Guidelines							
<ol style="list-style-type: none"> Student should observe and involve in the activities during the induction programme. Both general activities and those which are discipline-specific should be included here. Student should get familiarized with the infrastructure facilities available on campus during the general induction, school induction programme and also from the institutional website. Student should attend the lecture by industries, including those on career opportunities, organized by the School and probably involve in 'Do-it-yourself' projects or projects involving reverse-engineering. Activities under 'Do-it-Yourself' will be detailed by the School. Student should prepare a report on the activities and observations, as per the specified format, and submit the same in institutional LMS, VTOP for further evaluation <p>General instruction on formatting: Document to be prepared with the titles given in the template; Arial type with font size of 12 to be used; photographs can be included in the document as per the requirement; 1.5 line spacing to be used.</p>							
Mode of Evaluation: Evaluation of the submitted report and interaction with the students

Approved by Academic Council				No. 63	Date	23.09.2021	

BHUM101N		Ethics and Values		L	T	P	C
				0	0	0	2
Pre-requisite	Nil	Syllabus version					
		1.0					
Course Objectives:							
<ol style="list-style-type: none"> To understand and appreciate the ethical issues faced by an individual in profession, society and polity. To understand the negative health impacts of certain unhealthy behavior. To appreciate the need and importance of physical, emotional health and social health. 							
Expected Course Outcomes:							
<ol style="list-style-type: none"> Students will be able to: Follow sound morals and ethical values scrupulously to prove as good citizens. Understand various social problems and learn to act ethically. Understand the concept of addiction and how it will affect the physical and mental health. Identify ethical concerns in research and intellectual contexts, including academic integrity, use and citation of sources, the objective presentation of data, and the treatment of human subjects. Identify the main typologies, characteristics, activities, actors and forms of cybercrime. 							
Module:1 Being Good and Responsible							
Gandhian values such as truth and non-violence – Comparative analysis on leaders of past and present – Society's interests versus self-interests - Personal Social Responsibility: Helping the needy, charity and serving the society.							
Module:2 Social Issues 1							
Harassment – Types - Prevention of harassment, Violence and Terrorism.							
Module:3 Social Issues 2							
Corruption: Ethical values, causes, impact, laws, prevention – Electoral malpractices; White collar crimes - Tax evasions – Unfair trade practices.							
Module:4 Addiction and Health							
Peer pressure - Alcoholism: Ethical values, causes, impact, laws, prevention – Ill effects of smoking - Prevention of Suicides; Sexual Health: Prevention and impact of pre-marital pregnancy and Sexually Transmitted Diseases.							
Module:5 Drug Abuse							
Abuse of different types of legal and illegal drugs: Ethical values, causes, impact, laws and prevention.							
Module:6 Personal and Professional Ethics							
Dishonesty - Stealing - Malpractices in Examinations – Plagiarism.							
Module:7 Abuse of Technologies							
Hacking and other cyber crimes, Addiction to mobile phone usage, Video games and Social networking websites.							
Total Lecture Hours:						60 hours	
Text Books :

BSSC101N	Essence of Traditional Knowledge	L	T	P	C
		0	0	0	2
Pre-requisite	Nil	Syllabus version			
		1.0			
Course Objectives:					
<ol style="list-style-type: none"> 1. To impart the knowledge on Indian tradition and Culture. 2. To enable the students to acquire the traditional knowledge in different sectors. 3. To analyze and understand the Science, Management and Indian Knowledge System. 					
Course Outcomes:					
<ol style="list-style-type: none"> 1. Familiarize the concept of Traditional Indian Culture and Knowledge. 2. Explore the Indian religion, philosophy and practices. 3. Analyze and understand the Indian Languages, Culture, Literature and Arts. 4. Gives a clear understanding on the Indian perspective of modern scientific world and basic principles of Yoga and holistic health care system of India. 5. Enable knowledge on Legal framework and traditional knowledge. 					
Module:1 Introduction to Traditional Knowledge					
Traditional knowledge: Definition, nature and characteristics, scope and importance, kinds of traditional knowledge, Indigenous Knowledge, characteristics, Traditional knowledge vis-a-vis Indigenous knowledge, Traditional knowledge Vs Western Knowledge.					
Module:2 Culture and Civilization					
Introduction to Culture and Civilization, Culture and Heritage, Characteristics features of Indian Culture, Importance of Culture, Cultural practices in Ancient India, Medieval India and Modern India.					
Module:3 Languages and Literature					
Indian Languages and Literature: the role of Sanskrit, significance of scriptures to current society, Indian philosophies, other Sanskrit literature and literatures of South India.					
Module:4 Religion and Philosophy					
Religion and Philosophy: Religion and Philosophy in ancient India, Religion and Philosophy in Medieval India, Religious Reform Movements in Modern India (selected movements only).					
Module:5 Fine Arts in India					
Indian Painting, Indian handicrafts, Music, divisions of Indian classic music, modern Indian music, Dance and Drama. Science and Technology in India, Development of science in ancient, medieval and modern India. Traditional Medicine – Herbal Healing - Yoga and Pranayama practices.					
Module:6 Traditional Knowledge in different sectors					
Traditional knowledge and engineering, Traditional medicine system, Traditional knowledge in agriculture, Dependence of Traditional Societies on food and healthcare needs; Importance of conservation and sustainable development of environment, Management of biodiversity and Protection of Traditional knowledge.					
Module:7 Legal framework and Traditional Knowledge					
Introduction on Legal framework and Traditional Knowledge: The Scheduled Tribes and Other Traditional Forest Dwellers (Recognition of Forest Rights) Act, 2006, Plant Varieties Protection and Farmer's Rights Act, 2001 (PPVFR Act); The Biological Diversity Act 2002 and Rules 2004, The protection of traditional knowledge bill, 2016.
