**Vellore Institute of Technology**  
(Deemed to be University under section 3 of UGC Act, 1956)

## **School of Computer Science and Engineering**

# **CURRICULUM AND SYLLABI**

**(2023-2024)**

**B. Tech. Computer Science and Engineering**

## **VISION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY**

Transforming life through excellence in education and research.

## **MISSION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY**

**World class Education:** Excellence in education, grounded in ethics and critical thinking, for improvement of life.

**Cutting edge Research:** An innovation ecosystem to extend knowledge and solve critical problems.

**Impactful People:** Happy, accountable, caring and effective workforce and students.

**Rewarding Co-creations:** Active collaboration with national & international industries & universities for productivity and economic development.

**Service to Society:** Service to the region and world through knowledge and compassion.

## **VISION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING**

To be a world-renowned centre of education, research and service in computing and allied domains.

## **MISSION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING**

- To offer computing education programs with the goal that the students become technically competent and develop lifelong learning skill.
- To undertake path-breaking research that creates new computing technologies and solutions for industry and society at large.
- To foster vibrant outreach programs for industry, research organizations, academia and society.

**VIT**<sup>®</sup>  
Vellore Institute of Technology  
(Deemed to be University under section 3 of UGC Act, 1956)

## **B.Tech. Computer Science and Engineering**

### **PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)**

1. Graduates will be engineering practitioners and leaders, who would help solve industry's technological problems.
2. Graduates will be engineering professionals, innovators or entrepreneurs engaged in technology development, technology deployment, or engineering system implementation in industry.
3. Graduates will function in their profession with social awareness and responsibility.
4. Graduates will interact with their peers in other disciplines in industry and society and contribute to the economic growth of the country.
5. Graduates will be successful in pursuing higher studies in engineering or management.
6. Graduates will pursue career paths in teaching or research.

## **B.Tech. Computer Science and Engineering**

### **PROGRAMME OUTCOMES (POs)**

PO\_01: Having an ability to apply mathematics and science in engineering applications.

PO\_02: Having a clear understanding of the subject related concepts and of contemporary issues and apply them to identify, formulate and analyse complex engineering problems.

PO\_03: Having an ability to design a component or a product applying all the relevant standards and with realistic constraints, including public health, safety, culture, society and environment

PO\_04: Having an ability to design and conduct experiments, as well as to analyse and interpret data, and synthesis of information

PO\_05: Having an ability to use techniques, skills, resources and modern engineering and IT tools necessary for engineering practice

PO\_06: Having problem solving ability- to assess social issues (societal, health, safety, legal and cultural) and engineering problems

PO\_07: Having adaptive thinking and adaptability in relation to environmental context and sustainable development

PO\_08: Having a clear understanding of professional and ethical responsibility

PO\_09: Having cross cultural competency exhibited by working as a member or in teams

PO\_10: Having a good working knowledge of communicating in English – communication with engineering community and society

PO\_11: Having a good cognitive load management skills related to project management and finance

PO\_12: Having interest and recognise the need for independent and lifelong learning

**VIT**<sup>®</sup>  
Vellore Institute of Technology  
(Deemed to be University under section 3 of UGC Act, 1956)

## B.Tech. Computer Science and Engineering

### **PROGRAMME SPECIFIC OUTCOMES (PSOs)**

1. Apply computing theory, languages and algorithms, as well as mathematical and statistical models, and the principles of optimization to appropriately formulate and use data analysis.
2. Apply the principles and techniques of database design, administration, and implementation to enhance data collection capabilities and decision-support systems. Ability to critique the role of information and analytics in supporting business processes and functions.
3. Invent and use appropriate models of data analysis, assess the quality of input, derive insight from results, and investigate potential issues. Also to organize big data sets into meaningful structures, incorporating data profiling and quality standards.

## Fountation Core

| BCSE101E  | Computer Programming: Python   | L                       | T | P | C               |
|---|--|-------------------------|---|---|-----------------|
|   |  | 1                       | 0 | 4 | 3               |
| <b>Pre-requisite</b>  | <b>NIL</b>   | <b>Syllabus version</b> |   |   |                 |
|   |  | 1.0                     |   |   |                 |
| <b>Course Objectives</b>  |  |                         |   |   |                 |
| 1. To provide exposure to basic problem-solving techniques using computers.   |  |                         |   |   |                 |
| 2. To inculcate the art of logical thinking abilities and propose novel solutions for real world problems through programming language constructs.  |  |                         |   |   |                 |
| <b>Course Outcome</b>   |  |                         |   |   |                 |
| 1. Classify various algorithmic approaches, categorize the appropriate data representation, and demonstrate various control constructs.   |  |                         |   |   |                 |
| 2. Choose appropriate programming paradigms, interpret and handle data using files to propose solution through reusable modules; idealize the importance of modules and packages.   |  |                         |   |   |                 |
| <b>Module:1</b>   | <b>Introduction to Problem Solving</b>   | <b>1 hour</b>           |   |   |                 |
| Problem Solving: Definition and Steps, Problem Analysis Chart, Developing an Algorithm, Flowchart and Pseudocode.   |  |                         |   |   |                 |
| <b>Module:2</b>   | <b>Python Programming Fundamentals</b>   | <b>2 hours</b>          |   |   |                 |
| Introduction to python – Interactive and Script Mode – Indentation – Comments – Variables – Reserved Words – Data Types – Operators and their precedence – Expressions – Built-in Functions – Importing from Packages.  |  |                         |   |   |                 |
| <b>Module:3</b>   | <b>Control Structures</b>  | <b>2 hours</b>          |   |   |                 |
| Decision Making and Branching: if, if-else, nested if, multi-way if-elif statements – Looping: while loop, for loop – else clauses in loops, nested loops – break, continue and pass statements.  |  |                         |   |   |                 |
| <b>Module:4</b>   | <b>Collections</b>   | <b>3 hours</b>          |   |   |                 |
| Lists: Create, Access, Slicing, Negative indices, List methods, List comprehensions – Tuples: Create, Indexing and slicing, Operations on tuples – Dictionary: Create, add, and replace values, Operations on dictionaries – Sets: Creation and operations.   |  |                         |   |   |                 |
| <b>Module:5</b>   | <b>Strings and Regular Expressions</b>   | <b>2 hours</b>          |   |   |                 |
| Strings: Comparison, Formatting, Slicing, Splitting, Stripping – Regular Expressions: Matching, Search and replace, Patterns.   |  |                         |   |   |                 |
| <b>Module:6</b>   | <b>Functions and Files</b>   | <b>3 hours</b>          |   |   |                 |
| Functions – Parameters and Arguments: Positional arguments, Keyword arguments, Parameters with default values – Local and Global scope of variables – Functions with Arbitrary arguments – Recursive Functions – Lambda Function. Files: Create, Open, Read, Write, Append and Close – tell and seek methods. |  |                         |   |   |                 |
| <b>Module:7</b>   | <b>Modules and Packages</b>  | <b>2 hours</b>          |   |   |                 |
| Built-in modules – User-Defined modules – Overview of Numpy and Pandas packages.  |  |                         |   |   |                 |
| <b>Total Lecture hours:</b>   |  |                         |   |   | <b>15 hours</b> |
| <b>Text Book(s)</b>   |  |                         |   |   |                 |

|   |  | 1.0                     |   |   |   |
| <b>Course Objectives</b>  |  |                         |   |   |   |
| <ol style="list-style-type: none"> <li>1. To impart the basic constructs in structured programming and object-oriented programming paradigms.</li> <li>2. To inculcate the insights and benefits in accessing memory locations by implementing real world problems.</li> <li>3. To help solving real world problems through appropriate programming paradigms.</li> </ol>   |  |                         |   |   |   |
| <b>Course Outcome</b>   |  |                         |   |   |   |
| At the end of the course, students should be able to:   |  |                         |   |   |   |
| <ol style="list-style-type: none"> <li>1. Understand different programming language constructs and decision-making statements; manipulate data as a group.</li> <li>2. Recognize the application of modular programming approach; create user defined data types and idealize the role of pointers.</li> <li>3. Comprehend various elements of object-oriented programming paradigm; propose solutions through inheritance and polymorphism; identify the appropriate data structure for the given problem and devise solution using generic programming techniques.</li> </ol> |  |                         |   |   |   |
| <b>Module:1</b>   | <b>C Programming Fundamentals</b>              | <b>2 hours</b>          |   |   |   |
| Variables - Reserved words – Data Types – Operators – Operator Precedence - Expressions - Type Conversions - I/O statements - Branching and Looping: if, if-else, nested if, if-else ladder, switch statement, goto statement - Loops: for, while and do...while – break and continue statements.   |  |                         |   |   |   |
| <b>Module:2</b>   | <b>Arrays and Functions</b>                    | <b>4 hours</b>          |   |   |   |
| Arrays: One Dimensional array - Two-Dimensional Array – Strings and its operations. User Defined Functions: Declaration – Definition – call by value and call by reference - Types of Functions - Recursive functions - Storage Classes - Scope, Visibility and Lifetime of Variables.  |  |                         |   |   |   |
| <b>Module:3</b>   | <b>Pointers</b>                                | <b>4 hours</b>          |   |   |   |
| Declaration and Access of Pointer Variables, Pointer arithmetic – Dynamic memory allocation – Pointers and arrays - Pointers and functions.   |  |                         |   |   |   |
| <b>Module:4</b>   | <b>Structure and Union</b>                     | <b>2 hours</b>          |   |   |   |
| Declaration, Initialization, Access of Structure Variables - Arrays of Structure - Arrays within Structure - Structure within Structures - Structures and Functions – Pointers to Structure -   |  |                         |   |   |   |
| <b>Module:5</b>   | <b>Overview of Object-Oriented Programming</b> | <b>5 hours</b>          |   |   |   |
| Features of OOP - Classes and Objects - “this” pointer - Constructors and Destructors - Static Data Members, Static Member Functions and Objects - Inline Functions – Call by reference - Functions with default Arguments - Functions with Objects as Arguments - Friend Functions and Friend Classes.   |  |                         |   |   |   |
| <b>Module:6</b>   | <b>Inheritance</b>                             | <b>5 hours</b>          |   |   |   |
| Inheritance - Types of Inheritance: Single inheritance, Multiple Inheritance, Multi-level   |  |                         |   |   |   |

|   |   |                             |                 |
|---|---|-----------------------------|-----------------|
| Inheritance, Hierarchical Inheritance - Multipath Inheritance - Inheritance and constructors.                                       |   |                             |                 |
| <b>Module:7 Polymorphism</b>  |   | <b>4 hours</b>              |                 |
| Function Overloading - Operator Overloading – Dynamic Polymorphism - Virtual Functions - Pure virtual Functions - Abstract Classes. |   |                             |                 |
| <b>Module:8 Generic Programming</b>   |   | <b>4 hours</b>              |                 |
| Function templates and class templates, Standard Template Library.  |   |                             |                 |
|   |   | <b>Total Lecture hours:</b> | <b>30 hours</b> |

| At the end of this course, students should be able to:   |  |                         |   |   |                 |
| <ol style="list-style-type: none"> <li>1. Understand basic programming constructs; realize the fundamentals of Object Orientated Programming in Java; apply inheritance and interface concepts for enhancing code reusability.</li> <li>2. Realize the exception handling mechanism; process data within files and use the data structures in the collection framework for solving real world problems.</li> </ol> |  |                         |   |   |                 |
| <b>Module:1</b>  | <b>Java Basics</b>   | <b>2 hours</b>          |   |   |                 |
| OOP Paradigm - Features of Java Language - JVM - Bytecode - Java program structure – Basic programming constructs - data types - variables – Java naming conventions – operators.  |  |                         |   |   |                 |
| <b>Module:2</b>  | <b>Looping Constructs and Arrays</b>   | <b>2 hours</b>          |   |   |                 |
| Control and looping constructs - Arrays – one dimensional and multi-dimensional – enhanced for loop – Strings - Wrapper classes.   |  |                         |   |   |                 |
| <b>Module:3</b>  | <b>Classes and Objects</b>   | <b>2 hours</b>          |   |   |                 |
| Class Fundamentals – Access and non-access specifiers - Declaring objects and assigning object reference variables – array of objects – constructors and destructors – usage of “this” and “static” keywords.  |  |                         |   |   |                 |
| <b>Module:4</b>  | <b>Inheritance and Polymorphism</b>  | <b>3 hours</b>          |   |   |                 |
| Inheritance – types – use of “super” – final keyword - Polymorphism – Overloading and Overriding - abstract class – Interfaces.  |  |                         |   |   |                 |
| <b>Module:5</b>  | <b>Packages and Exception Handling</b>   | <b>2 hours</b>          |   |   |                 |
| Packages: Creating and Accessing - Sub packages.<br>Exception Handling - Types of Exception - Control Flow in Exceptions - Use of try, catch, finally, throw, throws in Exception Handling - User defined exceptions.  |  |                         |   |   |                 |
| <b>Module:6</b>  | <b>IO Streams and Files</b>  | <b>2 hours</b>          |   |   |                 |
| Java I/O streams – FileInputStream & FileOutputStream – FileReader & FileWriter-DataInputStream & DataOutputStream – BufferedInputStream & BufferedOutputStream – PrintOutputStream - Serialization and Deserialization.   |  |                         |   |   |                 |
| <b>Module:7</b>  | <b>Collection Framework</b>  | <b>2 hours</b>          |   |   |                 |
| Generic classes and methods - Collection framework: List and Map.  |  |                         |   |   |                 |
| <b>Total Lecture hours:</b>  |  |                         |   |   | <b>15 hours</b> |
| <b>Text Book(s)</b>  |  |                         |   |   |                 |

| <b>Course Objectives</b>  |   |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. Provide an understanding of Boolean algebra and logic functions.</li> <li>2. Develop the knowledge of combinational and sequential logic circuit design.</li> <li>3. Design and model the data path circuits for digital systems.</li> <li>4. Establish a strong understanding of programmable logic.</li> <li>5. Enable the student to design and model the logic circuits using Verilog HDL.</li> </ol>   |   |                  |   |   |   |
| <b>Course Outcome</b>   |   |                  |   |   |   |
| At the end of the course the student will be able to  |   |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. Optimize the logic functions using and Boolean principles and K-map.</li> <li>2. Model the Combinational and Sequential logic circuits using Verilog HDL.</li> <li>3. Design the various combinational logic circuits and data path circuits.</li> <li>4. Analyze and apply the design aspects of sequential logic circuits.</li> <li>5. Analyze and apply the design aspects of Finite state machines.</li> <li>6. Examine the basic architectures of programmable logic devices.</li> </ol> |   |                  |   |   |   |
| <b>Module:1</b>   | <b>Digital Logic</b>                          | <b>8 hours</b>   |   |   |   |
| Boolean Algebra: Basic definitions, Axiomatic definition of Boolean Algebra, Basic Theorems and Properties of Boolean Algebra, Boolean Functions, Canonical and Standard Forms, Simplification of Boolean functions. Gate-Level Minimization: The Map Method (K-map up to 4 variable), Product of Sums and Sum of Products Simplification, NAND and NOR Implementation. Logic Families: Digital Logic Gates, TTL and CMOS logic families.   |   |                  |   |   |   |
| <b>Module:2</b>   | <b>Verilog HDL</b>                            | <b>5 hours</b>   |   |   |   |
| Lexical Conventions, Ports and Modules, Operators, Dataflow Modelling, Gate Level Modelling, Behavioural Modeling, Test Bench.  |   |                  |   |   |   |
| <b>Module:3</b>   | <b>Design of Combinational Logic Circuits</b> | <b>8 hours</b>   |   |   |   |
| Design Procedure, Half Adder, Full Adder, Half Subtractor, Full Subtractor, Decoders, Encoders, Multiplexers, De-multiplexers, Parity generator and checker, Applications of Decoder, Multiplexer and De-multiplexer. Modeling of Combinational logic circuits using Verilog HDL.   |   |                  |   |   |   |
| <b>Module:4</b>   | <b>Design of data path circuits</b>           | <b>6 hours</b>   |   |   |   |
| N-bit Parallel Adder/Subtractor, Carry Look Ahead Adder, Unsigned Array Multiplier, Booth Multiplier, 4-Bit Magnitude comparator. Modeling of data path circuits using Verilog HDL.   |   |                  |   |   |   |
| <b>Module:5</b>   | <b>Design of Sequential Logic Circuits</b>    | <b>8 hours</b>   |   |   |   |
| Latches, Flip-Flops - SR, D, JK & T, Buffer Registers, Shift Registers - SISO, SIPO, PISO, PIPO, Design of synchronous sequential circuits: state table and state diagrams, Design of counters: Modulo-n, Johnson, Ring, Up/Down, Asynchronous counter. Modeling of sequential logic circuits using Verilog HDL.  |   |                  |   |   |   |
| <b>Module:6</b>   | <b>Design of FSM</b>                          | <b>4 hours</b>   |   |   |   |
| Finite state Machine(FSM):Mealy FSM and Moore FSM , Design Example : Sequence detection, Modeling of FSM using Verilog HDL.   |   |                  |   |   |   |
| <b>Module:7</b>   | <b>Programmable Logic Devices</b>             | <b>4 hours</b>   |   |   |   |
| Types of Programmable Logic Devices: PLA, PAL, CPLD, FPGA Generic Architecture.   |   |                  |   |   |   |

|  |   |                |                 |
|--|---|----------------|-----------------|
| <b>Module:8</b>  | <b>Contemporary issues</b>  | <b>2 hours</b> |                 |
|  |   |                |                 |
| <b>Total Lecture hours:</b>  |   |                | <b>45 hours</b> |

| <b>Module:1</b>  | <b>Overview of Microprocessors</b>                            | <b>3 hours</b>   |   |   |   |
| Introduction to Microprocessors, 8-bit/16-bit Microprocessor, Overview of Intel Pentium, I (i3, i5, i7) Series Processor.  |   |                  |   |   |   |
| <b>Module:2</b>  | <b>Microprocessor Architecture and Interfacing: Intel x86</b> | <b>8 hours</b>   |   |   |   |
| 16-bit Microprocessor: 8086 - Architecture and Addressing modes, Memory Segmentation, Instruction Set, Assembly Language Processing, Programming with DOS and BIOS function calls, minimum and maximum mode configuration, Programmable Peripheral Interface (8255), Programmable Timer Controller (8254), Memory Interface to 8086.   |   |                  |   |   |   |
| <b>Module:3</b>  | <b>Microcontroller Architecture: Intel 8051</b>               | <b>7 hours</b>   |   |   |   |
| Microcontroller 8051 - Organization and Architecture, RAM-ROM Organization, Machine Cycle, Instruction set: Addressing modes, Data Processing - Stack, Arithmetic, Logical; Branching – Unconditional and Conditional, Assembly programming.   |   |                  |   |   |   |
| <b>Module:4</b>  | <b>Microcontroller 8051 Peripherals</b>                       | <b>5 hours</b>   |   |   |   |
| I/O Ports, Timers-Counters, Serial Communication and Interrupts.   |   |                  |   |   |   |
| <b>Module:5</b>  | <b>I/O interfacing with Microcontroller 8051</b>              | <b>7 hours</b>   |   |   |   |
| LCD, LED, Keypad, Analog-to-Digital Convertors, Digital-to-Analog Convertors, Sensor with Signal Conditioning Interface.   |   |                  |   |   |   |
| <b>Module:6</b>  | <b>ARM Processor Architecture</b>                             | <b>5 hours</b>   |   |   |   |
| ARM Design Philosophy; Overview of ARM architecture; States [ARM, Thumb, Jazelle]; Registers, Modes; Conditional Execution; Pipelining; Vector Tables; Exception handling.   |   |                  |   |   |   |
| <b>Module:7</b>  | <b>ARM Instruction Set</b>                                    | <b>8 hours</b>   |   |   |   |
| ARM Instruction- data processing instructions, branch instructions, load store instructions, SWI Instruction, Loading instructions, conditional Execution, Assembly Programming.   |   |                  |   |   |   |
| <b>Module:8</b>  | <b>Contemporary issues</b>                                    | <b>2 hours</b>   |   |   |   |

| On completion of this course, students should be able to:   |   |                             |   |                 |   |
| <ol style="list-style-type: none"> <li>Understand the fundamental analysis and time complexity for a given problem.</li> <li>Articulate linear, non-linear data structures and legal operations permitted on them.</li> <li>Identify and apply suitable algorithms for searching and sorting.</li> <li>Discover various tree and graph traversals.</li> <li>Explicate hashing, heaps and AVL trees and realize their applications.</li> </ol> |   |                             |   |                 |   |
| <b>Module:1 Algorithm Analysis</b>  |   | <b>8 hours</b>              |   |                 |   |
| Importance of algorithms and data structures - Fundamentals of algorithm analysis: Space and time complexity of an algorithm, Types of asymptotic notations and orders of growth - Algorithm efficiency – best case, worst case, average case - Analysis of non-recursive and recursive algorithms - Asymptotic analysis for recurrence relation: Iteration Method, Substitution Method, Master Method and Recursive Tree Method.             |   |                             |   |                 |   |
| <b>Module:2 Linear Data Structures</b>  |   | <b>7 hours</b>              |   |                 |   |
| Arrays: 1D and 2D array- Stack - Applications of stack: Expression Evaluation, Conversion of Infix to postfix and prefix expression, Tower of Hanoi – Queue - Types of Queue: Circular Queue, Double Ended Queue (deQueue) - Applications – List: Singly linked lists, Doubly linked lists, Circular linked lists- Applications: Polynomial Manipulation.   |   |                             |   |                 |   |
| <b>Module:3 Searching and Sorting</b>   |   | <b>7 hours</b>              |   |                 |   |
| Searching: Linear Search and binary search – Applications.<br>Sorting: Insertion sort, Selection sort, Bubble sort, Counting sort, Quick sort, Merge sort - Analysis of sorting algorithms.   |   |                             |   |                 |   |
| <b>Module:4 Trees</b>   |   | <b>6 hours</b>              |   |                 |   |
| Introduction - Binary Tree: Definition and Properties - Tree Traversals- Expression Trees:- Binary Search Trees - Operations in BST: insertion, deletion, finding min and max, finding the k <sup>th</sup> minimum element.   |   |                             |   |                 |   |
| <b>Module:5 Graphs</b>  |   | <b>6 hours</b>              |   |                 |   |
| Terminology – Representation of Graph – Graph Traversal: Breadth First Search (BFS), Depth First Search (DFS) - Minimum Spanning Tree: Prim's, Kruskal's - Single Source Shortest Path: Dijkstra's Algorithm.   |   |                             |   |                 |   |
| <b>Module:6 Hashing</b>   |   | <b>4 hours</b>              |   |                 |   |
| Hash functions - Separate chaining - Open hashing: Linear probing, Quadratic probing, Double hashing - Closed hashing - Random probing – Rehashing - Extendible hashing.  |   |                             |   |                 |   |
| <b>Module:7 Heaps and AVL Trees</b>   |   | <b>5 hours</b>              |   |                 |   |
| Heaps - Heap sort- Applications -Priority Queue using Heaps. AVL trees: Terminology, basic operations (rotation, insertion and deletion).   |   |                             |   |                 |   |
| <b>Module:8 Contemporary Issues</b>   |   | <b>2 hours</b>              |   |                 |   |
|   |   | <b>Total Lecture hours:</b> |   | <b>45 hours</b> |   |

| At the end of this course students will be able to:  |   |                  |   |                             |   |
| <ol style="list-style-type: none"> <li>Apply various elements of HTML and CSS.</li> <li>Design interactive web pages using JavaScript.</li> <li>Create Dynamic Web Applications using ReactJS.</li> <li>Deploy and host web applications in Local Servers or Cloud platforms.</li> </ol>   |   |                  |   |                             |   |
| <b>Module:1 Introduction</b>   |   |                  |   |                             |   |
|  |   |                  |   | <b>2 hours</b>              |   |
| World wide web and its evolution - E-mail, Telnet, FTP, E-commerce, Cloud Computing, Video conferencing - Internet service providers, IP Address, URL, Domain Name Servers - Web Browsers, Search Engine -Web Server vs Application Server.  |   |                  |   |                             |   |
| <b>Module:2 Hypertext Markup Language</b>  |   |                  |   |                             |   |
|  |   |                  |   | <b>2 hours</b>              |   |
| HTML Tags, Structure, HTML Coding Conventions - Block Elements, Text Elements, Code-Related Elements, Character References - Lists, Images, section, article, and aside Elements - nav and a Elements - header and footer Elements.  |   |                  |   |                             |   |
| <b>Module:3 Cascading Style Sheets</b>   |   |                  |   |                             |   |
|  |   |                  |   | <b>2 hours</b>              |   |
| CSS Overview - CSS Rules, CSS Syntax and Style - Class Selectors, ID Selectors, span and div Elements - Cascading, style Attribute, style Container, External CSS Files - CSS Properties: Color Properties, Font Properties, line-height Property, Text Properties, Border Properties. Element Box, padding Property, margin Property - Hosting a Website and GIT.                             |   |                  |   |                             |   |
| <b>Module:4 JavaScript</b>   |   |                  |   |                             |   |
|  |   |                  |   | <b>3 hours</b>              |   |
| Hello World Web Page - Buttons, Functions, Variables, Identifiers - Assignment Statements and Objects - Document Object Model, Forms: form Element, Controls, Text Control Accessing a Form's Control Values, reset and focus Methods – Event Handler Attributes: onchange, onmouseover, onmouseout.   |   |                  |   |                             |   |
| <b>Module:5 Advanced JavaScript</b>  |   |                  |   |                             |   |
|  |   |                  |   | <b>2 hours</b>              |   |
| While Loop, External JavaScript Files, do Loop, Radio Buttons, Checkboxes, for Loop - fieldset and legend Elements- Manipulating CSS with JavaScript- Using z-index to Stack Elements-Textarea Controls - Pull-Down Menus- List Boxes- Canvas and Drawing - Event Handler and Listener.  |   |                  |   |                             |   |
| <b>Module:6 ReactJS</b>  |   |                  |   |                             |   |
|  |   |                  |   | <b>2 hours</b>              |   |
| React Environment Setup - ReactJS Basics - React JSX - React Components: React Component API - React Component Life Cycle - React Constructors - React Dev Tools - React Native vs ReactJS.  |   |                  |   |                             |   |
| <b>Module:7 Advanced ReactJS</b>   |   |                  |   |                             |   |
|  |   |                  |   | <b>2 hours</b>              |   |
| React Dataflow: React State - React Props - React Props Validation - Styling React - Hooks and Routing - Deploying React - Case Studies for building dynamic web applications.   |   |                  |   |                             |   |
|  |   |                  |   | <b>Total Lecture hours:</b> |   |
|  |   |                  |   | <b>15 hours</b>             |   |
| <b>Text Book(s)</b>  |   |                  |   |                             |   |

| <b>Indicative Experiments</b>                   |   |
| 1.  | Explore various terminologies related to Internet (ISP, Email, Telnet, FTP, Web browsers, Search Engines)   |
| 2.  | Experiment the use of basic HTML elements.  |
| 3.  | Demonstrate the applications of Lists, Tables, Images, Section, article and aside elements.   |
| 4.  | Investigate the various components of CSS.  |
| 5.  | Develop web pages using HTML and various elements of CSS.   |
| 6.  | Designing simple dynamic webpages using Javascript.   |
| 7.  | Build web pages using While Loop, External JavaScript Files, do Loop, Radio Buttons, Checkboxes, for Loop - fieldset and legend Elements.                           |
| 8.  | Manipulating CSS with JavaScript- Using z-index to Stack Elements-Textarea Controls - Pull-Down Menus- List Boxes- Canvas and Drawing - Event Handler and Listener. |
| 9.  | React Environment Setup - ReactJS Basics - React JSX - React Components: React Component API.   |
| 10.   | Understand React Component Life Cycle and apply React Constructors - React Dev Tools - React Native vs ReactJS.   |
| 11.   | Envisage React Dataflow: React State - React Props - React Props Validation - Styling React - Hooks and Routing.  |
| 12.   | Deploying React - Case Studies for building dynamic web applications.   |

| On completion of this course, student should be able to:<br>1. Apply the mathematical tools to analyze and derive the running time of the algorithms<br>2. Demonstrate the major algorithm design paradigms.<br>3. Explain major graph algorithms, string matching and geometric algorithms along with their analysis.<br>4. Articulating Randomized Algorithms.<br>5. Explain the hardness of real-world problems with respect to algorithmic efficiency and learning to cope with it. |  |                                   |  |                         |   |                 |   |
| <b>Module:1</b>   | <b>Design Paradigms: Greedy, Divide and Conquer Techniques</b>   |                                   |  | <b>6 hours</b>          |   |                 |   |
| Overview and Importance of Algorithms - Stages of algorithm development: Describing the problem, Identifying a suitable technique, Design of an algorithm, Derive Time Complexity, Proof of Correctness of the algorithm, Illustration of Design Stages - Greedy techniques: Fractional Knapsack Problem, and Huffman coding - Divide and Conquer: Maximum Subarray, Karatsuba faster integer multiplication algorithm.   |  |                                   |  |                         |   |                 |   |
| <b>Module:2</b>   | <b>Design Paradigms: Dynamic Programming, Backtracking and Branch &amp; Bound Techniques</b>                           |                                   |  | <b>10 hours</b>         |   |                 |   |
| Dynamic programming: Assembly Line Scheduling, Matrix Chain Multiplication, Longest Common Subsequence, 0-1 Knapsack, TSP- Backtracking: N-Queens problem, Subset Sum, Graph Coloring- Branch & Bound: LIFO-BB and FIFO BB methods: Job Selection problem, 0-1 Knapsack Problem   |  |                                   |  |                         |   |                 |   |
| <b>Module:3</b>   | <b>String Matching Algorithms</b>  |                                   |  | <b>5 hours</b>          |   |                 |   |
| Naïve String-matching Algorithms, KMP algorithm, Rabin-Karp Algorithm, Suffix Trees.  |  |                                   |  |                         |   |                 |   |
| <b>Module:4</b>   | <b>Graph Algorithms</b>  |                                   |  | <b>6 hours</b>          |   |                 |   |
| All pair shortest path: Bellman Ford Algorithm, Floyd-Warshall Algorithm - Network Flows: Flow Networks, Maximum Flows: Ford-Fulkerson, Edmond-Karp, Push Re-label Algorithm – Application of Max Flow to maximum matching problem  |  |                                   |  |                         |   |                 |   |
| <b>Module:5</b>   | <b>Geometric Algorithms</b>  |                                   |  | <b>4 hours</b>          |   |                 |   |
| Line Segments: Properties, Intersection, sweeping lines - Convex Hull finding algorithms: Graham's Scan, Jarvis' March Algorithm.   |  |                                   |  |                         |   |                 |   |
| <b>Module:6</b>   | <b>Randomized algorithms</b>   |                                   |  | <b>5 hours</b>          |   |                 |   |
| Randomized quick sort - The hiring problem - Finding the global Minimum Cut.  |  |                                   |  |                         |   |                 |   |

| Course Objectives  |  |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. To acquaint students with the basic concepts of fundamental component, architecture, register organization and performance metrics of a computer and to impart the knowledge of data representation in binary and to understand the implementation of arithmetic algorithms in a typical computer.</li> <li>2. To teach students how to describe machine capabilities and design an effective data path design for instruction execution. To introduce students to syntax and semantics of machine level programming.</li> <li>3. To make students understand the importance of memory systems, IO interfacing techniques and external storage and their performance metrics for a typical computer. And explore various alternate techniques for improving the performance of a processor.</li> </ol>   |  |                  |   |   |   |
| Course Outcomes  |  |                  |   |   |   |
| <p>On completion of this course, student should be able to:</p> <ol style="list-style-type: none"> <li>1. Differentiate Von Neumann, Harvard, and CISC and RISC architectures. Analyze the performance of machine with different capabilities. Recognize different instruction formats and addressing modes. Validate efficient algorithm for fixed point and floating point arithmetic operations.</li> <li>2. Explain the importance of hierarchical memory organization. Able to construct larger memories. Analyze and suggest efficient cache mapping technique and replacement algorithms for given design requirements. Demonstrate hamming code for error detection and correction.</li> <li>3. Understand the need for an interface. Compare and contrast memory mapping and IO mapping techniques. Describe and Differentiate different modes of data transfer. Appraise the synchronous and asynchronous bus for performance and arbitration.</li> <li>4. Assess the performance of IO and external storage systems. Classify parallel machine models. Analyze the pipeline hazards and solutions.</li> </ol> |  |                  |   |   |   |
| Module:1   | Introduction To Computer Architecture and Organization | 5 Hours          |   |   |   |
| Overview of Organization and Architecture –Functional components of a computer: Registers and register files - Interconnection of components - Overview of IAS computer function - Organization of the von Neumann machine - Harvard architecture - CISC & RISC Architectures.   |  |                  |   |   |   |
| Module:2   | Data Representation and Computer Arithmetic            | 5 Hours          |   |   |   |
| Algorithms for fixed point arithmetic operations: Multiplication (Booths, Modified Booths), Division (restoring and non-restoring) - Algorithms for floating point arithmetic operations - Representation of nonnumeric data (character codes).  |  |                  |   |   |   |
| Module:3   | Instruction Sets and Control Unit                      | 9 Hours          |   |   |   |
| Computer Instructions: Instruction sets, Instruction Set Architecture, Instruction formats, Instruction set categories - Addressing modes - Phases of instruction cycle – ALU - Data-path and control unit: Hardwired control unit and Micro programmed control unit - Performance metrics: Execution time calculation, MIPS, MFLOPS.  |  |                  |   |   |   |
| Module:4   | Memory System Organization and Architecture            | 7 Hours          |   |   |   |
| Memory systems hierarchy: Characteristics, Byte Storage methods, Conceptual view of memory cell - Design of scalable memory using RAM's- ROM's chips - Construction of larger size memories - Memory Interleaving - Memory interface address map- Cache memory: principles, Cache memory management techniques, Types of caches, caches misses, Mean   |  |                  |   |   |   |

|   |   |                |                 |
|---|---|----------------|-----------------|
| memory access time evaluation of cache.   |   |                |                 |
| <b>Module:5</b>   | <b>Interfacing and Communication</b>  | <b>5 Hours</b> |                 |
| I/O fundamentals: handshaking, buffering, I/O Modules - I/O techniques: Programmed I/O, Interrupt-driven I/O, Direct Memory Access, Direct Cache Access - Interrupt structures: Vectored and Prioritized-interrupt overhead - Buses: Synchronous and asynchronous - Arbitration.  |   |                |                 |
| <b>Module:6</b>   | <b>Subsystems</b>   | <b>5 Hours</b> |                 |
| External storage systems: Solid state drivers - Organization and Structure of disk drives: Electronic- magnetic and optical technologies - Reliability of memory systems - Error detecting and error correcting systems - RAID Levels - I/O Performance   |   |                |                 |
| <b>Module:7</b>   | <b>High Performance Processors</b>  | <b>7 Hours</b> |                 |
| Classification of models - Flynn's taxonomy of parallel machine models (SISD, SIMD, MISD, MIMD) - Pipelining: Two stages, Multi stage pipelining, Basic performance issues in pipelining, Hazards, Methods to prevent and resolve hazards and their drawbacks - Approaches to deal branches - Superscalar architecture: Limitations of scalar pipelines, superscalar versus super pipeline architecture, superscalar techniques, performance evaluation of superscalar architecture - performance evaluation of parallel processors: Amdahl's law, speed-up and efficiency. |   |                |                 |
| <b>Module:8</b>   | <b>Contemporary Issues</b>  | <b>2 Hours</b> |                 |
| <b>Total Lecture Hours</b>  |   |                | <b>45 Hours</b> |

| On completion of this course, student should be able to:   |  |  |  |                         |   |   |   |
| <ol style="list-style-type: none"> <li>1. Comprehend the role of database management system in an organization and design the structure and operation of the relational data model.</li> <li>2. Develop a database project depending on the business requirements, considering various design issues.</li> <li>3. List the concepts of indexing and accessing methods.</li> <li>4. Explain the concept of a database transaction processing and comprehend the concept of database facilities including concurrency control, backup and recovery.</li> <li>5. Review the fundamental view on unstructured data and describe other emerging database technologies.</li> </ol> |  |  |  |                         |   |   |   |
| <b>Module:1</b>  | <b>Database Systems Concepts and Architecture</b>    |  |  | <b>4 hours</b>          |   |   |   |
| Need for database systems – Characteristics of Database Approach – Advantages of using DBMS approach - Actors on the Database Management Scene: Database Administrator - Classification of database management systems - Data Models - Schemas and Instances - Three-Schema Architecture - The Database System Environment - Centralized and Client/Server Architectures for DBMSs – Overall Architecture of Database Management Systems   |  |  |  |                         |   |   |   |
| <b>Module:2</b>  | <b>Relational Model and E-R Modeling</b>             |  |  | <b>6 hours</b>          |   |   |   |
| Relational Model: Candidate Keys, Primary Keys, Foreign Keys - Integrity Constraints - Handling of Nulls - Entity Relationship Model: Types of Attributes, Relationships, Structural Constraints, Relational model Constraints – Mapping ER model to a relational schema – Extended ER Model - Generalization – Specialization – Aggregations.   |  |  |  |                         |   |   |   |
| <b>Module:3</b>  | <b>Relational Database Design</b>                    |  |  | <b>6 hours</b>          |   |   |   |
| Database Design – Schema Refinement - Guidelines for Relational Schema - Functional dependencies - Axioms on Functional Dependencies- Normalization: First, Second and Third Normal Forms - Boyce Codd Normal Form, Multi-valued dependency and Fourth Normal form - Join dependency and Fifth Normal form   |  |  |  |                         |   |   |   |
| <b>Module:4</b>  | <b>Physical Database Design and Query Processing</b> |  |  | <b>8 hours</b>          |   |   |   |
| File Organization - Indexing: Single level indexing, multi-level indexing, dynamic multilevel Indexing - B+ Tree Indexing – Hashing Techniques: Static and Dynamic Hashing – Relational Algebra - Translating SQL Queries into Relational Algebra - Query Processing – Query Optimization: Algebraic Query Optimization, Heuristic query optimization Rules, Join Query Optimization using Indexing and Hashing - Tuple Relational Calculus.   |  |  |  |                         |   |   |   |
| <b>Module:5</b>  | <b>Transaction Processing and Recovery</b>           |  |  | <b>8 hours</b>          |   |   |   |

|   |   |                             |                 |
|---|---|-----------------------------|-----------------|
| Introduction to Transaction Processing – Transaction concepts: ACID Properties of Transactions, Transaction States - Serial and Serializable Schedules - Schedules based on recoverability – Schedules based on Serializability - Conflict Serializability - Recovery Concepts: Log Based Recovery Protocols, Recovery based on deferred update, Recovery techniques based on immediate update – Shadow Paging Algorithm  |   |                             |                 |
| <b>Module:6</b>   | <b>Concurrency Control In Transaction Processing</b>  | <b>8 hours</b>              |                 |
| Concurrent Transactions – Lost Update Problem - Concurrency Control Techniques: Time Stamp Based Protocols, Thomas Write Rule, Lock Based Protocols, Lock Compatibility Matrix, - Two-Phase Locking Protocol - Lock Conversions - Graph Based Protocols for Concurrency Control - Tree Protocol for Concurrency Control – Deadlocks Based on Locks in Transactions – Deadlock Handling Techniques – Transaction Deadlock Detection Techniques – Transaction Deadlock Prevention Techniques – Multi-Granularity Locking for avoiding Transaction Deadlocks |   |                             |                 |
| <b>Module:7</b>   | <b>NOSQL Database Management</b>  | <b>3 hours</b>              |                 |
| Introduction, Need of NoSQL, CAP Theorem, different NoSQL data bases: Key-value data stores, Columnar families, Document databases, Graph databases   |   |                             |                 |
| <b>Module:8</b>   | <b>Contemporary Issues</b>  | <b>2 Hours</b>              |                 |
|   |   | <b>Total Lecture hours:</b> | <b>45 hours</b> |

| <ol style="list-style-type: none"> <li>1. To introduce the operating system concepts, designs and provide skills required to implement the services.</li> <li>2. To describe the trade-offs between conflicting objectives in large scale system design.</li> <li>3. To develop the knowledge for application of the various design issues and services.</li> </ol>   |  |                         |   |   |   |
| <b>Course Outcomes</b>  |  |                         |   |   |   |
| On completion of this course, student should be able to:  |  |                         |   |   |   |
| <ol style="list-style-type: none"> <li>1. Interpret the evolution of OS functionality, structures, layers and apply various types of system calls of various process states.</li> <li>2. Design scheduling algorithms to compute and compare various scheduling criteria.</li> <li>3. Apply and analyze communication between inter process and synchronization techniques.</li> <li>4. Implement page replacement algorithms, memory management problems and segmentation.</li> <li>5. Differentiate the file systems for applying different allocation, access technique, representing virtualization and providing protection and security to OS.</li> </ol> |  |                         |   |   |   |
| <b>Module:1</b>   | <b>Introduction</b>                                | <b>3 hours</b>          |   |   |   |
| Introduction to OS: Functionality of OS - OS design issues - Structuring methods (monolithic, layered, modular, micro-kernel models) - Abstractions, processes, resources - Influence of security, networking, and multimedia.  |  |                         |   |   |   |
| <b>Module:2</b>   | <b>OS Principles</b>                               | <b>4 hours</b>          |   |   |   |
| System calls, System/Application Call Interface – Protection: User/Kernel modes - Interrupts -Processes - Structures (Process Control Block, Ready List etc.), Process creation, management in Unix – Threads: User level, kernel level threads and thread models.  |  |                         |   |   |   |
| <b>Module:3</b>   | <b>Scheduling</b>                                  | <b>9 hours</b>          |   |   |   |
| Processes Scheduling - CPU Scheduling: Pre-emptive, non-pre-emptive - Multiprocessor scheduling – Deadlocks - Resource allocation and management - Deadlock handling mechanisms: prevention, avoidance, detection, recovery.  |  |                         |   |   |   |
| <b>Module:4</b>   | <b>Concurrency</b>                                 | <b>8 hours</b>          |   |   |   |
| Inter-process communication, Synchronization - Implementing synchronization primitives (Peterson’s solution, Bakery algorithm, synchronization hardware) - Semaphores – Classical synchronization problems, Monitors: Solution to Dining Philosophers problem – IPC in Unix, Multiprocessors and Locking - Scalable Locks - Lock-free coordination.   |  |                         |   |   |   |
| <b>Module:5</b>   | <b>Memory Management</b>                           | <b>7 hours</b>          |   |   |   |
| Main memory management, Memory allocation strategies, Virtual memory: Hardware support for virtual memory (caching, TLB) – Paging - Segmentation - Demand Paging - Page Faults - Page Replacement -Thrashing - Working Set.   |  |                         |   |   |   |
| <b>Module:6</b>   | <b>Virtualization and File System Management</b>   | <b>6 hours</b>          |   |   |   |
| Virtual Machines - Virtualization (Hardware/Software, Server, Service, Network - Hypervisors - Container virtualization - Cost of virtualization - File system interface (access methods, directory structures) - File system implementation (directory implementation, file allocation methods) - File system recovery - Journaling - Soft updates - Log-structured file system - Distributed file system.   |  |                         |   |   |   |
| <b>Module:7</b>   | <b>Storage Management, Protection and Security</b> | <b>6 hours</b>          |   |   |   |
| Disk structure and attachment – Disk scheduling algorithms (seek time, rotational latency based)- System threats and security – Policy vs mechanism - Access vs authentication -  |  |                         |   |   |   |

|   |   |                |                 |
|---|---|----------------|-----------------|
| System protection: Access matrix – Capability based systems - OS: performance, scaling, future directions in mobile OS. |   |                |                 |
| <b>Module:8</b>   | <b>Contemporary Issues</b>  | <b>2 hours</b> |                 |
|   |   |                |                 |
|   |   |                |                 |

| 1. Types of grammars and models of automata.<br>2. Limitation of computation: What can be and what cannot be computed.<br>3. Establishing connections among grammars, automata and formal languages.   |   |                             |                 |   |   |   |
| <b>Course Outcome</b>  |   |                             |                 |   |   |   |
| On completion of this course, student should be able to:<br>1. Compare and analyse different computational models<br>2. Apply rigorously formal mathematical methods to prove properties of languages, grammars and automata.<br>3. Identify limitations of some computational models and possible methods of proving them.<br>4. Represent the abstract concepts mathematically with notations. |   |                             |                 |   |   |   |
| <b>Module:1</b>  | <b>Introduction to Languages and Grammars</b>   | <b>4 hours</b>              |                 |   |   |   |
| Recall on Proof techniques in Mathematics - Overview of a Computational Models - Languages and Grammars - Alphabets - Strings - Operations on Languages, Overview on Automata  |   |                             |                 |   |   |   |
| <b>Module:2</b>  | <b>Finite State Automata</b>  | <b>8 hours</b>              |                 |   |   |   |
| Finite Automata (FA) - Deterministic Finite Automata (DFA) - Non-deterministic Finite Automata (NFA) - NFA with epsilon transitions – NFA without epsilon transition, conversion of NFA to DFA, Equivalence of NFA and DFA – minimization of DFA   |   |                             |                 |   |   |   |
| <b>Module:3</b>  | <b>Regular Expressions and Languages</b>  | <b>7 hours</b>              |                 |   |   |   |
| Regular Expression - FA and Regular Expressions: FA to regular expression and regular expression to FA - Pattern matching and regular expressions - Regular grammar and FA - Pumping lemma for regular languages - Closure properties of regular languages   |   |                             |                 |   |   |   |
| <b>Module:4</b>  | <b>Context Free Grammars</b>  | <b>7 hours</b>              |                 |   |   |   |
| Context-Free Grammar (CFG) – Derivations - Parse Trees - Ambiguity in CFG - CYK algorithm – Simplification of CFG – Elimination of Useless symbols, Unit productions, Null productions - Normal forms for CFG: CNF and GNF - Pumping Lemma for CFL - Closure Properties of CFL   |   |                             |                 |   |   |   |
| <b>Module:5</b>  | <b>Pushdown Automata</b>  | <b>5 hours</b>              |                 |   |   |   |
| Definition of the Pushdown automata - Languages of a Pushdown automata – Power of Non-Deterministic Pushdown Automata and Deterministic pushdown automata  |   |                             |                 |   |   |   |
| <b>Module:6</b>  | <b>Turing Machine</b>   | <b>6 hours</b>              |                 |   |   |   |
| Turing Machines as acceptor and transducer - Multi head and Multi tape Turing Machines – Universal Turing Machine - The Halting problem - Turing-Church thesis   |   |                             |                 |   |   |   |
| <b>Module:7</b>  | <b>Recursive and Recursively Enumerable Languages</b>   | <b>6 hours</b>              |                 |   |   |   |
| Recursive and Recursively Enumerable Languages, Language that is not Recursively Enumerable (RE) – computable functions – Chomsky Hierarchy – Undecidable problems - Post's Correspondence Problem   |   |                             |                 |   |   |   |
| <b>Module:8</b>  | <b>Contemporary Issues</b>  | <b>2 hours</b>              |                 |   |   |   |

| <b>Course Objectives</b>  |                  |                         |   |   |   |
| <p>1. To expose students to various challenges and constraints of special purpose computing systems in terms of resources and functional requirements.</p> <p>2. To introduce students to various components of typical embedded systems viz., sensors and actuators, data converters, UART etc., their interfacing, programming environment for developing any smart systems and various serial communication protocols for optimal components interfacing and communication.</p> <p>3. To make students understand the importance of program modeling, optimization techniques and debugging tools for product development and explore various solutions for real time scheduling issues in terms of resources and deadline.</p>  |                  |                         |   |   |   |
| <b>Course Outcomes</b>  |                  |                         |   |   |   |
| <p>On completion of this course, students should be able to:</p> <ol style="list-style-type: none"> <li>1. Identify the challenges in designing an embedded system using various microcontrollers and interfaces.</li> <li>2. To summaries the functionality of any special purpose computing system, and to propose smart solutions to engineering challenges at the prototype level.</li> <li>3. To examine the working principle and interface of typical embedded system components, create programme models, apply various optimization approaches including simulation environment and demonstration using debugging tools.</li> <li>4. To evaluate the working principle of serial communication protocols and their proper use, as well as to analyze the benefits and drawbacks of real-time scheduling algorithms and to recommend acceptable solutions for specific challenges.</li> </ol> |                  |                         |   |   |   |
| <b>Module:1 Introduction</b>  |                  | <b>5 hours</b>          |   |   |   |
| Overview of Embedded Systems, Design challenges, Embedded processor technology, Hardware Design, Micro-controller architecture -8051, PIC, and ARM.   |                  |                         |   |   |   |
| <b>Module:2 I/O Interfacing Techniques</b>  |                  | <b>8 hours</b>          |   |   |   |
| Memory interfacing, A/D, D/A, Timers, Watch-dog timer, Counters, Encoder & Decoder, UART, Sensors and actuators interfacing.  |                  |                         |   |   |   |
| <b>Module:3 Architecture of Special Purpose Computing System</b>  |                  | <b>6 hours</b>          |   |   |   |
| ATM, Handheld devices, Data Compressor, Image Capturing Devices–Architecture and Requirements, Challenges & Constraints of special purpose computing system.  |                  |                         |   |   |   |
| <b>Module:4 Programming Tools</b>   |                  | <b>7 hours</b>          |   |   |   |
| Evolution of embedded programming tools, Modelling programs, Code optimization, Logic analyzers, Programming environment.   |                  |                         |   |   |   |
| <b>Module:5 Real Time Operating System</b>  |                  | <b>8 hours</b>          |   |   |   |
| Classification of Real time system, Issues & challenges in RTS, Real time scheduling schemes- EDF-RMS & Hybrid techniques, eCOS, POSIX, Protothreads.   |                  |                         |   |   |   |
| <b>Module:6 Embedded Networking Protocols</b>   |                  | <b>5 hours</b>          |   |   |   |
| Inter Integrated Circuits (I2C), Controller Area Network, Embedded Ethernet Controller, RS232, Bluetooth, Zigbee, Wifi.   |                  |                         |   |   |   |
| <b>Module:7 Applications of Embedded Systems</b>  |                  | <b>4 hours</b>          |   |   |   |
| Introduction to embedded system applications using case studies – Role in Agriculture sector, Automotive electronics, Consumer Electronics, Industrial controls, Medical Electronics.   |                  |                         |   |   |   |
| <b>Module:8 Contemporary Issues</b>   |                  | <b>2 hours</b>          |   |   |   |

| <b>Module:1</b>  |                 | <b>INTRODUCTION TO COMPILATION AND LEXICAL ANALYSIS</b> |   |   | <b>7 hours</b> |
| Introduction to LLVM - Structure and Phases of a Compiler-Design Issues-Patterns-Lexemes-Tokens-Attributes-Specification of Tokens-Extended Regular Expression- Regular expression to Deterministic Finite Automata (Direct method) - Lex - A Lexical Analyzer Generator.  |                 |   |   |   |                |
| <b>Module:2</b>  |                 | <b>SYNTAX ANALYSIS</b>                                  |   |   | <b>8 hours</b> |
| Role of Parser- Parse Tree - Elimination of Ambiguity – Top Down Parsing - Recursive Descent Parsing - LL (1) Grammars – Shift Reduce Parsers- Operator Precedence Parsing - LR Parsers, Construction of SLR Parser Tables and Parsing- CLR Parsing- LALR Parsing.   |                 |   |   |   |                |
| <b>Module:3</b>  |                 | <b>SEMANTICS ANALYSIS</b>                               |   |   | <b>5 hours</b> |
| Syntax Directed Definition – Evaluation Order - Applications of Syntax Directed Translation - Syntax Directed Translation Schemes - Implementation of L-attributed Syntax Directed Definition.   |                 |   |   |   |                |
| <b>Module:4</b>  |                 | <b>INTERMEDIATE CODE GENERATION</b>                     |   |   | <b>5 hours</b> |
| Variants of Syntax trees - Three Address Code- Types – Declarations - Procedures - Assignment Statements - Translation of Expressions - Control Flow - Back Patching- Switch Case Statements.  |                 |   |   |   |                |
| <b>Module:5</b>  |                 | <b>CODE OPTIMIZATION</b>                                |   |   | <b>6 hours</b> |
| Loop optimizations- Principal Sources of Optimization -Introduction to Data Flow Analysis - Basic Blocks - Optimization of Basic Blocks - Peephole Optimization- The DAG Representation of Basic Blocks -Loops in Flow Graphs - Machine Independent Optimization- Implementation of a naïve code generator for a virtual Machine- Security checking of virtual machine code.   |                 |   |   |   |                |
| <b>Module:6</b>  |                 | <b>CODE GENERATION</b>                                  |   |   | <b>5 hours</b> |
| Issues in the design of a code generator- Target Machine- Next-Use Information - Register Allocation and Assignment- Runtime Organization- Activation Records.   |                 |   |   |   |                |
| <b>Module:7</b>  |                 | <b>PARALLELISM</b>                                      |   |   | <b>7 hours</b> |
| Parallelization- Automatic Parallelization- Optimizations for Cache Locality and Vectorization- Domain Specific Languages-Compilation- Instruction Scheduling and Software Pipelining- Impact of Language Design and Architecture Evolution on Compilers- Static Single Assignment   |                 |   |   |   |                |
| <b>Module:8</b>  |                 | <b>Contemporary Issues</b>                              |   |   | <b>2 hours</b> |

| On completion of this course, students should be able to:   |  |                         |            |            |          |
| <ol style="list-style-type: none"> <li>1. Implement various cipher techniques without using standard cryptographic library functions</li> <li>2. Develop the various hash functions and digital signature algorithms for different applications</li> <li>3. Develop various secured networking-based application</li> </ol> |  |                         |            |            |          |
| <b>Indicative Experiments</b>   |  |                         |            |            |          |
| 1.  | Consider a sender and receiver who need to exchange data confidentially using symmetric encryption. Write program that implements DES encryption and decryption using a 64 bit key size and 64 bit block size  |                         |            |            |          |
| 2.  | Consider a sender and receiver who need to exchange data confidentially using symmetric encryption. Write program that implements AES encryption and decryption using a 64/128/256 bits key size and 64 bit block size.  |                         |            |            |          |
| 3   | Develop an chipper scheme by using RSA   |                         |            |            |          |
| 4.  | Develop a MD5 hash algorithm that finds the Message Authentication Code (MAC)  |                         |            |            |          |
| 5   | Find a Message Authentication Code (MAC) for given variable size message by using SHA-128 and SHA-256 Hash algorithm<br>Measure the Time consumptions for varying message size for both SHA-128 and SHA-256.   |                         |            |            |          |
| 6   | Develop the Digital Signature standard(DSS)for verifying the legal communicating parties   |                         |            |            |          |
| 7   | Design a Diffie Hellman multiparty key exchange protocol and perform Man-in-the-Middle Attack.   |                         |            |            |          |
| 8   | Develop a simple client and server application using SSL socket communication  |                         |            |            |          |
| 9   | Develop a simple client server model using telnet and capture the packets transmitted with tshark Analyze the pcap file and get the transmitted data (plain text) using any packet capturing library.<br>Implement the above scenario using SSH and observe the data |                         |            |            |          |
| 10  | Develop a web application that implements JSON web token   |                         |            |            |          |
| <b>Total Laboratory Hours</b>   |  |                         |            |            | 30 hours |
| <b>Mode of assessment:</b> Continuous Assessment, FAT   |  |                         |            |            |          |
| Recommended by Board of Studies   |  |                         | 04-03-2022 |            |          |

## Discipline Elective

| Course code  | Course Title                                  | L                | T | P | C |
|--|---|------------------|---|---|---|
| BCSE206L   | Foundations of Data Science                   | 3                | 0 | 0 | 3 |
| Pre-requisite  | NIL   | Syllabus version |   |   |   |
|  |   | 1.0              |   |   |   |
| <b>Course Objectives</b>   |   |                  |   |   |   |
| <ol style="list-style-type: none"> <li>To provide fundamental knowledge on data science with querying and analytics required for the field of data science.</li> <li>To understand the process of handling heterogeneous data, pre-process and visualize them for better understanding.</li> <li>To gain the fundamental knowledge on data science tools and gain basic skill set to solve real-time data science problems.</li> </ol>   |   |                  |   |   |   |
| <b>Course Outcome</b>  |   |                  |   |   |   |
| <p>Upon completion of the course the student will be able to</p> <ol style="list-style-type: none"> <li>Ability to obtain fundamental knowledge on data science.</li> <li>Demonstrate proficiency in data analytics.</li> <li>Apply advanced tools to work on dimensionality reduction and mathematical operations.</li> <li>Handle various types of data and visualize them using through programming for knowledge representation.</li> <li>Demonstrate numerous open source data science tools to solve real-world problems through industrial case studies.</li> </ol> |   |                  |   |   |   |
| <b>Module:1</b>  | <b>Data Science Context</b>                   | <b>5 hours</b>   |   |   |   |
| Need for Data Science – What is Data Science - Data Science Process – Business Intelligence and Data Science – Prerequisites for a Data Scientist – Tools and Skills required.   |   |                  |   |   |   |
| <b>Module:2</b>  | <b>Databases for Data Science</b>             | <b>7 hours</b>   |   |   |   |
| Structured Query Language (SQL): Basic Statistics, Data Munging, Filtering, Joins, Aggregation, Window Functions, Ordered Data, preparing No-SQL: Document Databases, Wide-column Databases and Graphical Databases.   |   |                  |   |   |   |
| <b>Module:3</b>  | <b>Data Science Methodology</b>               | <b>8 hours</b>   |   |   |   |
| Analytics for Data Science – Examples of Data Analytics – Data Analytics Lifecycle: Data Discovery, Data Preparation, Model Planning, Model Building, Communicate Results.   |   |                  |   |   |   |
| <b>Module:4</b>  | <b>Data Analytics on Text</b>                 | <b>7 hours</b>   |   |   |   |
| Major Text Mining Areas – Information Retrieval – Data Mining – Natural Language Processing (NLP) – Text analytics tasks: Cleaning and Parsing, Searching, Retrieval, Text Mining, Part-of-Speech Tagging, Stemming, Text Analytics Pipeline. NLP: Major components of NLP, stages of NLP, and NLP applications.   |   |                  |   |   |   |
| <b>Module:5</b>  | <b>Platform for Data Science</b>              | <b>6 hours</b>   |   |   |   |
| Python for Data Science –Python Libraries – Data Frame Manipulation with numpy and pandas – Exploration Data Analysis – Time Series Dataset – Clustering with Python – Dimensionality Reduction. Python integrated Development Environments (IDE) for Data Science.  |   |                  |   |   |   |
| <b>Module:6</b>  | <b>GNU Octave for Mathematical Operations</b> | <b>6 hours</b>   |   |   |   |
| Handling Vectors and Matrices: Multiplication, Transpose, Random Matrix creation, Eigen Vectors and Eigen Values, Determinants. Arithmetic Operations – Set Operations – Plotting Data.  |   |                  |   |   |   |
| <b>Module:7</b>  | <b>Tableau</b>                                | <b>4 hours</b>   |   |   |   |
| Tableau Introduction – Dimensions, Measures, Descriptive Statistics, Basic Charts, Dashboard Design Principles, Special Chart Types, Integrate Tableau with Google Sheets.   |   |                  |   |   |   |
| <b>Module:8</b>  | <b>Contemporary Issues</b>                    | <b>2 hours</b>   |   |   |   |

|  |  |                 |                 |
|--|--|-----------------|-----------------|
|  | <b>Total Lecture hours:</b>  | <b>45 hours</b> |                 |
| <b>Text Book(s)</b>  |  |                 |                 |
| 1.   | Sanjeev Wagh, Manisha Bhende, Anuradha Thakare, 'Fundamentals of Data Science, CRC Press, 1 <sup>st</sup> Edition, 2022.     |                 |                 |
| <b>Reference Books</b>   |  |                 |                 |
| 1.   | Avrim Blum, John Hopcroft, Ravindran Kannan, "Foundations of Data Science", Cambridge University Press, First Edition, 2020. |                 |                 |
| 2.   | Joel Grus, "Data Science from Scratch: First Principles with Python", O'Reilly Media, 1 <sup>st</sup> Edition, 2015.         |                 |                 |
| 3.   | Ani Adhikari and John DeNero, 'Computational and Inferential Thinking: The Foundations of Data Science', GitBook, 2019.      |                 |                 |
| Mode of Evaluation : Continuous Assessment Tests, Quizzes, Assignment, Final Assessment Test |  |                 |                 |

| <b>Course Objectives</b>  |   |                             |   |                 |   |
| <ol style="list-style-type: none"> <li>To provide necessary knowledge on data manipulation and to perform analysis on the practical problems using a programming approach.</li> <li>To generate report and visualize the results in graphical form using programming tools.</li> <li>To learn and implement R programs for data science.</li> </ol>   |   |                             |   |                 |   |
| <b>Course Outcome</b>   |   |                             |   |                 |   |
| <p>Upon completion of the course, the student will be able to</p> <ol style="list-style-type: none"> <li>Engrave and use R language to solve problems.</li> <li>Design a suitable form for analysis from real-time data.</li> <li>Formulate insights from the data through statistical inferences.</li> <li>Evaluate and visualize the results, analyze the performance of the models.</li> </ol> |   |                             |   |                 |   |
| <b>Module:1</b>   | <b>Functions in R</b>   | <b>2 hours</b>              |   |                 |   |
| Programming with R- Running R Code - Including Comments - Defining Variables, Functions -Built-in R Functions - Loading Functions - Writing Functions - Using Conditional Statements.   |   |                             |   |                 |   |
| <b>Module:2</b>   | <b>Vectors and Lists</b>  | <b>3 hours</b>              |   |                 |   |
| Vector - Vectorized Operations - Vector Indices - Vector Filtering - Modifying Vectors, Lists - Creating Lists - Accessing List Elements - Modifying Lists- Applying Functions to Lists with lapply().  |   |                             |   |                 |   |
| <b>Module:3</b>   | <b>Data Wrangling</b>   | <b>4 hours</b>              |   |                 |   |
| Understanding Data - The Data Generation Process - Finding Data - Types of Data - Interpreting Data - Using Data to Answer Questions - Data Frames - Working with Data Frames -Working with CSV Data.   |   |                             |   |                 |   |
| <b>Module:4</b>   | <b>Manipulating Data with dplyr and tidyr</b>                                     | <b>5 hours</b>              |   |                 |   |
| Data Manipulation - Core dplyr Functions- Performing Sequential Operations -Analyzing Data Frames by Group - Joining Data Frames Together - dplyr in Action: Analyzing Flight Data- Reshaping Data with tidyr -From Columns to Rows: gather() - From Rows to Columns: spread() - tidyr in Action: Exploring Educational Statistics.   |   |                             |   |                 |   |
| <b>Module:5</b>   | <b>Accessing Databases and Web APIs</b>   | <b>5 hours</b>              |   |                 |   |
| An Overview of Relational Databases -A Taste of SQL-Accessing a Database from R - Accessing Web APIs -RESTful Requests -Accessing Web APIs from R -Processing JSON Data -APIs in Action: Finding Cuban Food in Seattle.   |   |                             |   |                 |   |
| <b>Module:6</b>   | <b>Data Visualization</b>   | <b>6 hours</b>              |   |                 |   |
| Designing Data Visualizations - The Purpose of Visualization - Selecting Visual Layouts - Choosing Effective Graphical Encodings - Expressive Data Displays - Enhancing Aesthetics - Creating Visualizations with ggplot2- A Grammar of Graphics - Basic Plotting with ggplot2 - Complex Layouts and Customization - Building Maps- ggplot2 in Action: A case study.                              |   |                             |   |                 |   |
| <b>Module:7</b>   | <b>Interactive Visualization in R</b>   | <b>3 hours</b>              |   |                 |   |
| The Plotly Package - The Rbokeh Package - The Leaflet Package - Interactive Visualization in Action: Exploring Changes to the City of Seattle.  |   |                             |   |                 |   |
| <b>Module:8</b>   | <b>Contemporary Issues</b>  | <b>2 hours</b>              |   |                 |   |

| <ol style="list-style-type: none"> <li>To introduce the fundamental processes data warehousing and major issues in data mining.</li> <li>To impart the knowledge on various data mining concepts and techniques that can be applied to text mining, web mining etc.</li> <li>To develop the knowledge for application of data mining and social impacts of data mining.</li> </ol>  |  |                  |   |   |   |
| <b>Course Outcome</b>   |  |                  |   |   |   |
| <p>Upon completion of the course the student will be able to</p> <ol style="list-style-type: none"> <li>Interpret the contribution of data warehousing and data mining to the decision-support systems.</li> <li>Construct the data needed for data mining using preprocessing techniques.</li> <li>Discover interesting patterns from large amounts of data using Association Rule Mining.</li> <li>Extract useful information from the labeled data using various classifiers and Compile unlabeled data into clusters applying various clustering algorithms.</li> <li>Demonstrate capacity to perform a self-directed piece of practical work that requires the application of data mining techniques.</li> </ol> |  |                  |   |   |   |
| <b>Module:1</b>   | <b>Data Warehousing</b>                          | <b>4 hours</b>   |   |   |   |
| Introduction to Data warehouse - Data Warehouse models- Data warehouse architecture: Three-tier data warehouse architecture - Data warehouse modeling: Data cube and OLAP – Star and Snowflake Schema.  |  |                  |   |   |   |
| <b>Module:2</b>   | <b>Introduction to Data Mining</b>               | <b>3 hours</b>   |   |   |   |
| Introduction to data mining - Data mining functionalities - Steps in data mining process- Classification of data mining systems - Major issues in data mining.  |  |                  |   |   |   |
| <b>Module:3</b>   | <b>Data Preprocessing</b>                        | <b>3 hours</b>   |   |   |   |
| Data Preprocessing: An overview - Data cleaning - Data integration -Data reduction - Data transformation.   |  |                  |   |   |   |
| <b>Module:4</b>   | <b>Frequent Pattern Mining</b>                   | <b>4 hours</b>   |   |   |   |
| Frequent Pattern Mining: Basic Concepts and a Road Map - Efficient and scalable frequent item set mining methods: Apriori algorithm, FP-Growth algorithm - Mining frequent item sets using vertical data format.  |  |                  |   |   |   |
| <b>Module:5</b>   | <b>Classification Techniques</b>                 | <b>5 hours</b>   |   |   |   |
| General approach to classification - Classification by decision tree induction - Bayes classification methods - Model evaluation and selection - Techniques to improve classification accuracy - advanced classification methods: Bayesian belief networks- Lazy learners.  |  |                  |   |   |   |
| <b>Module:6</b>   | <b>Cluster Analysis</b>                          | <b>5 hours</b>   |   |   |   |
| Types of data in cluster analysis - Partitioning methods - K Medoid Clustering - Density based methods - Grid based methods - Outlier analysis.   |  |                  |   |   |   |
| <b>Module:7</b>   | <b>Data Mining Trends and Research Frontiers</b> | <b>4 hours</b>   |   |   |   |
| Overview of Web mining-Temporal and Spatial mining-Other methodologies of data mining: Statistical data mining- Data mining applications.   |  |                  |   |   |   |
| <b>Module:8</b>   | <b>Contemporary Issues</b>                       | <b>2 hours</b>   |   |   |   |

|  |  |                 |                 |

| At the end of this course, student will be able to:  |  |                  |   |   |   |
| <ol style="list-style-type: none"> <li>Understand, visualize, analyze and preprocess the data from a real-time source.</li> <li>Apply appropriate algorithm to the data.</li> <li>Analyze the results of algorithm and convert to appropriate information required for the real – time application.</li> <li>Evaluate the performance of various algorithms that could be applied to the data and to suggest most relevant algorithm according to the environment.</li> </ol>                      |  |                  |   |   |   |
| <b>Module:1</b>  | <b>Introduction to Machine Learning and Pre-requisites</b>   | <b>4 hours</b>   |   |   |   |
| Introduction to Machine Learning – Learning Paradigms – PAC learning – Version Spaces – Role of Machine Learning in Artificial Intelligence applications.  |  |                  |   |   |   |
| <b>Module:2</b>  | <b>Supervised Learning – I</b>   | <b>7 hours</b>   |   |   |   |
| Linear and Non-Linear examples – Multi-Class & Multi-Label classification – Linear Regression – Multiple Linear Regression – Naïve Bayes Classifier – Decision Trees – ID3 – CART – Error bounds.  |  |                  |   |   |   |
| <b>Module:3</b>  | <b>Supervised Learning – II</b>  | <b>8 hours</b>   |   |   |   |
| K-NN classifier – Logistic regression – Perceptron – Single layer & Multi-layer – Support Vector Machines – Linear & Non-linear – Metrics & Error Correction.  |  |                  |   |   |   |
| <b>Module:4</b>  | <b>Unsupervised Learning</b>   | <b>9 hours</b>   |   |   |   |
| Clustering basics (Partitioned, Hierarchical and Density based) - K-Means clustering – K-Mode clustering – Self organizing maps – Expectation maximization – Principal Component Analysis – Kernel PCA – tSNE (t-distributed stochastic neighbor embedding) - Metrics & Error Correction.  |  |                  |   |   |   |
| <b>Module:5</b>  | <b>Ensemble Learning</b>   | <b>5 hours</b>   |   |   |   |
| Bias – Variance Tradeoff – Bagging and Boosting (Random forests, Adaboost, XG boost inclusive) – Metrics & Error Correction.   |  |                  |   |   |   |
| <b>Module:6</b>  | <b>Machine Learning in Practice</b>  | <b>3 hours</b>   |   |   |   |
| Class Imbalance – SMOTE – One Class SVM – Optimization of hyper parameters.  |  |                  |   |   |   |
| <b>Module:7</b>  | <b>Reinforcement Learning (RL)</b>   | <b>8 hours</b>   |   |   |   |
| Basics of RL – RL Framework – Markov Decision Process – Exploration Vs Exploitation - Polices, Value Functions and Bellman Equations – Solution Methods – Q-learning.  |  |                  |   |   |   |
| <b>Module:8</b>  | <b>Contemporary Issues</b>   | <b>1 hour</b>    |   |   |   |

| <b>Course Objectives</b>   |  |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. The course introduces the methods for data preparation and data understanding.</li> <li>2. It covers essential exploratory techniques for understanding multivariate data by summarizing it through statistical and graphical methods.</li> <li>3. Supports to summarize use of predictive analytics, data science and data visualization.</li> </ol>  |  |                  |   |   |   |
| <b>Course Outcomes</b>   |  |                  |   |   |   |
| At the end of the course, the student will be able to  |  |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. Handle missing data in the real world data sets by choosing appropriate methods.</li> <li>2. Summarize the data using basic statistics. Visualize the data using basic graphs and plots.</li> <li>3. Identify the outliers if any in the data set.</li> <li>4. Choose appropriate feature selection and dimensionality reduction.</li> <li>5. Apply Techniques for handling multi-dimensional data.</li> </ol> |  |                  |   |   |   |
| <b>Module:1</b>  | <b>Introduction to Exploratory Data Analysis</b>     | <b>4 hours</b>   |   |   |   |
| Introduction to Exploratory Data Analysis (EDA) –Steps in EDA, Data Types: Numerical Data – Discrete data, continuous data – Categorical data – Measurement Scales: Nominal, Ordinal, Interval, Ratio – Comparing EDA with classical and Bayesian Analysis – Software tools for EDA.   |  |                  |   |   |   |
| <b>Module:2</b>  | <b>Data Transformation</b>                           | <b>4 hours</b>   |   |   |   |
| Transformation Techniques: Performing data deduplication - replacing values – Discretization and binning. Introduction to Missing data, handling missing data: Traditional methods - Maximum Likelihood Estimation.  |  |                  |   |   |   |
| <b>Module:3</b>  | <b>Correlation Analysis and Time Series Analysis</b> | <b>4 hours</b>   |   |   |   |
| Types of analysis: Univariate analysis - bivariate analysis - multivariate analysis. Time Series Analysis (TSA): Fundamentals of TSA - characteristics of TSA – Time based indexing - visualizing time series – grouping time series data - resampling time series data.   |  |                  |   |   |   |
| <b>Module:4</b>  | <b>Data Summarization and Visualization</b>          | <b>4 hours</b>   |   |   |   |
| Statistical summary measures, data elaboration, 1-D Statistical data analysis, 2-D Statistical data Analysis, contingency tables, n-D Statistical data analysis. Visualization: Scatter plots – Dot charts - Bar plots.  |  |                  |   |   |   |
| <b>Module:5</b>  | <b>Clustering Algorithms</b>                         | <b>4 hours</b>   |   |   |   |
| Introduction to Spectral clustering – Document clustering – Minimum Spanning Tree clustering. Overview of Model-based clustering – Expectation-Maximization algorithm – Hierarchical Agglomerative model-based clustering. Outlier detection using Clustering.   |  |                  |   |   |   |
| <b>Module:6</b>  | <b>Dimensionality Reduction</b>                      | <b>4 hours</b>   |   |   |   |
| Linear Methods: Principal Component Analysis (PCA) – Singular Value Decomposition – Factor Analysis -Intrinsic Dimensionality. Non Linear methods: Multidimensional Scaling – Manifold Learning – Self-Organizing Maps.  |  |                  |   |   |   |
| <b>Module:7</b>  | <b>Model Development and Evaluation</b>              | <b>4 hours</b>   |   |   |   |
| Constructing linear regression model – evaluation – computing accuracy – understanding accuracy. Understanding reinforcement learning: Difference between supervised and reinforcement learning – Applications of reinforcement learning.  |  |                  |   |   |   |
| <b>Module:8</b>  | <b>Contemporary Issues</b>                           | <b>2 hours</b>   |   |   |   |

|   |  |                 |

| <ol style="list-style-type: none"> <li>1. Understand the notion of a parametric model, point estimation of the parameters and properties of a good estimator.</li> <li>2. Learn the concept of interval estimation and confidence intervals.</li> <li>3. Understand and perform large-sample tests of hypotheses.</li> <li>4. Discuss nonparametric tests of hypotheses.</li> <li>5. Translate and correlate the statistical analysis into Statistical inference</li> </ol> |                                  |                  |   |   |   |
| <b>Module:1</b>   | <b>Introduction to Estimator</b> | <b>4 hours</b>   |   |   |   |
| Population, sample, parameter and statistic- Estimator, Estimate-characteristics of a good estimator – Unbiasedness- Consistency-Invariance property of Consistent estimator- Sufficient condition for consistency- Sufficiency- Factorization Theorem- Minimal sufficiency- Efficiency- Applications of Lehmann-Scheffe's theorem, Rao - Blackwell Theorem and applications. Bayesian Estimation.  |                                  |                  |   |   |   |
| <b>Module:2</b>   | <b>Point Estimation</b>          | <b>5 hours</b>   |   |   |   |
| Methods of point estimation- Maximum likelihood method (the asymptotic properties of ML estimators are not included), Large sample properties of ML estimator (without proof)- applications of MLE, Method of Minimum variance, method of moments, method of least squares, method of minimum chi-square.   |                                  |                  |   |   |   |
| <b>Module:3</b>   | <b>Interval Estimation</b>       | <b>3 hours</b>   |   |   |   |
| Confidence limits and confidence coefficient; Duality between acceptance region of a test and a confidence interval; Construction of confidence intervals for population proportion (small and large samples) and between two population proportions (large samples); Confidence intervals for mean and variance of a normal population; Difference between the mean and ratio of two normal populations.   |                                  |                  |   |   |   |
| <b>Module:4</b>   | <b>Testing of hypotheses</b>     | <b>4 hours</b>   |   |   |   |
| Types of errors, power of a test, most powerful tests; Neyman-Pearson Fundamental Lemma and its applications; Notion of Uniformly most powerful tests; Likelihood Ratio tests: Description and property of LR tests - Application to standard distributions.  |                                  |                  |   |   |   |
| <b>Module:5</b>   | <b>Large sample tests</b>        | <b>4 hours</b>   |   |   |   |
| Large sample properties; Tests of significance (under normality assumption)- Test for a single population mean, proportion; Test for equality of two means, proportions; Test for variance, Test for correlation and Test for Regression.   |                                  |                  |   |   |   |
| <b>Module:6</b>   | <b>Small sample tests</b>        | <b>4 hours</b>   |   |   |   |
| Student's t-test, test for a population mean, equality of two population means, paired t-test, F-test for equality of two population variances; Chi-square test for goodness of fit, independence of attributes.  |                                  |                  |   |   |   |
| <b>Module:7</b>   | <b>Non-parametric tests</b>      | <b>4 hours</b>   |   |   |   |
| Sign test, Wilcoxon Signed rank test, Median test, Wilcoxon-Mann-Whitney test, Run test and One sample Kolmogorov Smirnov test, Kruskal Wallis-H-test: Description, properties and applications.  |                                  |                  |   |   |   |

|   |  |                    |                 |
|---|--|--------------------|-----------------|
| <b>Module:8</b>   | <b>Contemporary Issues</b>   | <b>2 hours</b>     |                 |
|   |  | <b>Total hours</b> | <b>30 hours</b> |

| <b>Course Objectives</b>   |  |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. Describe how data-based healthcare can help in improving outcomes for patient health.</li> <li>2. To design data models that combine patient records from multiple sources to form a patient centric view of data.</li> <li>3. To use data analytics to find health concerns and solutions to the problem faced by a patient.</li> <li>4. To find meaningful patterns and trends in healthcare data to help the overall population.</li> </ol> |  |                  |   |   |   |
| <b>Course Outcomes</b>   |  |                  |   |   |   |
| At the end of the course, the student will be able to  |  |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. Explain the concepts of Healthcare Data Analytics and healthcare foundations.</li> <li>2. Apply machine learning techniques on healthcare data analytics.</li> <li>3. Measure and analyse the quality of health-care systems.</li> <li>4. Develop models for effective predictions in healthcare applications.</li> <li>5. Use modern day emerging technologies in healthcare data analytics process.</li> </ol>                               |  |                  |   |   |   |
| <b>Module:1</b>  | <b>Introduction to Healthcare Data Analytics</b>   | <b>3 hours</b>   |   |   |   |
| Introduction – Need for Healthcare Analytics - Foundations of Healthcare Analytics – Examples of Healthcare Analytics.   |  |                  |   |   |   |
| <b>Module:2</b>  | <b>Healthcare Foundations</b>                      | <b>5 hours</b>   |   |   |   |
| Healthcare delivery - Healthcare financing - Healthcare policy – Handling Patient data: the journey from patient to computer - Standardized clinical codesets - Breaking down healthcare analytics: population, medical task, data format, disease.  |  |                  |   |   |   |
| <b>Module:3</b>  | <b>Machine Learning Foundations for Healthcare</b> | <b>8 hours</b>   |   |   |   |
| Model frameworks for medical decision making: Tree-like reasoning, Probabilistic reasoning and Bayes theorem, Criterion tables and the weighted sum approach, Pattern association and neural networks - Machine learning pipeline: Loading the data, Cleaning and preprocessing the data, Exploring and visualizing the data, Selecting features, Training the model parameters, Evaluating model performance.   |  |                  |   |   |   |
| <b>Module:4</b>  | <b>Measuring Healthcare Quality</b>                | <b>8 hours</b>   |   |   |   |
| Introduction to healthcare measures, Medicare value-based programs: The Hospital Value-Based Purchasing (HVBP) program, The Hospital Readmission Reduction (HRR) program, The Hospital-Acquired Conditions (HAC) program, The End-Stage Renal Disease (ESRD) quality incentive program, The Skilled Nursing Facility Value-Based Program (SNFVBP), The Home Health Value-Based Program (HHVBP), The Merit-Based Incentive Payment System (MIPS).   |  |                  |   |   |   |
| <b>Module:5</b>  | <b>Making Predictive Models in Healthcare</b>      | <b>8 hours</b>   |   |   |   |
| Introduction to Predictive Analytics – Obtaining and Importing the NHAMCS Dataset – Making the Response Variable - Splitting the Data into Train and Test Sets - Preprocessing the Predictor Variables – Building the Models – Using the Models to Make Predictions – Improving our Models.  |  |                  |   |   |   |
| <b>Module:6</b>  | <b>Healthcare Analytics Applications</b>           | <b>6 hours</b>   |   |   |   |
| Introduction - Descriptive Analytics Applications - Predictive Analytics Applications - Prescriptive Analytics Application.  |  |                  |   |   |   |
| <b>Module:7</b>  | <b>Healthcare and Emerging Technologies</b>        | <b>5 hours</b>   |   |   |   |
| Healthcare analytics and the internet - Healthcare and the Internet of Things - Healthcare   |  |                  |   |   |   |

|   |   |                            |                 |
|---|---|----------------------------|-----------------|
| analytics and social media - Healthcare and deep learning - Obstacles, ethical issues, and limitations. |   |                            |                 |
| <b>Module:8</b>   | <b>Contemporary Issues</b>  |                            | <b>2 hours</b>  |
|   |   | <b>Total Lecture hours</b> | <b>45 hours</b> |

| Course Objectives  |   |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. To create a conceptual understanding of the basic principles of sensors, actuators, and their operations</li> <li>2. To analyze the real-world problems and provide solutions using sensors and actuators</li> <li>3. To promote awareness regarding recent developments in the fields of sensors and actuators</li> </ol>   |   |                  |   |   |   |
| Course Outcomes  |   |                  |   |   |   |
| <p>At the end of this course, student will be able to:</p> <ol style="list-style-type: none"> <li>1. Classify different Sensors &amp; Actuators based on various physical phenomena and differentiate their performance characteristics</li> <li>2. Analyze the working principles of thermal, optical &amp; electric sensors and actuators to interpret their mathematical model</li> <li>3. Interpret the functional principles of magnetic, thermal &amp; Chemical sensors and actuators to interpret their mathematical model</li> <li>4. Select the relevant sensors and actuators to design real-time data acquisition from ambience via case studies</li> </ol> |   |                  |   |   |   |
| Module:1   | Overview of Sensors and Actuators           | 4 hours          |   |   |   |
| The five senses: vision, hearing, smell, taste, and touch – Definitions: Sensors & Actuators – Overview of Sensor and Actuator classifications – Performance characteristics of Sensors & Actuators: Transfer Function, Range, Span, Input and Output Full Scale, Resolution, and Dynamic Range - Calibration & Reliability  |   |                  |   |   |   |
| Module:2   | Temperature Sensors and Thermal Actuators   | 3 hours          |   |   |   |
| Thermoresistive sensors: Thermistors, Resistance temperature, and silicon resistive sensors – Thermoelectric sensors – Other Temperature sensors: Optical and Acoustical – Thermomechanical Sensors and Actuators – Case study: <i>Breath analyzer</i> using temperature   |   |                  |   |   |   |
| Module:3   | Optical Sensors and Actuators               | 4 hours          |   |   |   |
| Principles of Optics: Optical units – Quantum effects – Quantum-based Optical sensors – Photoelectric sensors – Charge coupled device (CCD) based – Thermal-based Optical sensors – Active infrared (AFIR) sensors – Optical Actuators – Case study: Liquid Level Indicator using Optical Sensors  |   |                  |   |   |   |
| Module:4   | Electric and Magnetic Sensors and Actuators | 4 hours          |   |   |   |
| Principles of Electric and Magnetic fields: Basic units – The Electric field: Capacitive Sensors & Actuators – Magnetic sensors and actuators – Magnetoresistance – Magnetostrictive Sensors and Actuators – Magnetometers – Magnetic actuators: Voice Coil Actuators, Motors as Actuators & Magnetic Solenoid Actuators and Magnetic Valves – Case Study: Speed sensing and odometer in a car using smart sensors   |   |                  |   |   |   |
| Module:5   | Mechanical Sensors and Actuators            | 5 hours          |   |   |   |
| Definitions and units – Force Sensors: Strain Gauges, Semiconductor Strain Gauges & Tactile Sensors – Accelerometers: Capacitive Accelerometers, Strain Gauge Accelerometers & Magnetic Accelerometers – Pressure Sensors: Mechanical, Piezoresistive, Capacitive & Magnetic – Velocity sensing – Inertial sensors and actuators: Mechanical or Rotor & Optical Gyroscopes – Case study: Tire-pressure monitoring system using smart sensors   |   |                  |   |   |   |
| Module:6   | Acoustic Sensors and Actuators              | 3 hours          |   |   |   |

|   |  |                             |                 |
|---|--|-----------------------------|-----------------|
| Definitions and units – Elastic waves and their properties – Microphones: Carbon, Magnetic, Ribbon and Capacitive Microphones – Piezoelectric effect – Piezoelectric Sensors – Acoustic Actuators: Loudspeakers, Headphones and Buzzers - Magnetic and Piezoelectric – Ultrasonic sensors and actuators – Case Study: Ultrasonic parking system   |  |                             |                 |
| <b>Module:7</b>   | <b>Chemical Sensors and Actuators</b>  |                             | <b>5 hours</b>  |
| Chemical units and Definitions – Electrochemical sensors: Metal Oxide Sensors and Solid Electrolyte Sensors – Potentiometric smart sensors: Glass Membranes, Soluble Inorganic Salt Membrane and Polymer - Immobilized Ionophore Membranes sensors – Thermochemical, Optical, Mass humidity gas sensors – Chemical Actuators: The Catalytic Converter - The Airbag System using smart sensors – Case study: Water quality monitoring system |  |                             |                 |
| <b>Module:8</b>   | <b>Contemporary Issues</b>   |                             | <b>2 hours</b>  |
|   |  | <b>Total Lecture hours:</b> | <b>30 Hours</b> |

| <b>Course Objectives</b>  |  |                         |   |   |   |
| 1. To introduce Internet of Things (IoT) environment and its technologies for designing smart systems<br>2. To explore open-source computer hardware/software platform, development and debugging environment, programming constructs and necessary libraries<br>3. To learn embedded programming constructs and real time systems  |  |                         |   |   |   |
| <b>Course Outcome</b>   |  |                         |   |   |   |
| At the end of this course, student will be able to:   |  |                         |   |   |   |
| 1. Investigate various challenges and explore open source hardware prototyping platforms for designing IoT devices<br>2. Understand basic circuits, sensors and interfacing, data conversion process and shield libraries to interface with the real world<br>3. Program SBC by exploring protocols, data conversion process, API and expansion boards for practical IoT devices using Python<br>4. Learn embedded programming constructs and constraints in real time systems for real world socio-economic problems |  |                         |   |   |   |
| <b>Module:1</b>   | <b>IoT Ecosystem</b>                           | <b>3 hours</b>          |   |   |   |
| Challenges and Levels of implementation - Enabling Technologies - Overview of Processing Elements and Peripherals   |  |                         |   |   |   |
| <b>Module:2</b>   | <b>Programming for Prototyping Boards</b>      | <b>4 hours</b>          |   |   |   |
| Environment: Board, IDE, shields – Programming: syntax, variables, types, operators, constructs and functions – Sketch: skeleton, compile and upload, accessing pins – debugging: UART communication protocol and serial library  |  |                         |   |   |   |
| <b>Module:3</b>   | <b>Interfacing for Prototyping Boards</b>      | <b>5 hours</b>          |   |   |   |
| Circuits: design, wiring, passive components - sensors and actuators: interfacing, read and write - software libraries – shields - interfacing and libraries  |  |                         |   |   |   |
| <b>Module:4</b>   | <b>Programming for Single Board Computers</b>  | <b>4 hours</b>          |   |   |   |
| Board schematic – setup - configure and use - OS implications: linux - basics, file system and processes - shell CLI – GUI - Programming API's - RPi.GPIO - PWM library to access pins -Tkinter.  |  |                         |   |   |   |
| <b>Module:5</b>   | <b>Interfacing with Single Board Computers</b> | <b>5 hours</b>          |   |   |   |
| Networking - Internet Connectivity - Standard Internet Protocols – MQTT – CoAP - Networking Socket Interface - Cloud - Public APIs and SDK's for accessing cloud services - Social Network APIs - Interfacing - sensors and actuators - Pi Camera - Servo - APIs for data conversion.   |  |                         |   |   |   |
| <b>Module:6</b>   | <b>Embedded Programming and RTOS</b>           | <b>4 hours</b>          |   |   |   |
| MCU – GPIO – WDT - timers/counters - I/O - A/D - D/A – PWM – Interrupts – Memory - serial communication UART - I2C – SPI - Peripheral Interfacing OS – basics – types – tasks – process - threads (POSIX Threads) - thread preemption - Preemptive Task Scheduling Policies - Priority Inversion - Task communication - Task Synchronization issues - racing and deadlock - binary and counting semaphores (Mutex example) - choosing RTOS  |  |                         |   |   |   |
| <b>Module:7</b>   | <b>Real World Projects</b>                     | <b>3 hours</b>          |   |   |   |
| IoT Integrated Primary Health Care - Face Detection by AI - Cloud IoT Systems for Smart Agriculture - Smart Home Gadgets - Autonomous Car Features – speed and horn intensity control   |  |                         |   |   |   |
| <b>Module:8</b>   | <b>Contemporary Issues</b>                     | <b>2 hours</b>          |   |   |   |
|   | <b>Total Lecture hours:</b>                    | <b>30 hours</b>         |   |   |   |

| <b>Text Book(s)</b>                                       |   |            |                 |

|  |  | 1.0                     |   |   |   |
| <b>Course Objectives</b>   |  |                         |   |   |   |
| <ol style="list-style-type: none"> <li>1. To learn various threats and attacks in a network.</li> <li>2. To understand and explore fundamental techniques in developing secure applications.</li> <li>3. To learn various methodologies for securing information systems ranging from operating systems to database management systems and to applications.</li> </ol>   |  |                         |   |   |   |
| <b>Course Outcomes</b>   |  |                         |   |   |   |
| After completion of this course, the student shall be able to:   |  |                         |   |   |   |
| <ol style="list-style-type: none"> <li>1. Apply fundamental knowledge on key security concepts, access control and authentication.</li> <li>2. Comprehend the use of security techniques for securing the information.</li> <li>3. Apply various data privacy policies in different areas of web based security systems.</li> <li>4. Differentiate the needs and application of security in Operating System and Firewalls.</li> <li>5. Analyze various method of securing databases.</li> </ol> |  |                         |   |   |   |
| <b>Module:1</b>  | <b>Information Security Concepts</b>     | <b>4 hours</b>          |   |   |   |
| Information Security - Computer Security - Threats - Harm - Vulnerabilities - Program Security - Malicious code - Malwares: Viruses, Trojan Horses and Worms - Counter measures.   |  |                         |   |   |   |
| <b>Module:2</b>  | <b>Authentication and Access Control</b> | <b>6 hours</b>          |   |   |   |
| Authentication - Key management schemes - Hierarchical Key Management Techniques - Security Standards - User Authentication Protocols - Implementing Access Controls - Access Control Models - Role Based Access Control - Attribute Based Access Control - Attribute based Encryption in Information Storage - Physical Access Controls.  |  |                         |   |   |   |
| <b>Module:3</b>  | <b>Operating Systems Security</b>        | <b>7 hours</b>          |   |   |   |
| Security in Operating System - Security in the design of OS: Simplified Design, Layered Design, Kernelized design, Reference Monitor, Trusted Systems, Trusted Systems Functions - Trusted Operating System Design - Rootkit.  |  |                         |   |   |   |
| <b>Module:4</b>  | <b>Security Countermeasures</b>          | <b>7 hours</b>          |   |   |   |
| Design of Firewalls - Types - Personal Firewalls - Configurations - Network Address Translation - Data Loss Prevention - Intrusion Detection and Prevention Systems: Types of IDSs, Intrusion Prevention system, Intrusion Response, Goals of IDSs, Strength and Limitations.  |  |                         |   |   |   |
| <b>Module:5</b>  | <b>Database Security</b>                 | <b>6 hours</b>          |   |   |   |
| Database Security - Database Security Requirements - Reliability and Integrity - Sensitive Data - Types of Disclosures - Preventing Disclosures - Inference - Multilevel Databases - Multilevel Security - Database Attacks - SQL Injection Attacks.   |  |                         |   |   |   |
| <b>Module:6</b>  | <b>Web Security</b>                      | <b>6 hours</b>          |   |   |   |
| Browser Attacks: Types, Failed Identification and Authentication - Misleading and Malicious Web Contents - Protection against Malicious Web Pages - Website Data: Code within Data, Cross Site Scripting Attacks - Prevention of Data Attacks - Fake e-mails - Spam Detection - Phishing Attacks - Phishing URL Detection and Prevention.  |  |                         |   |   |   |
| <b>Module:7</b>  | <b>Privacy Issues</b>                    | <b>7 hours</b>          |   |   |   |
| Privacy Concepts: Aspects of Information Privacy, Computer-Related Privacy Problems - Threats to Personal Data Privacy - People-Based Privacy Concerns - Privacy Principles and Policies - Individual Actions to Protect Privacy - Governments and Privacy - Identify Theft - Privacy issues on the Web Data - Application of Cryptographic Techniques for Privacy Preservation.   |  |                         |   |   |   |
| <b>Module:8</b>  | <b>Contemporary Issues</b>               | <b>2 hours</b>          |   |   |   |
|  | <b>Total Lecture hours:</b>              | <b>45 hours</b>         |   |   |   |

| <p>1. Familiarized with the basic principles for Information Gathering and Detecting Vulnerabilities in the system.</p> <p>2. Gain knowledge about the various attacks caused in an application.</p> <p>3. Acquire knowledge about the tools used for penetration testing.</p> <p>4. Learn the knowledge into practice for testing the vulnerabilities and identifying threats.</p> <p>5. Determine the security threats and vulnerabilities in computer networks using penetration testing techniques.</p> |  |                         |   |   |                 |
| <b>Module:1</b>   | <b>Pentesting Fundamentals</b>                 | <b>5 hours</b>          |   |   |                 |
| Vulnerability Assessment (VA)- Pentesting Analysis (PTA) -Types of Vulnerability Assessments-Modern Vulnerability Management Program-Ethical Hacking terminology- Five stages of hacking- Vulnerability Research - Impact of hacking - Legal implication of hacking - Compare Vulnerability Assessment (VA) and Penetration Testing (PT) Tools.   |  |                         |   |   |                 |
| <b>Module:2</b>   | <b>Information Gathering Methodologies</b>     | <b>5 hours</b>          |   |   |                 |
| Competitive Intelligence- DNS Enumerations- Social Engineering attacks - Scanning and Enumeration. Port Scanning: Network Scanning, Vulnerability Scanning, scanning tools- OS and Fingerprinting Enumeration - System Hacking Password.  |  |                         |   |   |                 |
| <b>Module:3</b>   | <b>System Hacking</b>                          | <b>3 hours</b>          |   |   |                 |
| Password cracking techniques- Key loggers- Escalating privileges- Hiding Files, Active and Passive sniffing - ARP Poisoning - IP Poisoning and MAC Flooding.  |  |                         |   |   |                 |
| <b>Module:4</b>   | <b>Wireless Pentesting</b>                     | <b>4 hours</b>          |   |   |                 |
| Wi-Fi Authentication Modes - Bypassing WLAN Authentication - Types of Wireless Encryption - WLAN Encryption Flaws – Access Point Attacks - Attacks on the WLAN Infrastructure - Buffer Overloading.   |  |                         |   |   |                 |
| <b>Module:5</b>   | <b>The Metasploit Framework</b>                | <b>3 hours</b>          |   |   |                 |
| Metasploit User Interfaces and Setup - Getting Familiar with MSF Syntax - Database Access - Auxiliary Modules- Payloads - Staged vs Non-Staged Payloads - Meterpreter Payloads - Experimenting with Meterpreter.  |  |                         |   |   |                 |
| <b>Module:6</b>   | <b>Web Application Attacks</b>                 | <b>4 hours</b>          |   |   |                 |
| Web Application Assessment Methodology – Enumeration - Inspecting URLs - Inspecting Page Content - Viewing Response Headers - Inspecting Sitemaps - Locating Administration Consoles.   |  |                         |   |   |                 |
| <b>Module:7</b>   | <b>Exploiting Web-Based Vulnerabilities</b>    | <b>4 hours</b>          |   |   |                 |
| Exploiting Admin Consoles - Cross-Site Scripting (XSS) - SQL Injection.   |  |                         |   |   |                 |
| <b>Module:8</b>   | <b>Contemporary Issues</b>                     | <b>2 hours</b>          |   |   |                 |
| <b>Total Lecture hours:</b>   |  |                         |   |   | <b>30 hours</b> |

| <b>Text Book(s)</b>                                       |   |            |                 |

| <b>Course Objectives</b>   |   |                         |   |   |   |
| <ol style="list-style-type: none"> <li>1. To introduce the malware taxonomy and malware analysis tools.</li> <li>2. To identify and analyze malware samples using static, dynamic analysis, and reverse engineering techniques.</li> <li>3. To detect and analyze malicious documents and mobile malware.</li> </ol>   |   |                         |   |   |   |
| <b>Course Outcome</b>  |   |                         |   |   |   |
| After completion of this course, the student shall be able to:   |   |                         |   |   |   |
| <ol style="list-style-type: none"> <li>1. Possess the skills to carry out static and dynamic malware analysis on various malware samples.</li> <li>2. Understand the executable formats, Windows internals, and APIs.</li> <li>3. Apply techniques and concepts to unpack, extract, and decrypt malware.</li> <li>4. Comprehend reverse-engineering of malware and anti-malware analysis techniques.</li> <li>5. Achieve proficiency with industry-standard malware analysis tools.</li> </ol> |   |                         |   |   |   |
| <b>Module:1</b>  | <b>Fundamentals of Malware Analysis</b> | <b>5 hours</b>          |   |   |   |
| Malware taxonomy - Malware analysis techniques – Packed and Obfuscated Malware - Portable Executable File Format: Headers and Sections, Malware Analysis in Virtual Machines - Malware Analysis Tools: ProcMon/ ProcExplore, BinText, FileAlyzer, OllyDbg, etc.  |   |                         |   |   |   |
| <b>Module:2</b>  | <b>Static Analysis</b>                  | <b>4 hours</b>          |   |   |   |
| File signature analysis and Identifying file dependencies -Database of file hashes. String analysis - Local and online malware sandboxing - Levels of Abstraction - x86 Architecture - x86/x86_64 Assembly - Static Analysis Tools: PeiD, Dependency Walker, Resource Hacker.  |   |                         |   |   |   |
| <b>Module:3</b>  | <b>Dynamic Analysis</b>                 | <b>4 hours</b>          |   |   |   |
| Source level vs. Assembly level Debuggers - Kernel vs. User-Mode Debugging – Exceptions - Modifying Execution with a Debugger - Modifying Program Execution in Practice - DLL analysis - Dynamic Analysis Tools: Virustotal, Malware Sandbox, Windows Sysinternals   |   |                         |   |   |   |
| <b>Module:4</b>  | <b>Reverse Engineering</b>              | <b>4 hours</b>          |   |   |   |
| Reverse engineering malicious code - Identifying malware passwords - Bypassing authentication -Advanced malware analysis: Virus, Trojan and APK Analysis - Reverse Engineering Tools: IDA Pro and OLLYDBG  |   |                         |   |   |   |
| <b>Module:5</b>  | <b>Malicious Document Analysis</b>      | <b>3 hours</b>          |   |   |   |
| PDF and Microsoft Office document structures – Identify PDF and office document vulnerabilities - Analysis of suspicious websites - Examining malicious documents: word, XL, PDF, and RTF files - Malware extraction and analysis tools.   |   |                         |   |   |   |
| <b>Module:6</b>  | <b>Anti-Reverse-Engineering</b>         | <b>3 hours</b>          |   |   |   |
| Anti-Disassembly - Anti-Debugging - Anti-Forensic Malware - Packers and Unpacking – Shellcode Analysis - 64-Bit Malware  |   |                         |   |   |   |
| <b>Module:7</b>  | <b>Mobile Malware Analysis</b>          | <b>5 hours</b>          |   |   |   |
| Mobile application penetration testing - Android and iOS Vulnerabilities - Exploit Prevention - Handheld Exploitation - Android Root Spreading and Distribution Android  |   |                         |   |   |   |

|  |   |                             |                 |
|--|---|-----------------------------|-----------------|
| Debugging - Machine learning techniques for malware analysis: Support Vector Machine (SVM), K-Nearest Neighbor (KNN), Random Forest (RF), Decision Trees (DT), Naïve Bayes (NB), and Neural Networks (NN). |   |                             |                 |
| <b>Module:8</b>  | <b>Contemporary Issues</b>  | <b>2 hours</b>              |                 |
|  |   | <b>Total Lecture hours:</b> | <b>30 hours</b> |
| <b>Text Book</b>   |   |                             |                 |

|--|--|-------------------------|---|---|---|---|
|  |  |                         | 0 | 0 | 2 | 1 |
| <b>Pre-requisite</b>   | <b>NIL</b>   | <b>Syllabus version</b> |   |   |   |   |
|  |  | 1.0                     |   |   |   |   |
| <b>Course Objectives</b>   |  |                         |   |   |   |   |
| <ol style="list-style-type: none"> <li>1. To introduce the malware taxonomy and malware analysis tools.</li> <li>2. To identify and analyze malware samples using static, dynamic analysis, and reverse engineering techniques.</li> <li>3. To detect and analyze malicious documents and mobile malware.</li> </ol> |  |                         |   |   |   |   |
| <b>Course Outcome</b>  |  |                         |   |   |   |   |
| After completion of this course, the student shall be able to:   |  |                         |   |   |   |   |
| <ol style="list-style-type: none"> <li>1. Apply techniques and concepts to unpack, extract, and decrypt malware.</li> <li>2. Achieve proficiency with industry-standard malware analysis tools.</li> </ol>   |  |                         |   |   |   |   |
| <b>Indicative Experiments</b>  |  |                         |   |   |   |   |
| 1  | Examining PE Files using PEview, PE explorer and Resource Hacker <ul style="list-style-type: none"> <li>Disassembling Portable Executable (PE32) imports, exports, functions, main address, malicious string locations</li> </ul>  |                         |   |   |   |   |
| 2  | Sandboxing malware using SANDBOX tool, Virus Total Analysis, Anyrun Analysis   |                         |   |   |   |   |
| 3  | Basic malware analysis: <ul style="list-style-type: none"> <li>file compilation date</li> <li>imports/ exports, suspicious strings</li> <li>run-time effect</li> <li>procmon filter</li> <li>hist -based signatures revealing files</li> <li>registry keys, processes, services</li> </ul> network-based signatures                  |                         |   |   |   |   |
| 4  | Advanced static malware analysis <ul style="list-style-type: none"> <li>find address of main, code constructs, suspicious strings,</li> <li>imported functions, their tasks,</li> <li>intention of the malware</li> </ul> impact of the malware via hex code   |                         |   |   |   |   |
| 5  | Analyze the malware using IDA Pro for reverse-engineering the malware: strings analysis, local variables, graph mode to cross-references, Analyzing Functions  |                         |   |   |   |   |
| 6  | Analyze the malware using OllyDbg: Debug the malware, Viewing Threads and Stacks, OllyDbg Code-Execution Options, Breakpoints, Loading DLLs, Exception Handling  |                         |   |   |   |   |
| 7  | Advanced analysis of Windows programs for processes, interactive remote shell, uploaded file, address of the subroutine, return value, Windows APIs  |                         |   |   |   |   |
| 8  | Malware behavior analysis <ul style="list-style-type: none"> <li>finding the source of malware</li> <li>persistence mechanism, multiple instances replication mechanisms, hiding strategies</li> <li>API calls for keylogging, constants involved</li> </ul> post-infection actions of the malware, mutex, SendMessage API structure |                         |   |   |   |   |
| 9  | Malware self-defense, packing and unpacking, obfuscation and de-obfuscation using Packers and obfuscation tools  |                         |   |   |   |   |
| 10   | Anti-disassembly and anti-debugging techniques used in the binary by patching the PE, set a breakpoint in the malicious subroutine   |                         |   |   |   |   |
| 11   | Analyzing malicious Microsoft Office and Adobe PDF documents to locate malicious   |                         |   |   |   |   |

|   |  |            |                 |
|---|--|------------|-----------------|
|   | embedded code such as shellcode, VBA macros or JavaScript, disassemble and/ or debug, shellcode analysis   |            |                 |

| <b>Course Objectives</b>  |  |  |  |                         |   |   |   |
| <ol style="list-style-type: none"> <li>1. To present a comprehensive perception of digital forensic principles, collection, preservation, and analysis of digital evidence.</li> <li>2. To enlighten the importance of forensic procedures, legal considerations, digital evidence controls, and the documentation of forensic analysis.</li> <li>3. To develop a comprehension of the different tools and methods for conducting digital forensic acquisition and analysis.</li> </ol>   |  |  |  |                         |   |   |   |
| <b>Course Outcomes</b>  |  |  |  |                         |   |   |   |
| After completion of this course, the student shall be able to:  |  |  |  |                         |   |   |   |
| <ol style="list-style-type: none"> <li>1. Understand the responsibilities and liabilities of a computer forensic investigator</li> <li>2. Seize a computer from a crime scene without damage and follow the legal procedures and standards.</li> <li>3. Demonstrate the ability to perform forensic data acquisition and analysis.</li> <li>4. Analyze and retrieve hidden and damaged files from different operating systems.</li> <li>5. Apply forensics to recent technologies such as smart phones, email, cloud and social media.</li> </ol> |  |  |  |                         |   |   |   |
| <b>Module:1</b>   | <b>Understanding Digital Forensics and Legal Aspects</b> |  |  | <b>3 hours</b>          |   |   |   |
| Understanding computer forensics - Preparing for computer investigation – Maintaining professional conduct – understanding computer investigations – Taking a systematic approach – Corporate Hi-Tech investigations – Conducting an investigation.   |  |  |  |                         |   |   |   |
| <b>Module:2</b>   | <b>Acquisition and Storage of Data</b>                   |  |  | <b>4 hours</b>          |   |   |   |
| Understanding Storage Formats for Digital Evidence - Determining the Best Acquisition Method - Contingency Planning for Image Acquisitions - Using Acquisition Tools - Validating Data Acquisitions - Performing RAID Data Acquisitions - Using Remote Network Acquisition Tools - Storing Digital Evidence - Obtaining a Digital Hash - Sample Cases.  |  |  |  |                         |   |   |   |
| <b>Module:3</b>   | <b>Working with Windows</b>                              |  |  | <b>5 hours</b>          |   |   |   |
| Understanding File Systems - Exploring Microsoft File Structures - Examining NTFS Disks - Understanding Whole Disk Encryption - Understanding the Windows Registry - Understanding Microsoft Startup Tasks - Understanding MS-DOS Startup Tasks - Evaluating Computer Forensics Tool Needs - Computer Forensics Software and Hardware Tools.  |  |  |  |                         |   |   |   |
| <b>Module:4</b>   | <b>Working with Linux/Unix Systems</b>                   |  |  | <b>4 hours</b>          |   |   |   |
| UNIX and Linux Overview - Inodes - Boot Process - Drives and Partition Schemes - Examining disk Structures - Understanding Other Disk Structures - Ownership and Permissions, File Attributes, Hidden Files, User Accounts - Case studies - Validating Forensic Data – Addressing Data-Hiding Techniques – Locating and Recovering Graphics File.   |  |  |  |                         |   |   |   |
| <b>Module:5</b>   | <b>Email and Social Media Forensics</b>                  |  |  | <b>4 hours</b>          |   |   |   |
| Investigating E-mail crimes and Violations – Applying Digital Forensics Methods to Social Media Communications - Social Media Forensics on Mobile Devices - Forensics Tools for Social Media Investigations.  |  |  |  |                         |   |   |   |
| <b>Module:6</b>   | <b>Mobile Forensics</b>                                  |  |  | <b>4 hours</b>          |   |   |   |
| Mobile phone basics – Acquisition procedures for mobile - Android Device –Android Malware – SIM Forensic Analysis – Case study.   |  |  |  |                         |   |   |   |
| <b>Module:7</b>   | <b>Cloud Forensics</b>                                   |  |  | <b>4 hours</b>          |   |   |   |

|   |   |                 |            |
|---|---|-----------------|------------|
| Working with the cloud vendor, obtaining evidence, reviewing logs and APIs. |   |                 |            |
| <b>Module:8</b>   | <b>Contemporary Issues</b>  | <b>2 hours</b>  |            |

|   |   | 1.0                     |          |          |          |
| <b>Course Objectives</b>  |   |                         |          |          |          |
| <p>1. To understand the basic principles, characteristics, various approaches and applications of digital watermarking and steganography.</p> <p>2. To apply digital watermarking techniques as an authentication tool for distribution of content over the Internet and steganography techniques for covert communication.</p> <p>3. To impart knowledge on the basics of the counter measures like steganalysis for assessing the data hiding methods.</p>  |   |                         |          |          |          |
| <b>Course Outcome</b>   |   |                         |          |          |          |
| After completion of this course, the student shall be able to:  |   |                         |          |          |          |
| <p>1. Learn the fundamental concepts, principles, characteristics and performance measures of digital watermarking and steganography.</p> <p>2. Acquire the various concepts of watermarking for digital authentication and authorization schemes related to electronic documents, image and video.</p> <p>3. Gathering the various concepts of steganography to access the sensitive information concealing of message, image, audio or video within another file.</p> <p>4. Design and implement efficient data hiding methods against steganalysis techniques.</p> |   |                         |          |          |          |
| <b>Module:1</b>   | <b>Fundamentals of Digital Watermarking</b>             | <b>6 hours</b>          |          |          |          |
| Importance of Watermarking - Application and Properties of Watermarking - Models of Watermarking - Basic Message Coding: Mapping Message into Message Vectors, Error Correction Coding - Watermarking with Side Information - Analyzing Errors.   |   |                         |          |          |          |
| <b>Module:2</b>   | <b>Digital Watermarking Schemes</b>                     | <b>7 hours</b>          |          |          |          |
| Spatial Domain: Correlation based Watermarking, Least Significant bit Watermarking - Frequency domain: Discrete Wavelet Transform Watermarking, Discrete Fourier Transform Watermarking, Discrete Cosine Watermarking, Quantization Watermarking, Haar Transform Watermarking, Hadamard Transform Watermarking - Robust Watermarking - Fragile and Semi Fragile Watermarking.   |   |                         |          |          |          |
| <b>Module:3</b>   | <b>Digital Watermarking Security and Authentication</b> | <b>5 hours</b>          |          |          |          |
| Watermarking Security: Security Requirements, Watermark Security and Cryptography, Watermarking Attacks and Tools - Content Authentication: Exact Authentication, Selective Authentication, Localization, Restoration.  |   |                         |          |          |          |
| <b>Module:4</b>   | <b>Steganography</b>                                    | <b>7 hours</b>          |          |          |          |
| Basics and Importance of Steganography - Applications and Properties of Steganography - Steganography: LSB embedding, Steganography in palette images -Steganography in JPEG images: JSteg data hiding in spatial and transform domain -Steganography Security.   |   |                         |          |          |          |
| <b>Module:5</b>   | <b>Audio and Video Steganography</b>                    | <b>6 hours</b>          |          |          |          |
| Audio Steganography: Temporal domain techniques, Transform domain techniques, Cepstral Domain - Video Steganography: Introduction Video Streams, Substitution-Based Techniques, Transform Domain Techniques, Adaptive Techniques, Format-Based Techniques - Cover Generation Techniques Video Quality Metrics - Perceptual Transparency Analysis - Robustness against Compression and Manipulation.   |   |                         |          |          |          |
| <b>Module:6</b>   | <b>Wet Paper Code</b>                                   | <b>6 hours</b>          |          |          |          |
| Random Linear Codes - LT Codes - Perturbed Quantization, Matrix Embedding - Matrix Embedding Theorem - Binary Hamming Codes - Q-Ary Case Random Linear Codes for Large Payloads.  |   |                         |          |          |          |
| <b>Module:7</b>   | <b>Steganalysis</b>                                     | <b>6 hours</b>          |          |          |          |
| Steganalysis Principles - Statistical Steganalysis: Steganalysis as detection problem,  |   |                         |          |          |          |

|  |  |                             |                 |
|--|--|-----------------------------|-----------------|
| Modeling images using features, Receiver operating Characteristics - Targeted Steganalysis : Sample pair analysis, Targeted attack on F5 using Calibration, Targeted attack on $\pm$ embedding - Blind Steganalysis: Features for steganalysis of JPEG images (cover vs all-stego and one class neighbor machine). |  |                             |                 |
| <b>Module:8</b>  | <b>Contemporary Issues</b>   |                             | <b>2 hours</b>  |
|  |  | <b>Total Lecture hours:</b> | <b>45 hours</b> |

| <ol style="list-style-type: none"> <li>To understand building blocks of Blockchain.</li> <li>To significance of Distributed Ledger Technology and Smart Contract.</li> <li>To exploit applications of Blockchain in real world scenarios and their impacts.</li> </ol>  |   |                         |   |   |   |
| <b>Course Outcomes</b>  |   |                         |   |   |   |
| After completion of this course, the student shall be able to:  |   |                         |   |   |   |
| <ol style="list-style-type: none"> <li>Understand Blockchain ecosystem and its services in real world sceneries</li> <li>Apply and Analyze the requirement of Distributed Ledger Technology and Smart Contract</li> <li>Design and Demonstrate end-to-end decentralized applications</li> <li>Acquaint the protocol and assess their computational requirements</li> </ol>  |   |                         |   |   |   |
| <b>Module:1</b>   | <b>Foundations of Blockchain</b>  | <b>7 hours</b>          |   |   |   |
| Blockchain Architecture – Challenges – Applications – Blockchain Design Principles -The Blockchain Ecosystem - The consensus problem - Asynchronous Byzantine Agreement - AAP protocol and its analysis - peer-to-peer network – Abstract Models - GARAY model - RLA Model - Proof of Work (PoW) - Proof of Stake (PoS) based Chains - Hybrid models.   |   |                         |   |   |   |
| <b>Module:2</b>   | <b>Distributed Ledger Technology</b>  | <b>6 hours</b>          |   |   |   |
| Origin of Ledgers – Types and Features of Distributed Ledger Technology (DLT) - Role of Consensus Mechanism - DLT Ecosystem - Distributed Ledger Implementations – Blockchain - Ethereum - Public and Private Ledgers – Registries – Ledgers - Practitioner Perspective: Keyless Technologies, Transparency as a Strategic Risk, Transparency as a Strategic Asset, Usage of Multiple IDs - Zero Knowledge Proofs - Implementation of Public and Private Blockchain |   |                         |   |   |   |
| <b>Module:3</b>   | <b>Smart Contracts</b>  | <b>5 hours</b>          |   |   |   |
| Anatomy of a Smart Contracts - Life Cycle - Usage Patterns - DLT-based smart contracts - Use Cases: Healthcare Industry and Property Transfer.  |   |                         |   |   |   |
| <b>Module:4</b>   | <b>Decentralized Organization</b>   | <b>5 hours</b>          |   |   |   |
| Decentralization versus Distribution - Centralized-distributed (Ce-Di) organizations - Decentralized-distributed (De-Di) organizations - Decentralized Autonomous Organizations: Aragon, DAOstack, DAOhaus and Colony.  |   |                         |   |   |   |
| <b>Module:5</b>   | <b>Types of Blockchain Ecosystem</b>  | <b>7 hours</b>          |   |   |   |
| One-Leader Ecosystem - Joint Venture or Consortia Ecosystems - Regulatory Blockchain Ecosystems - Components in Blockchain Ecosystem: Leaders, Core Group, Active Participants, Users, Third-Party Service Providers - Governance for Blockchain Ecosystems.  |   |                         |   |   |   |
| <b>Module:6</b>   | <b>Blockchain Protocols</b>   | <b>6 hours</b>          |   |   |   |
| Ethereum tokens – Augur - Golem - Understanding Ethereum tokens - App Coins and Protocol Tokens - Blockchain Token Securities Law Framework - Token Economy - Token sale structure - Ethereum Subreddit.  |   |                         |   |   |   |
| <b>Module:7</b>   | <b>High Performance Computing</b>   | <b>7 hours</b>          |   |   |   |
| Integrity of High Performance Systems - Data Provenance - Cluster Construction and Deployment - Mock Workload - Blockchain Software Evaluation - Blockchain storage of Integrity Data.  |   |                         |   |   |   |
| <b>Module:8</b>   | <b>Contemporary Issues</b>  | <b>2 hours</b>          |   |   |   |

| After completion of this course, the student shall be able to:  |  |  |  |                         |      |            |   |
| 1. Understand the fundamentals of Cryptography.<br>2. Gain knowledge about various operations associated with Cryptocurrency.<br>3. Develop the methods for verification and validation of Bitcoin transactions.<br>4. Apply the principles, practices and policies associated with Bitcoin business. |  |  |  |                         |      |            |   |
| <b>Module:1</b>   | <b>Fundamentals of Cryptography</b>  |  |  | <b>5 hours</b>          |      |            |   |
| Cryptographic Hash Functions - Hash Pointers and Data Structures - Digital Signatures - Public Keys as Identities - A Simple Cryptocurrency.  |  |  |  |                         |      |            |   |
| <b>Module:2</b>   | <b>Features of Bitcoin</b>   |  |  | <b>6 hours</b>          |      |            |   |
| Bitcoin Transactions - Bitcoin Scripts - Applications of Bitcoin Scripts - Bitcoin Blocks - Bitcoin Network and Limitations.  |  |  |  |                         |      |            |   |
| <b>Module:3</b>   | <b>Bitcoin Techniques</b>  |  |  | <b>7 hours</b>          |      |            |   |
| Techniques to Store and Use Bitcoins - Hot and Cold Storage - Splitting and Sharing Keys - Online Wallets and Exchanges - Payment Services - Transaction Fees - Bitcoin Trading.  |  |  |  |                         |      |            |   |
| <b>Module:4</b>   | <b>Bitcoin Mining</b>  |  |  | <b>8 hours</b>          |      |            |   |
| Task of Bitcoin Miners - Mining Hardware - Energy Consumption and Ecology - Mining Pools - Mining Incentives - Merkle Tree - hardness of mining - transaction verifiability.  |  |  |  |                         |      |            |   |
| <b>Module:5</b>   | <b>Bitcoin and Anonymity</b>   |  |  | <b>5 hours</b>          |      |            |   |
| Anonymity – Re-identification of Bitcoin - Mixing and Decentralisation of Bitcoin - Zero coin and Zero cash.  |  |  |  |                         |      |            |   |
| <b>Module:6</b>   | <b>Mining Strategies</b>   |  |  | <b>5 hours</b>          |      |            |   |
| Essential Puzzle Requirements – Application Specific Integrated Circuit Resistant(ASIC) Puzzles - Proof of Volunteer computing - Non externalization of Puzzles - Proof of Stake Virtual Mining.  |  |  |  |                         |      |            |   |
| <b>Module:7</b>   | <b>Bitcoin as a Platform</b>   |  |  | <b>7 hours</b>          |      |            |   |
| Bitcoin as an Append-Only Log - Bitcoin as Smart Property - Secure Multi-Party Lotteries in Bitcoin - Bitcoin as Randomness Source - Prediction Markets and Real-World Data Feeds.  |  |  |  |                         |      |            |   |

| <b>Course Objectives</b>  |  |                         |   |   |                 |
| 1. To provide the knowledge on Blockchain architecture.<br>2. To understand the design of Blockchain transaction and security issues.<br>3. To study about various use Cases in Blockchain.   |  |                         |   |   |                 |
| <b>Course Outcome</b>   |  |                         |   |   |                 |
| After completion of this course, the student shall be able to:<br>1. Understand the requirements of the fundamentals of Blockchain.<br>2. Identify and apply the concept of Bitcoin.<br>3. Recognize the underlying technology of transactions, blocks and proof-of-work.<br>4. Gain a deep insight into Bitcoin network, Bitcoin miners and Bitcoin transactions.<br>5. Design and explore the applications of Blockchain. |  |                         |   |   |                 |
| <b>Module:1</b>   | <b>Fundamentals of Blockchain</b>  | <b>6 hours</b>          |   |   |                 |
| Blockchain: Importance and features – Layers of Blockchain: application layer, execution layer, semantic layer, propagation layer, consensus layer – Types of Blockchain – Blockchain in practical use today – Blockchain governance challenges – Blockchain technical challenges.  |  |                         |   |   |                 |
| <b>Module:2</b>   | <b>Blockchain for Enterprise</b>   | <b>6 hours</b>          |   |   |                 |
| Blockchain Components and Concepts - Block Header and Identifiers - Linking Blocks in the Blockchain - Mining and Consensus: Aggregating transactions into Blocks - Mining the Block - Validating and Assembling of Blocks, Selecting Chains of Blocks.   |  |                         |   |   |                 |
| <b>Module:3</b>   | <b>Transactions and Bitcoin Network</b>  | <b>6 hours</b>          |   |   |                 |
| Transactions: Lifecycle, Structure, Inputs and Outputs, Standard Transactions - Bitcoin Network: Network discovery for a new node, Block propagation.   |  |                         |   |   |                 |
| <b>Module:4</b>   | <b>Bitcoin Client</b>  | <b>8 hours</b>          |   |   |                 |
| Consensus in Bitcoin: Proof of Work (PoW), Mining the Block, Changing the Consensus Rules - Bitcoin Core: Bitcoin core application programming interface, running a bitcoin core node, Alternative clients, libraries and toolkits - Bitcoin Addresses: Implementing Keys and Addresses in Python – Wallets.  |  |                         |   |   |                 |
| <b>Module:5</b>   | <b>Security and privacy practices</b>  | <b>6 hours</b>          |   |   |                 |
| Security Architecture principles - Technical and inherent risks of the blockchain technology - Attacks on Privacy: Blockchain and non-blockchain based Attacks - Risks and Limitations of Blockchain – User security best practices: physical bitcoin storage, hardware wallets, balancing risk, diversifying risk, multi signature and governance.   |  |                         |   |   |                 |
| <b>Module:6</b>   | <b>Blockchain Architecture and Applications</b>  | <b>6 hours</b>          |   |   |                 |
| Design methodology for blockchain applications: blockchain application templates, blockchain application development – Ethereum – Solidity - Deploying a sample application: Blockchain and betting – Colored coins – Counterparty.   |  |                         |   |   |                 |
| <b>Module:7</b>   | <b>Blockchain Use Cases</b>  | <b>5 hours</b>          |   |   |                 |
| Blockchain in Financial Software and Systems - Supply chain and logistics monitoring - Music royalties tracking - Advertising insights - Blockchain implementation for Land Records - Digital content publishing and selling - Digital Supply chain - Medical Record Management System  |  |                         |   |   |                 |
| <b>Module:8</b>   | <b>Contemporary Issues</b>   | <b>2 hours</b>          |   |   |                 |
| <b>Total Lecture hours:</b>   |  |                         |   |   | <b>45 hours</b> |

| <b>Course Objectives</b>   |   |  |  |                         |   |   |   |
| <ol style="list-style-type: none"> <li>1. To understand the Smart Contracts in Blockchain.</li> <li>2. To learn the tools and programming skills required to generate Smart Contracts.</li> <li>3. To assess the efficiency of the security issues.</li> </ol>   |   |  |  |                         |   |   |   |
| <b>Course Outcomes</b>   |   |  |  |                         |   |   |   |
| After completion of this course, the student shall be able to: <ol style="list-style-type: none"> <li>1. Understand the basics and objectives of Smart Contracts in a Blockchain.</li> <li>2. Evaluate the various functionalities and features in an Ethereum to generate Smart Contracts.</li> <li>3. Introduce the Solidity language in creation of a Smart Contracts.</li> <li>4. Incorporate Smart Contracts in decentralized applications.</li> <li>5. Assess the security issues and effectiveness of a Smart Contracts in real world scenarios.</li> </ol> |   |  |  |                         |   |   |   |
| <b>Module:1</b>  | <b>Fundamentals of Smart Contracts</b>  |  |  | <b>2 hours</b>          |   |   |   |
| Blockchain Terminologies - Cryptocurrency and Smart Contracts - Understanding the Virtual Machine of a Blockchain - Terminology, concepts and practices in Smart Contracts.  |   |  |  |                         |   |   |   |
| <b>Module:2</b>  | <b>Ethereum Smart Contracts</b>   |  |  | <b>5 hours</b>          |   |   |   |
| Definition of Ethereum - Prevalence of the Ethereum blockchain in Smart Contracts development - Ethereum Virtual Machine (EVM) - Instances of working Ethereum Smart Contracts.  |   |  |  |                         |   |   |   |
| <b>Module:3</b>  | <b>Various Aspects in Application of Smart Contracts</b>  |  |  | <b>5 hours</b>          |   |   |   |
| Market impact and scientific innovation – Trust - Security, using Merkle Trees - Future-resistance features in Smart Contracts applications - Workflow of developing a Smart Contracts - Execution environments in writing a Smart Contracts.  |   |  |  |                         |   |   |   |
| <b>Module:4</b>  | <b>Solidity Language Basics</b>   |  |  | <b>4 hours</b>          |   |   |   |
| Layout of a Solidity Source File - Structure of a contracts - Control structures – Functions - Scoping and declarations.   |   |  |  |                         |   |   |   |
| <b>Module:5</b>  | <b>Solidity with Contracts</b>  |  |  | <b>4 hours</b>          |   |   |   |
| Creating contracts - Object-oriented high level language features - Visibility and Getters – Events - Abstract Contracts.  |   |  |  |                         |   |   |   |
| <b>Module:6</b>  | <b>Decentralized Applications</b>   |  |  | <b>4 hours</b>          |   |   |   |
| Decentralized Application Architecture - Connecting to the Blockchain and Smart Contracts – Building dApps – Deployment.   |   |  |  |                         |   |   |   |
| <b>Module:7</b>  | <b>Security Issues</b>  |  |  | <b>4 hours</b>          |   |   |   |
| Shifting from Trust-in-People to Trust-in-Code - Data permanence - Selective-Obcurity - Security counter measures.   |   |  |  |                         |   |   |   |
| <b>Module:8</b>  | <b>Contemporary Issues</b>  |  |  | <b>2 hours</b>          |   |   |   |
|  | <b>Total Lecture hours:</b>   |  |  | <b>30 hours</b>         |   |   |   |

| Cryptocurrency - Origin and Importance - Legal Status - Usage of Cryptocurrency - Blockchain Structure - Interaction between Blockchain and Cryptocurrencies - Importance and uses of Cryptocurrency - Hardware and Software requirements of Block chain.  |                             |  |   |   |                |  |
| <b>Module:2</b>  |                             | <b>Functional Aspects of Cryptocurrency</b>            |   |   | <b>8 hours</b> |  |
| Bitcoin and other Cryptocurrencies - Distributed consensus and atomic broadcast - Alternatives to Bitcoin consensus - Alternative coins - Byzantine fault-tolerant consensus methods - Blockchain based cryptocurrency and its applications - Technologies borrowed in Blockchain.   |                             |  |   |   |                |  |
| <b>Module:3</b>  |                             | <b>Bitcoin Scripting</b>                               |   |   | <b>5 hours</b> |  |
| Bitcoin scripting language and their uses - Transactions - Signatures - Pay to script hash - Segregated Witness - Pay To Multi-signature - Storing Data - Timelocks - Hash Time-Locked Contracts - Atomic Swaps - Payment Channels.  |                             |  |   |   |                |  |
| <b>Module:4</b>  |                             | <b>Crypto Primitives for Cryptocurrency</b>            |   |   | <b>5 hours</b> |  |
| Hash functions - Puzzle-friendly Hash - Collision resistant hash - Hash pointers and digital signatures - public key crypto - verifiable random functions - Zero-knowledge systems - Bitcoin Blockchain - Interaction with the blockchain - Elliptic curve cryptography in blockchain - SHA-256.   |                             |  |   |   |                |  |
| <b>Module:5</b>  |                             | <b>Security &amp; Privacy Issues in Cryptocurrency</b> |   |   | <b>4 hours</b> |  |
| Building a Secure Bitcoin payment system - Building a Secure payment gateway - Compiling Bitcoin from source new cryptocurrency - Cloning Bitcoin - Reader coin rebranding - Securing Peer-to-Peer Auctions in Ethereum - Applications of blockchain in cyber security.  |                             |  |   |   |                |  |
| <b>Module:6</b>  |                             | <b>Building Own Cryptocurrency</b>                     |   |   | <b>7 hours</b> |  |
| Coding Own Cryptocurrency on Ethereum - Building ERC-20 Token - Integrity of information - E-Governance and other contract enforcement mechanisms - Limitations of blockchain - Myths vs. reality of blockchain technology.  |                             |  |   |   |                |  |
| <b>Module:7</b>  |                             | <b>Future Directions of Cryptocurrency</b>             |   |   | <b>7 hours</b> |  |

|   |   |                             |                 |
|---|---|-----------------------------|-----------------|
| Smart Property - Efficient micro-payments - Coupling Transactions and Payment (Interdependent Transactions) - Public Randomness Source Prediction Markets - Escrow transactions - Green addresses - Auctions and Markets - Multi-party Lotteries. |   |                             |                 |
| <b>Module:8</b>   | <b>Contemporary Issues</b>  |                             | <b>2 hours</b>  |
|   |   | <b>Total Lecture hours:</b> | <b>45 hours</b> |
| <b>Text Book</b>  |   |                             |                 |

| <b>Pre-requisite</b>   | NIL   | <b>Syllabus version</b> |   |   |                 |
|  |   | 1.0                     |   |   |                 |
| <b>Course Objectives</b>   |   |                         |   |   |                 |
| 1. To understand Blockchain and Distributed Ledger Technologies.<br>2. To learn the development in Blockchain functionalities.<br>3. To identify alternative techniques to proof of work for Blockchain protocols, proof of stake/space.   |   |                         |   |   |                 |
| <b>Course Outcomes</b>   |   |                         |   |   |                 |
| After completion of this course, the student shall be able to:   |   |                         |   |   |                 |
| 1. Comprehend the functionality of blockchain.<br>2. Choose a blockchain implementation based on real time scenario.<br>3. Examine the techniques for anonymity preservation.<br>4. Determine the Blockchain challenges.<br>5. Identify the use cases of distributed ledger technology.<br>6. Evaluate alternative blockchain and their applicability.                                 |   |                         |   |   |                 |
| <b>Module:1</b>  | <b>Blockchain and Distributed Ledger Fundamentals</b>                         | <b>4 hours</b>          |   |   |                 |
| Blockchain - Distributed Ledger - Cryptographic basics for cryptocurrency - signature schemes, encryption schemes and elliptic curve cryptography - CAP theorem - Categories of Blockchain: Public blockchain, Private blockchain, Permissioned Ledger, Tokenized blockchain, Tokenless blockchain, and Sidechains.  |   |                         |   |   |                 |
| <b>Module:2</b>  | <b>Blockchain Functionality</b>   | <b>5 hours</b>          |   |   |                 |
| Distributed identity: Public and private keys, Digital identification and wallets - Decentralized network - Permissioned distributed Ledger - Blockchain data structure - Double spending - Network consensus - Sybil attacks - Block rewards and miners - Forks and consensus chain - Finality in Blockchain Consensus - Limitation of proof-of-work - Alternatives to Proof of Work. |   |                         |   |   |                 |
| <b>Module:3</b>  | <b>Blockchain Implementation</b>  | <b>4 hours</b>          |   |   |                 |
| Bitcoin and Merkle Root - Eventual Consistency and Bitcoin - Byzantine Fault Tolerance - Bitcoin and Secure Hashing - Bitcoin block-size - Bitcoin Mining - Blockchain Collaborative Implementations: Hyperledger, Corda - Ethereum's ERC 20 and token explosion.  |   |                         |   |   |                 |
| <b>Module:4</b>  | <b>Decentralization using Blockchain</b>                                      | <b>4 hours</b>          |   |   |                 |
| Blockchain and full ecosystem decentralization: Smart contract, Decentralized autonomous organization (DAO), Decentralized applications - Platforms for decentralization.  |   |                         |   |   |                 |
| <b>Module:5</b>  | <b>Zero Knowledge Proofs and Protocols in Blockchain</b>                      | <b>4 hours</b>          |   |   |                 |
| Pseudo-anonymity vs. anonymity - Succinct non interactive argument for Knowledge (SNARK) - pairing on Elliptic curves - Zcash - Zk-SNARKS for anonymity preservation.  |   |                         |   |   |                 |
| <b>Module:6</b>  | <b>Blockchain Challenges</b>  | <b>3 hours</b>          |   |   |                 |
| Blockchain Governance Challenges: Bitcoin Blocksize Debate, The Ethereum DAO Fork, Ethereum's Move to PoS and Scaling Challenges - Blockchain Technical Challenges: Denial-of-Service Attacks, Security in Smart Contracts, Scaling, Sharding.   |   |                         |   |   |                 |
| <b>Module:7</b>  | <b>Distributed Ledger Technology in Alternative Blockchain</b>                | <b>4 hours</b>          |   |   |                 |
| Kadena, Ripple, Stellar, Rootstock, Drivechain, Quorum - Decentralized Network manager: Tezos, Maidsafe, BigChainDB - Decentralized Cloud Storage: Storj.  |   |                         |   |   |                 |
| <b>Module:8</b>  | <b>Contemporary Issues</b>  | <b>2 hours</b>          |   |   |                 |
| <b>Total Lecture hours:</b>  |   |                         |   |   | <b>30 hours</b> |

| <b>Module Content</b>  |                           |                         |          |            |          |
| The student is expected to simulate and critically analyse the working of a real system. Role of different variables which affect the system has to be studied extensively such that the impact of each step in the process is understood, thereby the performance of each step of the engineering process is evaluated. |                           |                         |          |            |          |

|   |   | <b>1.0</b>              |          |          |                 |
| <b>Course Objectives</b>  |   |                         |          |          |                 |
| 1. Introduce the fundamentals of physical systems modelling and control of linear time invariant systems.   |   |                         |          |          |                 |
| 2. Teach the practical control system design with realistic system specifications.  |   |                         |          |          |                 |
| 3. Impart knowledge of state variable models and state feedback design.   |   |                         |          |          |                 |
| <b>Course Outcome</b>   |   |                         |          |          |                 |
| On the completion of this course, the student will be able to:  |   |                         |          |          |                 |
| 1. Formulate mathematical models of the physical systems.   |   |                         |          |          |                 |
| 2. Analyze the system performance in time and frequency domains.  |   |                         |          |          |                 |
| 3. Determine the stability of linear time invariant system in time and frequency domains.   |   |                         |          |          |                 |
| 4. Design compensators and controllers to meet the performance specifications.  |   |                         |          |          |                 |
| 5. Perform state space analysis and design state feedback control.  |   |                         |          |          |                 |
| <b>Module:1</b>   | <b>Systems and their Representations</b>  | <b>6 hours</b>          |          |          |                 |
| Basic elements in control systems: open loop and closed loop, transfer functions of mechanical, electrical and electro-mechanical systems, electrical analogous systems; Block diagram reduction, signal flow graphs.                 |   |                         |          |          |                 |
| <b>Module:2</b>   | <b>Time Response Analysis</b>   | <b>6 hours</b>          |          |          |                 |
| Standard test signals, time response of first and second order systems, time domain specifications; Steady state error, static error constants and system type.   |   |                         |          |          |                 |
| <b>Module:3</b>   | <b>Stability Analysis and Root Locus</b>  | <b>6 hours</b>          |          |          |                 |
| Stability: concept and definition, characteristic equation, location of poles, Routh Hurwitz criterion; Root locus technique: construction, properties and applications.  |   |                         |          |          |                 |
| <b>Module:4</b>   | <b>Frequency Response Analysis</b>  | <b>6 hours</b>          |          |          |                 |
| Frequency domain specifications; Bode plot, Polar plot; Correlation between frequency domain and time domain specifications.  |   |                         |          |          |                 |
| <b>Module:5</b>   | <b>Stability in Frequency Domain</b>  | <b>5 hours</b>          |          |          |                 |
| Relative stability: gain margin, phase margin; stability analysis using frequency response methods; Nyquist stability criterion.  |   |                         |          |          |                 |
| <b>Module:6</b>   | <b>Compensators and Controllers</b>   | <b>7 hours</b>          |          |          |                 |
| Realization of basic compensators, cascade compensation in time domain and frequency domain, feedback compensation, design of lag, lead, lag-lead series compensators using Bode plot; P, PI and PID controllers in frequency domain. |   |                         |          |          |                 |
| <b>Module:7</b>   | <b>State Space Analysis</b>   | <b>7 hours</b>          |          |          |                 |
| Concepts of state variable and state model, solution of state equation, state space to transfer function conversion, state space decomposition methods, controllability, observability, pole placement control, observer design.      |   |                         |          |          |                 |
| <b>Module:8</b>   | <b>Contemporary Issues</b>  | <b>2 hours</b>          |          |          |                 |
|   |   |                         |          |          |                 |
| <b>Total Lecture hours:</b>   |   |                         |          |          | <b>45 hours</b> |

| On the completion of this course, the student will be able to:<br>1. Design feedback control for meeting system specifications.<br>2. Analyze the stability and response of linear time invariant systems.<br>3. Perform the time and frequency domain analyses of first and second order systems. |   |  |        |                         |            |                        |          |
| <b>Indicative Experiments</b>  |   |  |        |                         |            |                        |          |
| 1.   | Simulation study of block diagram reduction technique                               |  |        |                         |            |                        |          |
| 2.   | Determination of time domain specifications   |  |        |                         |            |                        |          |
| 3.   | Study of first and second order electrical networks                                 |  |        |                         |            |                        |          |
| 4.   | Stability analysis of linear systems  |  |        |                         |            |                        |          |
| 5.   | PID controller design using Bode plot   |  |        |                         |            |                        |          |
| 6.   | PID controller design using root locus  |  |        |                         |            |                        |          |
| 7.   | Compensator design in frequency and time domains                                    |  |        |                         |            |                        |          |
| 8.   | Analysis of controllability and observability properties of a system                |  |        |                         |            |                        |          |
| 9.   | Lag compensator design for linear servo motor for speed control application         |  |        |                         |            |                        |          |
| 10.  | Pole placement controller design for inverted pendulum                              |  |        |                         |            |                        |          |
| 11.  | PD controller design for position control of servo plant                            |  |        |                         |            |                        |          |
| 12.  | Cascade control design for ball and beam system                                     |  |        |                         |            |                        |          |
| 13.  | PID controller design for magnetic levitation system                                |  |        |                         |            |                        |          |
| 14.  | Determination of transfer function of separately excited DC generator               |  |        |                         |            |                        |          |
| 15.  | Identification of transfer function of field-controlled separately excited DC Motor |  |        |                         |            |                        |          |
| 16.  | Controller realization from MATLAB / SIMULINK using Embedded Coder                  |  |        |                         |            |                        |          |
|  |   |  |        |                         |            | Total Laboratory Hours | 30 hours |
| Mode of assessment: Continuous assessment, FAT   |   |  |        |                         |            |                        |          |

Analyze the principles of applied chemistry in solving the societal issues.</li> <li>3. Apply chemical concepts for the advancement of materials.</li> <li>4. Appreciate the fundamental principles of spectroscopy and the related applications.</li> <li>5. Design new materials, energy conversion devices and new protective coating techniques.</li> </ol>   |  |                         |   |   |   |
| <b>Module:1</b>  | <b>Chemical thermodynamics and kinetics</b>                  | <b>6 hours</b>          |   |   |   |
| Laws of thermodynamics - entropy change (selected processes) – spontaneity of a chemical reaction and Gibbs free energy - heat transfer; Kinetics - Concept of activation energy and energy barrier - Arrhenius equation- effect of catalysts (homo and heterogeneous) – Enzyme catalysis (Michaelis-Menten Mechanism).  |  |                         |   |   |   |
| <b>Module:2</b>  | <b>Metal complexes and organometallics</b>                   | <b>6 hours</b>          |   |   |   |
| Inorganic complexes - structure, bonding and application; Organometallics – introduction, stability, structure and applications of metal carbonyls, ferrocene and Grignard reagent; Metals in biology (haemoglobin, chlorophyll- structure and property).  |  |                         |   |   |   |
| <b>Module:3</b>  | <b>Organic intermediates and reaction transformations</b>    | <b>6 hours</b>          |   |   |   |
| Organic intermediates - stability and structure of carbocations, carbanions and radicals; Aromatics (aromaticity) and heterocycles (3, 4, 5, 6 membered and fused systems); Organic transformations for making useful drugs for specific disease targets (two examples) and dyes (addition, elimination, substitution and cross coupling reactions).   |  |                         |   |   |   |
| <b>Module:4</b>  | <b>Energy devices</b>  | <b>6 hours</b>          |   |   |   |
| Electrochemical and electrolytic cells – electrode materials with examples (semi-conductors), electrode-electrolyte interface- chemistry of Li ion secondary batteries, supercapacitors; Fuel cells: H <sub>2</sub> -O <sub>2</sub> and solid oxide fuel cell (SOFC); Solar cells - photovoltaic cell (silicon based), photoelectrochemical cells and dye-sensitized cells.  |  |                         |   |   |   |
| <b>Module:5</b>  | <b>Functional materials</b>                                  | <b>7 hours</b>          |   |   |   |
| Oxides of AB, AB <sub>2</sub> , ABO <sub>3</sub> type (specific examples); Composites - types and properties; Polymers - thermosetting and thermoplastic polymers – synthesis and application (TEFLON, BAKELITE); Conducting polymers- polyacetylene and effect of doping – chemistry of display devices specific to OLEDs; Nano materials – introduction, bulk vs nano (quantum dots), top-down and bottom-up approaches for synthesis, and properties of nano Au.  |  |                         |   |   |   |
| <b>Module:6</b>  | <b>Spectroscopic, diffraction and microscopic techniques</b> | <b>5 hours</b>          |   |   |   |
| Fundamental concepts in spectroscopic and instrumental techniques; Principle and applications of UV-Visible and XRD techniques (numericals); Overview of various techniques such as AAS, IR, NMR, SEM and TEM.   |  |                         |   |   |   |
| <b>Module:7</b>  | <b>Industrial applications</b>                               | <b>7 hours</b>          |   |   |   |

|   |   |            |                 |
|---|---|------------|-----------------|
| Water purification methods - zeolites, ion-exchange resins and reverse osmosis; Fuels and combustion -LCV, HCV, Bomb calorimeter (numericals), anti-knocking agents); Protective coatings for corrosion control: cathodic and anodic protection - PVD technique; Chemical sensors for environmental monitoring - gas sensors; Overview of computational methodologies: energy minimization and conformational analysis. |   |            |                 |
| <b>Module:8</b>   | <b>Contemporary topics</b>  |            | <b>2 hours</b>  |
| Guest lectures from Industry and, Research and Development Organizations  |   |            |                 |
|   | <b>Total Lecture hours:</b>   |            | <b>45 hours</b> |
| <b>Textbook</b>   |   |            |                 |

| <b>Pre-requisite</b>  | NIL  |  |  | <b>Syllabus version</b> |      |                 |   |
|   |  |  |  | 1.0                     |      |                 |   |
| <b>Course Objective</b>   |  |  |  |                         |      |                 |   |
| To apply theoretical knowledge gained in the theory course and get hands-on experience of the topics.                       |  |  |  |                         |      |                 |   |
| <b>Course Outcome :</b>   |  |  |  |                         |      |                 |   |
| At the end of the course the student will be able to  |  |  |  |                         |      |                 |   |
| 1. Understand the importance and hands-on experience on analysis of metal ions by means of experiments.                     |  |  |  |                         |      |                 |   |
| 2. Get practical experience on synthesis and characterization of the organic molecules and nanomaterials in the laboratory. |  |  |  |                         |      |                 |   |
| 3. Apply their knowledge in thermodynamic functions, kinetics and molecular geometries through the experiments.             |  |  |  |                         |      |                 |   |
| <b>Indicative Experiments</b>   |  |  |  |                         |      |                 |   |
| 1.  | Thermodynamics functions from EMF measurements : Zinc – Copper system  |  |  |                         |      |                 |   |
| 2.  | Determination of reaction rate, order and molecularity of ethylacetate hydrolysis                                  |  |  |                         |      |                 |   |
| 3.  | Colorimetric estimation of Ni <sup>2+</sup> using conventional and smart phone digital-imaging methods             |  |  |                         |      |                 |   |
| 4.  | Laboratory scale preparation of important drug intermediate - para aminophenol for the synthesis for acetaminophen |  |  |                         |      |                 |   |
| 5.  | Magnesium-sea water activated cell – Effect of salt concentration on voltage generation                            |  |  |                         |      |                 |   |
| 6.  | Analysis of iron in an alloy sample by potentiometry   |  |  |                         |      |                 |   |
| 7.  | Preparation of tin oxide by sol- gel method and its characterization   |  |  |                         |      |                 |   |
| 8.  | Size dependent colour variation of Cu <sub>2</sub> O nanoparticles by spectrophotometer                            |  |  |                         |      |                 |   |
| 9.  | Determination of hardness of water sample by complexometric titration before and after ion-exchange process        |  |  |                         |      |                 |   |
| 10.   | Computational Optimization of molecular geometry using Avogadro software   |  |  |                         |      |                 |   |
| <b>Total Laboratory Hours</b>   |  |  |  |                         |      | <b>30 hours</b> |   |
| Mode of assessment: Mode of assessment: Continuous assessment / FAT / Oral examination and others                           |  |  |  |                         |      |                 |   |
| Recommended by Board of Studies   |  |  |  | 28.06.2021              |      |                 |   |

|   |  | 1.0                     |   |   |                 |
| <b>Course Objectives</b>  |  |                         |   |   |                 |
| 1. To introduce the students to the basic concepts of electronic components, sources, measurements. and instrumentation.<br>2. To apply the inculcated knowledge for developing simple circuits using various electronic components and devices<br>3. To familiarize the students with the basic concepts of number systems and digital logic.<br>4. To analyse the concepts associated with multiple sensors and their sensing mechanisms.                     |  |                         |   |   |                 |
| <b>Course Outcome</b>   |  |                         |   |   |                 |
| Students will be able to<br>1. Understand the basic electronic components, sources, and measuring equipment<br>2. Comprehend the characteristics of diodes, transistors and their applications<br>3. Design and analyse the amplifiers and oscillators<br>4. Design and implement simple digital circuits<br>5. Analyse the performance metrics of the measurement systems.<br>6. Comprehend the basic concept of various sensors and their sensing mechanisms. |  |                         |   |   |                 |
| <b>Module:1</b>   | <b>Electronic Components, Sources, and Measuring Equipment</b> | <b>3 hours</b>          |   |   |                 |
| Evolution of Electronics – Impact of Electronics in Industry and Society – Familiarization of Resistors, Capacitors, Inductors – Colour Coding – types and specifications, – Electro-mechanical components – Relay and Contactors – Regulated Power supply, Function Generator – Multimeter – CRO   |  |                         |   |   |                 |
| <b>Module:2</b>   | <b>Junction Diodes</b>   | <b>4 hours</b>          |   |   |                 |
| Intrinsic and extrinsic semiconductors – doping - PN Junctions, Formation of Junction, Physical operation of diode, Barrier Potential, I - V Characteristics, Rectifiers, Zener diode – I-V Characteristics, Zener diode as Voltage regulator.  |  |                         |   |   |                 |
| <b>Module:3</b>   | <b>Transistors</b>   | <b>5 hours</b>          |   |   |                 |
| Bipolar Junction Transistor (BJT) - Device structure and physical operation, Concept of CB, CE and CC Configuration, Transistor as a Switch, - Metal-Oxide Field Effect Transistor (MOSFET) - Device Structure, mode of operation and Characteristics, MOSFET configurations (CS, CD, CG).  |  |                         |   |   |                 |
| <b>Module:4</b>   | <b>Amplifiers and Oscillators</b>                              | <b>4 hours</b>          |   |   |                 |
| BJT as an amplifier (CE configuration), MOSFET as an amplifier (CS configuration), Feedback concept, Oscillators - Barkhausen's criteria for sustained oscillation, RC Phase Shift Oscillator, LC Oscillator.   |  |                         |   |   |                 |
| <b>Module:5</b>   | <b>Digital Logics</b>  | <b>4 hours</b>          |   |   |                 |
| Number systems, conversion of bases, Boolean algebra, Logic Gates, Concept of universal gate, Simplification and implementation of Boolean functions.   |  |                         |   |   |                 |
| <b>Module:6</b>   | <b>Principles of Measurement and Analysis</b>                  | <b>3 hours</b>          |   |   |                 |
| Units and standards, Errors, Functional Elements of a Measurement System and Instruments, Applications and Classification of Instruments, Types of measured Quantities, Measures of Dispersion, Sample deviation and sample mean, Calibration and standard.   |  |                         |   |   |                 |
| <b>Module:7</b>   | <b>Sensors and Transducers</b>                                 | <b>5 hours</b>          |   |   |                 |
| Sensor fundamentals and characteristics - General concepts and terminology of measurement systems, Sensors and transducers - Classification of sensors, Static and dynamic characteristics. Principle of Resistive Sensors, Capacitive Sensors, Inductive Sensors, Magnetic sensors, Optical sensor, Self-generating Sensors  |  |                         |   |   |                 |
| <b>Module:8</b>   | <b>Contemporary issues</b>                                     | <b>2 hours</b>          |   |   |                 |
| Guest lectures from Industry and, Research and Development Organisations  |  |                         |   |   |                 |
| <b>Total Lecture hours:</b>   |  |                         |   |   | <b>30 hours</b> |

| <b>Pre-requisite</b>   | Technical English Communication  |  |  | <b>Syllabus version</b> |      |                 |   |
|  |  |  |  | 1.0                     |      |                 |   |
| <b>Course Objectives:</b>  |  |  |  |                         |      |                 |   |
| 1. To augment specific writing skills for preparing technical reports  |  |  |  |                         |      |                 |   |
| 2. To think critically, evaluate, analyse general and complex technical information                            |  |  |  |                         |      |                 |   |
| 3. To acquire proficiency in writing and presenting reports  |  |  |  |                         |      |                 |   |
| <b>Course Outcomes:</b>  |  |  |  |                         |      |                 |   |
| 1. Write error free sentences using appropriate grammar, vocabulary and style                                  |  |  |  |                         |      |                 |   |
| 2. Synthesize information and concepts in preparing reports  |  |  |  |                         |      |                 |   |
| 3. Demonstrate the ability to write and present reports on diverse topics                                      |  |  |  |                         |      |                 |   |
| <b>Indicative Experiments</b>  |  |  |  |                         |      |                 |   |
| 1.   | <b>Advanced Grammar, Vocabulary and Editing</b><br>Usage of Tenses - Adjectives and Adverbs - Jargon vs Technical Vocabulary – Abbreviations - Mechanics of Editing: Punctuation and Proof Reading<br><b>Activity:</b> Worksheets                    |  |  |                         |      |                 |   |
| 2.   | <b>Research and Analyses</b><br>Synchronise Technical Details from Newspapers - Magazines - Articles and e-content<br><b>Activity:</b> Writing introduction and literature review  |  |  |                         |      |                 |   |
| 3.   | <b>Systematisation of Information</b><br>Techniques to Converge Objective-Oriented data in Diverse Technical Reports<br><b>Activity:</b> Preparing Questionnaire   |  |  |                         |      |                 |   |
| 4.   | <b>Data Visualisation</b><br>Interpreting Data - Graphs - Tables – Charts - Imagery - Infographics<br><b>Activity:</b> Transcoding   |  |  |                         |      |                 |   |
| 5.   | <b>Introduction to Reports</b><br>Meaning - Definition - Purpose - Characteristics and Types of Reports<br><b>Activity:</b> Worksheets on Types of reports   |  |  |                         |      |                 |   |
| 6.   | <b>Structure of Reports</b><br>Title – Preface – Acknowledgement - Abstract/Summary – Introduction - Materials and Methods – Results – Discussion - Conclusion - Suggestions/Recommendations<br><b>Activity:</b> Identifying the structure of report |  |  |                         |      |                 |   |
| 7.   | <b>Report Writing</b><br>Data Collection - Draft an Outline and Organize Information<br><b>Activity:</b> Drafting reports  |  |  |                         |      |                 |   |
| 8.   | <b>Supplementary Texts</b><br>Appendix – Index – Glossary – References – Bibliography - Notes<br><b>Activity:</b> Organizing supplementary texts   |  |  |                         |      |                 |   |
| 9.   | <b>Review of Final Reports</b><br>Structure – Content – Style - Layout and Referencing<br><b>Activity:</b> Examining clarity and coherence in final reports  |  |  |                         |      |                 |   |
| 10.  | <b>Presentation</b><br>Presenting Technical Reports<br><b>Activity:</b> Planning, creating and digital presentation of reports   |  |  |                         |      |                 |   |
| <b>Total Laboratory Hours</b>  |  |  |  |                         |      | <b>30 hours</b> |   |
| <b>Mode of assessment:</b> Continuous Assessment / FAT / Assignments / Quiz / Presentations / Oral examination |  |  |  |                         |      |                 |   |

| <b>Pre-requisite</b>   | Nil   | <b>Syllabus version</b>                      |  |   |   |                             |   |
|  |   | 1.0  |  |   |   |                             |   |
| <b>Course Objectives</b>   |   |  |  |   |   |                             |   |
| <p>1. To provide the requisite and relevant background necessary to understand the other important engineering mathematics courses offered for Engineers and Scientists.</p> <p>2. To introduce important topics of applied mathematics, namely Single and Multivariable Calculus and Vector Calculus etc.</p> <p>3. Enhance to use technology to model the physical situations into mathematical problems, experiment, interpret results, and verify conclusions.</p>   |   |  |  |   |   |                             |   |
| <b>Course Outcomes</b>   |   |  |  |   |   |                             |   |
| <p>At the end of the course the student should be able to:</p> <p>1. Apply single variable differentiation and integration to solve applied problems in engineering and find the maxima and minima of functions</p> <p>2. Evaluate partial derivatives, limits, total differentials, Jacobians, Taylor series and optimization problems involving several variables with or without constraints</p> <p>3. Evaluate multiple integrals in Cartesian, Polar, Cylindrical and Spherical coordinates.</p> <p>4. Use special functions to evaluate various types of integrals.</p> <p>5. Understand gradient, directional derivatives, divergence, curl, Green's, Stokes and Gauss Divergence theorems.</p> |   |  |  |   |   |                             |   |
| <b>Module:1</b>  |   | <b>Single Variable Calculus</b>              |  |   |   | <b>8 hours</b>              |   |
| Differentiation- Extrema on an Interval Rolle's Theorem and the Mean value theorem-Increasing and decreasing functions.-First derivative test-Second derivative test-Maxima and Minima-Concavity. Integration-Average function value - Area between curves - Volumes of solids of revolution.  |   |  |  |   |   |                             |   |
| <b>Module:2</b>  |   | <b>Multivariable Calculus</b>                |  |   |   | <b>5 hours</b>              |   |
| Functions of two variables-limits and continuity-partial derivatives –total differential-Jacobian and its properties.  |   |  |  |   |   |                             |   |
| <b>Module:3</b>  |   | <b>Application of Multivariable Calculus</b> |  |   |   | <b>5 hours</b>              |   |
| Taylor's expansion for two variables–maxima and minima–constrained maxima and minima-Lagrange's multiplier method.   |   |  |  |   |   |                             |   |
| <b>Module:4</b>  |   | <b>Multiple integrals</b>                    |  |   |   | <b>8 hours</b>              |   |
| Evaluation of double integrals–change of order of integration–change of variables between Cartesian and polar co-ordinates - evaluation of triple integrals-change of variables between Cartesian and cylindrical and spherical co-ordinates.  |   |  |  |   |   |                             |   |
| <b>Module:5</b>  |   | <b>Special Functions</b>                     |  |   |   | <b>6 hours</b>              |   |
| Beta and Gamma functions–interrelation between beta and gamma functions-evaluation of multiple integrals using gamma and beta functions. Dirichlet's integral -Error functions complementary error functions.  |   |  |  |   |   |                             |   |
| <b>Module:6</b>  |   | <b>Vector Differentiation</b>                |  |   |   | <b>5 hours</b>              |   |
| Scalar and vector valued functions – gradient, tangent plane–directional derivative-divergence and curl–scalar and vector potentials. Statement of vector identities-simple problems.  |   |  |  |   |   |                             |   |
| <b>Module:7</b>  |   | <b>Vector Integration</b>                    |  |   |   | <b>6 hours</b>              |   |
| Line, surface and volume integrals - Statement of Green's, Stoke's and Gauss divergence theorems -verification and evaluation of vector integrals using them.  |   |  |  |   |   |                             |   |
| <b>Module:8</b>  |   | <b>Contemporary Topics</b>                   |  |   |   | <b>2 hours</b>              |   |
| Guest lectures from Industry and, Research and Development Organizations   |   |  |  |   |   |                             |   |
|  |   |  |  |   |   | <b>Total Lecture hours:</b> |   |
|  |   |  |  |   |   | <b>45 hours</b>             |   |

| Course Objectives  |  |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. To present comprehensive, compact, and integrated treatment of one of the most important branches of applied mathematics namely Complex variables to the engineers and the scientists.</li> <li>2. To present comprehensive, compact, and integrated treatment of another most important branches of applied mathematics namely Linear Algebra to the engineers and the scientists.</li> <li>3. To provide students with a framework of the concepts that will help them to analyse deeply about many complex problems.</li> </ol> |  |                  |   |   |   |
| Course Outcomes  |  |                  |   |   |   |
| At the end of the course the student should be able to   |  |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. Construct analytic functions and find complex potential of fluid flow and electric fields.</li> <li>2. Find the image of straight lines by elementary transformations and to express analytic functions in power series.</li> <li>3. Evaluate real integrals using techniques of contour integration.</li> <li>4. Use the power of inner product and norm for analysis.</li> <li>5. Use matrices and transformations for solving engineering problems.</li> </ol>  |  |                  |   |   |   |
| Module:1   | Analytic Functions                     | 7 hours          |   |   |   |
| Complex variable - Analytic functions and Cauchy – Riemann equations; Laplace equation and Harmonic functions; Construction of Harmonic conjugate and analytic functions; Applications of analytic functions to fluid-flow and electric field problems.  |  |                  |   |   |   |
| Module:2   | Conformal and Bilinear transformations | 7 hours          |   |   |   |
| Conformal mapping - Elementary transformations; Translation, Magnification, Rotation, Inversion; Exponential and Square transformations ( $w = e^z, z^2$ ); Bilinear transformation; Cross-ratio-Images of the regions bounded by straight lines under the above transformations;  |  |                  |   |   |   |
| Module:3   | Complex Integration                    | 7 hours          |   |   |   |
| Functions given by Power Series - Taylor and Laurent series-Singularities - Poles – Residues; Integration of a complex function along a contour; Statements of Cauchy-Goursat theorem- Cauchy's integral formula-Cauchy's residue theorem-Evaluation of real integrals-Indented contour integral.  |  |                  |   |   |   |
| Module:4   | Vector Spaces                          | 6 hours          |   |   |   |
| Vector space – subspace; linear combination - span - linearly dependent – Independent – bases; Dimensions; Finite dimensional vector space. Row and column spaces; Rank and nullity.   |  |                  |   |   |   |
| Module:5   | Linear Transformations                 | 6 hours          |   |   |   |
| Linear transformations – Basic properties; Invertible linear transformation; Matrices of linear transformations; Vector space of linear transformations; Change of bases; Similarity.  |  |                  |   |   |   |
| Module:6   | Inner Product Spaces                   | 5 hours          |   |   |   |
| Dot products and inner products; Lengths and angles of vectors; Matrix representations of inner products; Gram - Schmidt – Orthogonalization.  |  |                  |   |   |   |
| Module:7   | Matrices and System of Equations       | 5 hours          |   |   |   |
| Eigenvalues and Eigen vectors; Properties of Eigenvalues and Eigen vectors; Cayley-Hamilton theorem; System of linear equations; Gaussian elimination and Gauss Jordan methods.  |  |                  |   |   |   |
| Module:8   | Contemporary issues:                   | 2 hours          |   |   |   |

|   |                               |                 |

| <b>Course Outcome</b>   |  |                  |   |   |                 |
| At the end of the course the student will be able to  |  |                  |   |   |                 |
| <ol style="list-style-type: none"> <li>Comprehend the phenomenon of waves and electromagnetic waves.</li> <li>Understand the principles of quantum mechanics.</li> <li>Apply quantum mechanical ideas to subatomic domain.</li> <li>Appreciate the fundamental principles of a laser and its types.</li> <li>Design a typical optical fiber communication system using optoelectronic devices.</li> </ol> |  |                  |   |   |                 |
| <b>Module:1</b>   | <b>Introduction to waves</b>                     | <b>7 hours</b>   |   |   |                 |
| Waves on a string - Wave equation on a string (derivation) - Harmonic waves- reflection and transmission of waves at a boundary (Qualitative) - Standing waves and their eigenfrequencies.  |  |                  |   |   |                 |
| <b>Module:2</b>   | <b>Electromagnetic waves</b>                     | <b>7 hours</b>   |   |   |                 |
| Physics of divergence - gradient and curl - Qualitative understanding of surface and volume integral - Maxwell Equations (Qualitative) - Displacement current - Electromagnetic wave equation in free space - Plane electromagnetic waves in free space - Hertz's experiment.   |  |                  |   |   |                 |
| <b>Module:3</b>   | <b>Elements of quantum mechanics</b>             | <b>6 hours</b>   |   |   |                 |
| Need for Quantum Mechanics: Idea of Quantization (Planck and Einstein) - Compton effect (Qualitative) – de Broglie hypothesis - - Davisson-Germer experiment - Wave function and probability interpretation - Heisenberg uncertainty principle - Schrödinger wave equation (time dependent and time independent).   |  |                  |   |   |                 |
| <b>Module:4</b>   | <b>Applications of quantum mechanics</b>         | <b>5 hours</b>   |   |   |                 |
| Eigenvalues and eigenfunction of particle confined in one dimensional box - Basics of nanophysics - Quantum confinement and nanostructures - Tunnel effect (qualitative) and scanning tunneling microscope.   |  |                  |   |   |                 |
| <b>Module:5</b>   | <b>Lasers</b>                                    | <b>6 hours</b>   |   |   |                 |
| Laser characteristics - spatial and temporal coherence - Einstein coefficients and their significance - Population inversion - two, three and four level systems - Pumping schemes - threshold gain coefficient - Components of a laser - He-Ne, Nd:YAG and CO2 lasers and their engineering applications.  |  |                  |   |   |                 |
| <b>Module:6</b>   | <b>Propagation of EM waves in optical fibers</b> | <b>6 hours</b>   |   |   |                 |
| Introduction to optical fiber communication system - light propagation through fibers - Acceptance angle - Numerical aperture - V-parameter - Types of fibers – Attenuation - Dispersion-intermodal and intramodal. Application of fiber in medicine - Endoscopy.   |  |                  |   |   |                 |
| <b>Module:7</b>   | <b>Optoelectronic devices</b>                    | <b>6 hours</b>   |   |   |                 |
| Introduction to semiconductors - direct and indirect bandgap – Sources: LED and laser diode, Photodetectors: PN and PIN.  |  |                  |   |   |                 |
| <b>Module:8</b>   | <b>Contemporary issues</b>                       | <b>2 hours</b>   |   |   |                 |
|   |  |                  |   |   |                 |
| <b>Total Lecture hours:</b>   |  |                  |   |   | <b>45 hours</b> |

| To apply theoretical knowledge gained in the theory course and get hands-on experience of the topics.   |  |  |  |                         |          |                        |                 |
| <b>Course Outcome</b>   |  |  |  |                         |          |                        |                 |
| At the end of the course the student will be able to  |  |  |  |                         |          |                        |                 |
| <ol style="list-style-type: none"> <li>1. Comprehend the dual nature of radiation and matter by means of experiments.</li> <li>2. Get hands-on experience on the topics of quantum mechanical ideas in the laboratory.</li> <li>3. Apply low power lasers in optics and optical fiber related experiments.</li> </ol> |  |  |  |                         |          |                        |                 |
| <b>Indicative Experiments</b>   |  |  |  |                         |          |                        |                 |
| 1.  | To determine the dependence of fundamental frequency with the length and tension of a stretched string using sonometer.  |  |  |                         |          |                        |                 |
| 2.  | To determine the characteristics of EM waves using Hertz experiment  |  |  |                         |          |                        |                 |
| 3.  | To determine the wavelength of laser source (He-Ne laser and diode lasers of different wavelengths) using diffraction grating  |  |  |                         |          |                        |                 |
| 4.  | To demonstrate the wave nature of electron by diffraction through graphite sheet   |  |  |                         |          |                        |                 |
| 5.  | To determine the Planck's constant using electroluminescence process   |  |  |                         |          |                        |                 |
| 6.  | To numerically demonstrate the discrete energy levels and the wavefunctions using Schrödinger equation (e.g., particle in a box problem can be given as an assignment) |  |  |                         |          |                        |                 |
| 7.  | To determine the refractive index of a prism using spectrometer (angle of prism will be given)   |  |  |                         |          |                        |                 |
| 8.  | To determine the efficiency of a solar cell  |  |  |                         |          |                        |                 |
| 9.  | To determine the acceptance angle and numerical aperture of an optical fiber   |  |  |                         |          |                        |                 |
| 10.   | To demonstrate the phase velocity and group velocity (simulation)  |  |  |                         |          |                        |                 |
|   |  |  |  |                         |          | Total Laboratory Hours | <b>30 hours</b> |

| <ol style="list-style-type: none"> <li>1. To introduce the fundamental concepts and importance of big data analytics, emphasizing its relevance in various domains.</li> <li>2. To equip students with the necessary skills and tools to effectively manage and analyze large-scale data sets, including hands-on experience on relevant technologies.</li> <li>3. To illustrate the practical application of big data analytics methods and techniques in solving strategic business problems, showcasing real-world examples and case studies.</li> </ol>  |                    |                                      |   |   |                |
| <b>Course Outcomes</b>   |                    |                                      |   |   |                |
| <ol style="list-style-type: none"> <li>1. Recall the characteristics of digital data, data sources, data storage and the applications of big data in different fields.</li> <li>2. Utilize Hadoop ecosystem tools and Hadoop YARN functions for parallel processing of application tasks.</li> <li>3. Comprehend the Map Reduce programming model and the Map Reduce Daemon framework.</li> <li>4. Apply NoSQL databases for data store management to solve big data problems</li> <li>5. Analyze and evaluate the use of spark stack components with RDDs, ETL built-in functions for handling big data.</li> </ol> |                    |                                      |   |   |                |
| <b>Module:1</b>  |                    | <b>Overview of BigData Analytics</b> |   |   | <b>5 hours</b> |
| Introduction - Need of BigData – BigData : Definitions - Characteristics – Evolution - Challenges - Scalability and Parallel processing - Classification of Analytics - Data Storage and Analysis – Use cases of BigData Applications  |                    |                                      |   |   |                |
| <b>Module:2</b>  |                    | <b>Hadoop for Big data</b>           |   |   | <b>7 hours</b> |
| Hadoop and Ecosystem core components – Features, Streaming, pipes Interacting with Hadoop Ecosystem, HDFS: The Design of HDFS- HDFS Concepts - Blocks – Name nodes and Data nodes; Processing Data with Hadoop - Basic File system Operations, Hadoop File systems - Interfaces – I/O - Managing Resources and Applications with Hadoop YARN - Hadoop ecosystem - Hive : Data Types – HQL - Pig : Grunt Shell - Pig Latin data Model & Data Scripts  |                    |                                      |   |   |                |
| <b>Module:3</b>  |                    | <b>Map Reduce</b>                    |   |   | <b>6 hours</b> |
| MapReduce Framework - Programming Model – Map Reduce: Map Tasks - Key value pair - Reduce Tasks - Grouping by key – Partitioning – Combiners – Reduce Tasks - MapReduce Execution - Composing Map Reduce for Calculations and Algorithms   |                    |                                      |   |   |                |
| <b>Module:4</b>  |                    | <b>NoSQL Big Data Management</b>     |   |   | <b>5 hours</b> |
| NoSQL Data Store – Data Architecture Patterns – Mongo DB : Data Types - Query Languages - Database commands – Cassandra : CQL Data Types – CRUD – Import and Export - HBase  |                    |                                      |   |   |                |
| <b>Module:5</b>  |                    | <b>Spark for Big Data Analytics</b>  |   |   | <b>6 hours</b> |

|  |   |                             |                 |
|--|---|-----------------------------|-----------------|
| Introduction to Data Analysis with Spark – Functional Programming Basics - Parallel Programming using Resilient Distributed Datasets - Spark SQL – Data Analysis Operations – Spark RDD - Characteristics - Transform and Action Commands - Data Frame Operations – Spark for ETL – Analytics Reporting and Data Visualization |   |                             |                 |
| <b>Module:6</b>  | <b>Data Stream and Real-Time Analytics</b>  | <b>7 hours</b>              |                 |
| Data Stream – Concepts & Data Stream Management - Stream Computing Aspects : Sampling , Filtering & Counting Distinct Elements in Streams – Estimating Moments - Frequent Item sets – Handling Larger Datasets for Finding Frequent Item sets – Limited Passes Algorithms  |   |                             |                 |
| <b>Module:7</b>  | <b>Graph and Social Network Analytics</b>   | <b>7 hours</b>              |                 |
| Graph Model - Representing Graph as Triples – RDF for Graph Databases - SPARQL – Network Organization and Graph Analytics – Social Network Graph Analysis – Topological – Centralities – K-Core – Clustering - Ranking - Counting and Graph matches  |   |                             |                 |
| <b>Module:8</b>  | <b>Recent Trends</b>  | <b>2 hours</b>              |                 |
| Guest lectures from Industry and, Research and Development Organizations   |   |                             |                 |
|  |   | <b>Total Lecture hours:</b> | <b>45 hours</b> |

| <b>Course Objectives</b>  |   |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. To provide the basic knowledge on image processing concepts.</li> <li>2. To develop the ability to apprehend and implement various image processing algorithms.</li> <li>3. To facilitate the students to comprehend the contextual need pertaining to various image processing applications.</li> </ol>  |   |                  |   |   |   |
| <b>Course Outcomes</b>  |   |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. Ascertain and describe the basics of image processing concepts through mathematical interpretation.</li> <li>2. Acquire the knowledge of various image transforms and image enhancement techniques involved.</li> <li>3. Demonstrate image restoration process and its respective filters required and attain the knowledge of color image processing techniques.</li> <li>4. Experiment the various image segmentation and morphological operations for a meaningful partition of objects.</li> <li>5. Design the various basic feature extraction procedures and illustrate the various image compression techniques and their applications.</li> </ol> |   |                  |   |   |   |
| <b>Module:1</b>   | <b>Digital Image Fundamentals</b>                             | <b>6 hours</b>   |   |   |   |
| Introduction: Digital Image, Applications, Fundamental steps of Digital Image Processing, Components of an Image Processing System, Elements of Visual Perception, Image Sensing and Acquisition, Image Sampling and Quantization, Relationship between pixels, Mathematical Tools used in Digital Image Processing.  |   |                  |   |   |   |
| <b>Module:2</b>   | <b>Intensity Transformations and Spatial Filtering</b>        | <b>6 hours</b>   |   |   |   |
| Intensity Transformation Functions, Spatial Enhancement Techniques - Histogram Processing, Fundamentals of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters, Combining Spatial Enhancement Methods.   |   |                  |   |   |   |
| <b>Module:3</b>   | <b>Image Transforms and Filtering in the Frequency Domain</b> | <b>6 hours</b>   |   |   |   |
| Discrete Fourier Transform, Discrete Cosine Transform, Smoothing in the Frequency Domain, Sharpening in the Frequency Domain, Wavelet Transformation - Haar Transform.  |   |                  |   |   |   |
| <b>Module:4</b>   | <b>Image Restoration and Color Image Processing</b>           | <b>6 hours</b>   |   |   |   |
| Model of Image Degradation/Restoration, Noise models, Restoration in the presence of noise only spatial filtering, Inverse filtering, Weiner filtering, Color Fundamentals, Color Models, Color Image Smoothing and Sharpening.   |   |                  |   |   |   |
| <b>Module:5</b>   | <b>Image Segmentation and Morphological Image Processing</b>  | <b>7 hours</b>   |   |   |   |
| Point, Line and Edge Detection, Edge Based Segmentation - Thres holding based segmentation, Region growing and Region splitting and merging, Segmentation using morphological water sheds, Erosion, Dilation, Opening, Closing, Hit or Miss Transform, Thinning, Thickening, Skeletonization.   |   |                  |   |   |   |
| <b>Module:6</b>   | <b>Feature Extraction</b>                                     | <b>6 hours</b>   |   |   |   |

|   |  |                |                 |
|---|--|----------------|-----------------|
| Boundary Preprocessing, Boundary feature descriptors, Histogram based features, Homogenous region extraction and representation, Texture descriptors, GLCM, LBP, SIFT, SURF.  |  |                |                 |
| <b>Module:7</b>   | <b>Image Compression and Watermarking</b>  | <b>6 hours</b> |                 |
| Lossless compression versus lossy compression, Huffman coding, Arithmetic coding, Block Truncation coding, JPEG, Digital Image Watermarking – visible and invisible watermarking – digital watermarking based on DWT. |  |                |                 |
| <b>Module:8</b>   | <b>Recent Trends</b>   | <b>2 hours</b> |                 |
| Guest lectures from Industry and, Research and Development Organizations  |  |                |                 |

|  |  | 1.0              |   |   |   |
| <b>Course Objectives</b>   |  |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. To provide a practical approach to learning web technologies and programming.</li> <li>2. To enable full-stack web development by learning every aspect of building a database driven web application.</li> <li>3. To demonstrate how the client-server model of Internet programming works</li> </ol>   |  |                  |   |   |   |
| <b>Course Outcomes</b>   |  |                  |   |   |   |
| <p>After successfully completing the course the student should be able to</p> <ol style="list-style-type: none"> <li>1. Identify the different protocols used in the web and comprehend the architecture of the web.</li> <li>2. Apply frontend technologies such as markup, styling and interactivity to the web pages.</li> <li>3. Build full database-driven web applications using server-side programming.</li> <li>4. Create asynchronous processes thereby creating effective web pages.</li> <li>5. Construct complete websites using the latest web technologies and MVC pattern</li> </ol> |  |                  |   |   |   |
| <b>Module:1</b>  | <b>Introduction To Internet</b>                | <b>3 hours</b>   |   |   |   |
| Internet Overview- Networks – WWW –Web Protocols – Web Organization and Addressing – Internet Service Providers, DNS Servers, Connection Types, Internet Addresses - Web Browsers and Web Servers -Security and Vulnerability-Web System Architecture – URL - Domain Name – Web Content Authoring - Webserver Administration – Search Engines  |  |                  |   |   |   |
| <b>Module:2</b>  | <b>Web Designing</b>                           | <b>8 hours</b>   |   |   |   |
| HTML5 – Text tags; Graphics, Video and Sound Tags; Link and Anchor Tags; Table Tags; Form elements, HTML 5 Input types, semantic tags, CSS3 - Selectors, Box Model, Backgrounds and Borders, Text Effects, Animations, Multiple Column Layouts   |  |                  |   |   |   |
| <b>Module:3</b>  | <b>Client Side Scripting</b>                   | <b>8 hours</b>   |   |   |   |
| JavaScript -Variables and Data Types - Statements – Operators- Literals-Functions- Objects- Arrays- Built-in Objects - Exceptions, Event handling, Validation - DOM - Canvas- JQuery   |  |                  |   |   |   |
| <b>Module:4</b>  | <b>Server Side Scripting</b>                   | <b>6 hours</b>   |   |   |   |
| Structure of PHP – Expressions and Control Flow – Functions and Objects – Arrays – Form Handling – File Handling – Email - Validation and Error Handling – Cookies – Session   |  |                  |   |   |   |
| <b>Module:5</b>  | <b>Database Connectivity</b>                   | <b>6 hours</b>   |   |   |   |
| MySQL – Introduction - database design concepts - the Structured Query, Language (SQL) - communicating with a MySQL backend via the PHP - MySQL API - More MySQL database access – PHP Data Objects - JSON   |  |                  |   |   |   |
| <b>Module:6</b>  | <b>Developing Interactive Web Applications</b> | <b>6 hours</b>   |   |   |   |
| XML Basics – Namespaces – Transforming XML documents - XSL, XSLT, XML Schema- DTD,XSD - AJAX –AJAX calls - XML http – request – response – AJAX  |  |                  |   |   |   |

|   |  |            |                 |
|---|--|------------|-----------------|
| with PHP - Data Formats - AJAX with Database – Processing Server Response - AJAX Security   |  |            |                 |
| <b>Module:7</b>   | <b>Application Development</b>   |            | <b>6 hours</b>  |
| Introduction to Node.js- NPM - Events, Timers, and Callbacks in Node.js – file upload – email – Express framework – request –response –routing - templates- view engines. Introduction to Mongo DB- creating DB, collection – CRUD operations - Accessing MongoDB from Node.js. – Accessing online Mongo DB from Node JS. |  |            |                 |
| <b>Module:8</b>   | <b>Recent Trends</b>   |            | <b>2 hours</b>  |
| Guest lectures from Industry and, Research and Development Organizations  |  |            |                 |
|   |  |            |                 |
| <b>Total Lecture hours:</b>   |  |            | <b>45 hours</b> |
| <b>Text Book(s)</b>   |  |            |                 |

| <ol style="list-style-type: none"> <li>1. To demonstrate the use of Object Oriented Programming and threads concepts in Java.</li> <li>2. To familiarize students with Graphical user interface, networking, distributed application, web development using servlet and JSP.</li> <li>3. To impart the core features of spring and hibernate framework.</li> </ol>  |  |                  |   |   |   |
| <b>Course Outcomes</b>  |  |                  |   |   |   |
| <p>After successfully completing the course the student should be able to</p> <ol style="list-style-type: none"> <li>1. Choose the appropriate OOP technique for solving the given problem and use multithreads when required.</li> <li>2. Design Graphical User Interface using JavaFX.</li> <li>3. Build applications using java networking concepts and Deploy distributed applications using RMI.</li> <li>4. Design, Develop and Deploy dynamic web applications using Servlets with JDBC.</li> <li>5. Design and Develop applications using JSP and Enterprise Java Bean.</li> <li>6. Recognize the capabilities of java framework to facilitate solving industrial applications using Spring and Hibernate framework.</li> </ol> |  |                  |   |   |   |
| <b>Module:1</b>   | <b>Java Fundamentals and Multithreading</b>        | <b>7 hours</b>   |   |   |   |
| Java Fundamentals- Class, Packages and Interface. Multi threading: thread life-cycle, thread creation, thread priorities, thread scheduler, thread pool, thread group, synchronization and Inter thread communication.  |  |                  |   |   |   |
| <b>Module:2</b>   | <b>Java FX</b>                                     | <b>6 hours</b>   |   |   |   |
| JavaFX architecture, life cycle, collections, event, utilities, scene control, FXML and Webview.  |  |                  |   |   |   |
| <b>Module:3</b>   | <b>Java Networking and RMI</b>                     | <b>6 hours</b>   |   |   |   |
| Java Networking – TCP - UDP - InetAddress and Ports - Socket Programming. Java Remote Method Invocation – Invocation concept – Remote Interface – Passing Objects – Client Side and Server side RMI Process.  |  |                  |   |   |   |
| <b>Module:4</b>   | <b>Servlets with Database Connectivity</b>         | <b>5 hours</b>   |   |   |   |
| Java Servlets – MVC Architecture – Container Architecture – Controller Components – Dynamic Forms – Servlet Context - The JDBC API: The API components, database operations like creating tables, CRUD(Create, Read, Update, Delete) operations using SQL – JDBC Drivers.   |  |                  |   |   |   |
| <b>Module:5</b>   | <b>Java Server Pages and Enterprise Java Beans</b> | <b>7 hours</b>   |   |   |   |
| JSP Scripting Elements – Tags - Variables and Objects – Methods – Control Statements – User Sessions – Cookies – Session Objects – JSTL and Servlets with JSP. Enterprise JavaBeans: Deployment Descriptors – Session JavaBean – Entity JavaBean – Message and Driven Bean.   |  |                  |   |   |   |
| <b>Module:6</b>   | <b>Spring Framework</b>                            | <b>6 hours</b>   |   |   |   |
| Introduction to Spring – Bean scope and lifecycle –Bean Definition Inheritance - Dependency injection – Spring MVC: Building spring web Apps – Creating controllers and views. Introduction to docker, deploying spring boot with docker.   |  |                  |   |   |   |

|  |  |                |                 |
|--|--|----------------|-----------------|
|  |  |                |                 |
| <b>Module:7</b>  | <b>Hibernate Framework</b>   | <b>6 hours</b> |                 |
| Introduction to Hibernate – Architecture, Lifecycle, Configuration, Session and Persistent class, Hibernate Query Languages and Criteria queries. Spring Hibernate Integrations. |  |                |                 |
| <b>Module:8</b>  | <b>Recent Trends</b>   | <b>2 hours</b> |                 |
| Guest lectures from Industry and, Research and Development Organizations   |  |                |                 |
|  |  |                |                 |
| <b>Total Lecture hours:</b>  |  |                | <b>45 hours</b> |
| <b>Text Book(s)</b>  |  |                |                 |
| 1.   | Herbert Schildt, "Java: The Complete Reference", 11 <sup>th</sup> Edition, McGraw-Hill Publishers, 2019.   |                |                 |
| 2.   | Santosh Kumar K "JDBC 4.2, Servlet 3.1, and JSP 2.3 Includes JSF 2.2 and Design Patterns, Black Book", 2 <sup>nd</sup> Edition, DT Editorial Services, 2016. |                |                 |

| <b>Course Objectives</b>  |                 |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. To recognize the emergence, requirements and benefits of a NoSQL database.</li> <li>2. To compare NoSQL databases with each other and relational systems.</li> <li>3. To create wide-column, document, key-value, graph and object-oriented databases, add content, and run queries.</li> </ol>   |                 |                  |   |   |   |
| <b>Course Outcomes</b>  |                 |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. Define, compare and use the four types of NoSQL Databases.</li> <li>2. Explain key value databases and apply queries on those databases.</li> <li>3. Explain the detailed architecture, define objects, load data, query data and performance tune Document-oriented NoSQL databases.</li> <li>4. Demonstrate an understanding of the detailed architecture, define objects, load data, query data and performance tune Column-oriented and Graph oriented NoSQL databases.</li> <li>5. Evaluate NoSQL database development tools and programming languages.</li> </ol> |                 |                  |   |   |   |
| <b>Module:1 Introduction</b>  |                 | <b>5 hours</b>   |   |   |   |
| The Relational Database Revolution with SQL - Design Limitations - Impedance Mismatch - Schema Evolution - Horizontal Scalability- Motivations for Not Just/No SQL (NoSQL) Databases - Data Management with Distributed Databases – SQL Versus NoSQL Databases - The CAP Theorem - ACID and BASE - Types of Eventual Consistency - Types of NoSQL Databases   |                 |                  |   |   |   |
| <b>Module:2 Key-Value Databases</b>   |                 | <b>4 hours</b>   |   |   |   |
| From Arrays to Key-Value Databases - Essential Features of Key-Value Databases - Properties of keys - Characteristics of values - Data Modeling Terms for Key- Value Databases - Key - Architecture and Implementation terms - Designing Structured Values - Limitations of Key-Value Databases - Design Patterns for Key-Value Databases - Redis database - Queries - Case Study: Key-Value Databases for Mobile Application Configuration.  |                 |                  |   |   |   |
| <b>Module:3 Document Databases</b>  |                 | <b>6 hours</b>   |   |   |   |
| Introduction to Document Databases – Mongo DB - Collections - Basic operations on collections (CRUD) - Find operation - Sorting - Limiting - Aggregate operations: Aggregation pipeline - Operators - Combining aggregate operators   |                 |                  |   |   |   |
| <b>Module:4 Designing Document Databases</b>  |                 | <b>7 hours</b>   |   |   |   |
| Partitioning - Types of Partitions - Vertical Partitioning - Horizontal Partitioning or Sharding - Separating Data with Shard Keys – Replication - Distributing Data with a Partitioning Algorithm - Data Modelling and Query Processing - Normalization – De-Normalization - Query Processor - Indexing - Distributed Consistency - Joins  |                 |                  |   |   |   |
| <b>Module:5 Column Family Databases</b>   |                 | <b>6 hours</b>   |   |   |   |
| Introduction to Column Family Databases - Google Big Table - Differences and Similarities to Key-Value and Document Databases - Architectures Used in Column Family Databases - Cassandra Architecture: Peer-to-Peer - Commit Log - Bloom Filter - Consistency Level - Processes and Protocols - Replication - Anti-Entropy -   |                 |                  |   |   |   |

|  |  |  |                 |
|--|--|--|-----------------|
| Gossip Protocol - Hinted Handoff - Handling of deletion - When to Use Column Family  |  |  |                 |
| <b>Module:6</b>  |  | <b>Designing Column Family Databases</b> |                 |
|  |  | <b>7 hours</b>                           |                 |
| Column Family Database Terminology – Key space - Row Key - Column - Column Families – Cassandra - CQL Queries - Primary Key and Clustering Key - CRUD operations - Cluster - Partition - Replication - Consistency levels - Guidelines for Designing Tables - Indexing - Primary and Secondary Index   |  |  |                 |
| <b>Module:7</b>  |  | <b>Graph Databases</b>                   |                 |
|  |  | <b>8 hours</b>                           |                 |
| Introduction to Graph Databases - What Is a Graph? - Graphs and Network Modeling - Advantages of Graph Database - Elements of Graphs - Operations on Graphs - Properties of Graphs and Nodes - Types of Graphs - Graph Design - Neo4J - Cypher Query Language: Creating, Removing and Querying Nodes and Relations - Basic Graph Traversal - Finding Path and Distance between nodes - Gremlin: Query by Graph Traversal - Using NoSQL and Relational Databases Together |  |  |                 |
| <b>Module:8</b>  |  | <b>Recent Trends</b>                     |                 |
|  |  | <b>2 hours</b>                           |                 |
| Guest lectures from Industry and, Research and Development Organizations   |  |  |                 |
|  |  | <b>Total Lecture hours:</b>              |                 |
|  |  | <b>45 hours</b>                          |                 |

Evaluate the various cloud services and deployment models in the infrastructure</li> <li>3. Apply the various cloud security concepts for application development</li> <li>4. Design and manage cloud services with cloud simulation and various cloud platforms.</li> <li>5. Design and develop AI and IoT applications in the cloud environment</li> </ol> |  |                  |   |   |   |
| <b>Module:1</b>  | <b>Introduction</b>                    | <b>5 hours</b>   |   |   |   |
| Cloud Computing definition - Evolution of Cloud Computing - Benefits and challenges of cloud computing – Cloud services – Cloud deployment – Cloud architecture –NIST architecture - Business models.  |  |                  |   |   |   |
| <b>Module:2</b>  | <b>Virtualization</b>                  | <b>6 hours</b>   |   |   |   |
| Introduction to Virtual Machine (VM) - basics of Virtualization - Types of Virtualizations - Desktop Virtualization – Application Virtualization - Server Virtualization - Storage Virtualization- OS level Virtualization –Virtualization for cloud computing – Software-defined data Center (SDDC).  |  |                  |   |   |   |
| <b>Module:3</b>  | <b>Public Cloud</b>                    | <b>7 hours</b>   |   |   |   |
| Public cloud benefits – Challenges – public cloud services – AWS – compute – storage –network services –Google cloud service (GCP) – compute – storage – network – Cloud AI services – Multitenant - case study.   |  |                  |   |   |   |
| <b>Module:4</b>  | <b>Private Cloud</b>                   | <b>7 hours</b>   |   |   |   |
| Private cloud benefits – challenges – private cloud services – VM migration – cloud provisioning – managing private cloud - OpenStack architecture – components – OpenStack installation –Google private cloud services - case study.  |  |                  |   |   |   |
| <b>Module:5</b>  | <b>Cloud Management &amp; Security</b> | <b>6 hours</b>   |   |   |   |
| Data center –cloud management – resource management - automation –benefits of automation - Infrastructure security – network security – host level security.   |  |                  |   |   |   |
| <b>Module:6</b>  | <b>Security Principles</b>             | <b>6 hours</b>   |   |   |   |
| Cloud security overview – CIA triads - Threats – risk management - computer security incident response team (CSIRT)–cloud security design principles - cloud security standards: privacy, confidentiality, and integrity –cloud security policy – service level agreement (SLA)  |  |                  |   |   |   |
| <b>Module:7</b>  | <b>Cloud Application development</b>   | <b>6hours</b>    |   |   |   |
| Tools for cloud development – simulators – cloudsim - develop an application and deploy in public cloud services – deploy AI application in the cloud – IoT cloud services – cloud security services.  |  |                  |   |   |   |
| <b>Module:8</b>  | <b>Recent Trends</b>                   | <b>2 hours</b>   |   |   |   |

|  |  |            |                 |
|--|--|------------|-----------------|
| Guest lectures from Industry and, Research and Development Organizations |  |            |                 |
| Total Lecture hours:   |  |            | 45 hours        |
| <b>Text Book(s)</b>  |  |            |                 |
| 1.   | Hemanand D, Chembian W T, VallemRanadheer Reddy, Cloud Computing: Cloud Concepts; Methodology, Network Architecture, 2021. |            |                 |
| <b>Reference Books</b>   |  |            |                 |

| BCSE409L   | Natural Language Processing                   | 3                | 0 | 0 | 3 |
| Pre-requisite  | NIL   | Syllabus version |   |   |   |
|  |   | 1.0              |   |   |   |
| <b>Course Objectives</b>   |   |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. To introduce the fundamental concepts and techniques of Natural language Processing for analyzing words based on Morphology and CORPUS.</li> <li>2. To examine the NLP models and interpret algorithms for classification of NLP sentences by using both the traditional, symbolic and the more recent statistical approach.</li> <li>3. To get acquainted with the algorithmic description of the main language levels that includes morphology, syntax, semantics, and pragmatics for information retrieval and machine translation applications.</li> </ol>         |   |                  |   |   |   |
| <b>Course Outcomes</b>   |   |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. Understand the fundamental concepts of Natural Language Processing.</li> <li>2. Develop useful systems for language processing and related tasks involving text processing and demonstrate text-based processing of natural language with respect to morphology.</li> <li>3. Check the syntactic and semantic correctness of natural language.</li> <li>4. Select a suitable language modelling &amp; Feature Representation to develop real-world applications.</li> <li>5. Develop computational methods for real-world applications using deep learning.</li> </ol> |   |                  |   |   |   |
| <b>Module:1</b>  | <b>Introduction to NLP</b>                    | <b>4 hours</b>   |   |   |   |
| Introduction to NLP – Ambiguous nature of NLP - Morphological Analysis - Syntax Analysis– Semantic Analysis –Pragmatic Analysis – Discourse Analysis - Introduction to real-life applications of NLP – Introduction to corpora – Corpora Analysis.   |   |                  |   |   |   |
| <b>Module:2</b>  | <b>Morphological Analysis and POS Tagging</b> | <b>7 hours</b>   |   |   |   |
| Sentence Segmentation – Language Specific issues – Text Normalization – Stemming - Inflectional and Derivation Morphology - Morphological Analysis and Generation using finite state transducers - Introduction to POS Tagging, Hidden Markov Models for POS Tagging - Viterbi Decoding for HMM.   |   |                  |   |   |   |
| <b>Module:3</b>  | <b>Syntax Analysis</b>                        | <b>6 hours</b>   |   |   |   |
| Ambiguities in Syntax Analysis - Issues with Context Free Grammar based parsing- Shallow parsing- Conditional Random Fields (CRF), Dependency Grammar- Dependency Parsing, Neural Network Dependency Parser.   |   |                  |   |   |   |
| <b>Module:4</b>  | <b>Semantic Analysis</b>                      | <b>7 hours</b>   |   |   |   |
| Semantics - Lexical Semantics- Word Senses - Relations between Senses - Word Sense Disambiguation (WSD) – Word Similarity Analysis using Thesaurus and Distributional methods – Word2vec – fastText word Embedding - Lesk Algorithm – Thematic Roles, Semantic Role labelling - Pragmatics Analysis - Anaphora Resolution.   |   |                  |   |   |   |
| <b>Module:5</b>  | <b>N Gram Modeling &amp; Word Embeddings</b>  | <b>7 hours</b>   |   |   |   |
| Vector space representation - The role of language models - Simple N-gram models - Estimating parameters - Evaluating language models - Basic smoothing – Laplace Smoothing – BERT.  |   |                  |   |   |   |

|  |  |                            |
|--|--|----------------------------|
| <b>Module:6</b>  | <b>Applications Of NLP-I</b>   | <b>5 hours</b>             |
| Text Categorization: Sentiment Analysis, Named Entity Recognition- Neural Machine Translation (NMT).   |  |                            |
| <b>Module:7</b>  | <b>Applications Of NLP-II</b>  | <b>7 hours</b>             |
| Text Summarization – Abstractive Summarization – Extractive Summarization – Question Answering Systems (QA) - Information Retrieval based QA – Knowledge Based QA -Question answering Systems using GPT model. |  |                            |
| <b>Module:8</b>  | <b>Recent Trends</b>   | <b>2 hours</b>             |
| Guest lectures from Industry and, Research and Development Organizations   |  |                            |

| BCSE410L  | Cyber Security                                | 3                | 0 | 0 | 3 |
| Pre-requisite   | NIL   | Syllabus version |   |   |   |
|   |   | 1.0              |   |   |   |
| <b>Course Objectives</b>  |   |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. To understand the need for cybersecurity for solving the real word problems</li> <li>2. To aware of ethical hacking methodologies for protecting cyber-physical systems.</li> <li>3. To familiarize the defensive mechanisms, countermeasures, and best practices.</li> </ol>   |   |                  |   |   |   |
| <b>Course Outcomes</b>  |   |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. Understand the emerging cybersecurity attacks and their adversarial risk</li> <li>2. Identify the emerging vulnerabilities and attacks, and countermeasures in cyber-physical systems.</li> <li>3. Comprehend the need for ethical hacking to minimize the security risk</li> <li>4. Know the emerging security solutions using automated tools and techniques</li> </ol> |   |                  |   |   |   |
| <b>Module:1</b>   | <b>Foundation for Cyber Security</b>          | <b>4 hours</b>   |   |   |   |
| Hacker - Ethical hacker - Cyber-attacks: Network infrastructure attacks, Operating system attacks, Application and other specialized attacks - Security Assessment Principles   |   |                  |   |   |   |
| <b>Module:2</b>   | <b>Hacking Methodology</b>                    | <b>5 hours</b>   |   |   |   |
| Methodology: Scanning the Systems and Network - Attack tree analysis - Assessing Vulnerabilities - Penetration Testing - Security Testing tools   |   |                  |   |   |   |
| <b>Module:3</b>   | <b>Social Engineering</b>                     | <b>7 hours</b>   |   |   |   |
| Social Engineering Implications - Performing Social Engineering Attacks - Social Engineering Countermeasures: Policies, User awareness and training - Social Engineering Tool kit - Physical Security   |   |                  |   |   |   |
| <b>Module:4</b>   | <b>Password Security</b>                      | <b>7 hours</b>   |   |   |   |
| Password Vulnerabilities - Passwords Cracking Tools - Brute-force attacks - Rainbow attack - Password Cracking Countermeasures - Password Policy - Securing Operating Systems - Keyloggers tools  |   |                  |   |   |   |
| <b>Module:5</b>   | <b>Wireless and Mobile Security</b>           | <b>7 hours</b>   |   |   |   |
| Wireless and mobile Vulnerabilities and Attacks - Encrypted Traffic and countermeasures - Rogue wireless devices and countermeasures - MAC spoofing and countermeasures - Securing wireless workstations, Wi-Fi and Internet of Things  |   |                  |   |   |   |
| <b>Module:6</b>   | <b>Operating System Security</b>              | <b>6 hours</b>   |   |   |   |
| OS Vulnerabilities: Windows, Linux and Mac - Detecting Null Sessions - Exploiting Missing Patches – Metasploit - Burp suite - Countermeasures against Buffer overflow and NFS attacks   |   |                  |   |   |   |
| <b>Module:7</b>   | <b>Web Application and Databases Security</b> | <b>7 hours</b>   |   |   |   |
| Web App Security: Seeking out Web Vulnerabilities - Directory traversal - Input-filtering attacks - Code injection, SQL injection, Cross-site scripting Counter   |   |                  |   |   |   |

|   |   |                |                 |
|---|---|----------------|-----------------|
| measures - Database Security: Database vulnerabilities - Minimizing Database Security Risks and Storage Security Risks – Counter measures and tools |   |                |                 |
| <b>Module:8</b>   | <b>Recent Trends</b>  | <b>2 hours</b> |                 |
| Guest lectures from Industry and, Research and Development Organizations  |   |                |                 |

| <b>Course Objectives</b>   |  |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. To introduce the parts, working aspects and types of robots.</li> <li>2. To make the students familiar with machine operations and automation using robots.</li> <li>3. To discuss the various domain applications and implementation of robot control systems.</li> </ol>   |  |                  |   |   |   |
| <b>Course Outcomes</b>   |  |                  |   |   |   |
| At the end of the course the student will be able to   |  |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. Explain the basic working concepts of robots and to understand the kinematics of robot.</li> <li>2. Analyze the various sensors and drive mechanism in robot for automation.</li> <li>3. Understand the basic control system concepts for robot-controlled engineering.</li> <li>4. Able to classify the actuation system and select appropriate type for their application.</li> <li>5. Able to understand about robots and its applications in automation field</li> </ol> |  |                  |   |   |   |
| <b>Module:1</b>  | <b>Introduction to Robotics</b>                    | <b>5 hours</b>   |   |   |   |
| Introduction to robotics - law of robotics - History of robotics - Types and components of a robot - Classification of robots  |  |                  |   |   |   |
| <b>Module:2</b>  | <b>End effectors</b>                               | <b>5 hours</b>   |   |   |   |
| End Effectors: Types of end effectors - Mechanical Gripper: Gripper force analysis - Vacuum cup - Magnetic gripper - Special types of grippers   |  |                  |   |   |   |
| <b>Module:3</b>  | <b>Robot Kinematics</b>                            | <b>7 hours</b>   |   |   |   |
| Kinematics systems: Definition of mechanisms and manipulators, social issues and safety. Kinematic Modelling: Translation and Rotation Representation, Coordinate transformation, DH parameters.   |  |                  |   |   |   |
| <b>Module:4</b>  | <b>Sensors and Imaging System</b>                  | <b>8 hours</b>   |   |   |   |
| Sensor: Contact and Proximity - Position, Velocity, Force - Tactile. Introduction to image processing- types of image dimensions - acquisition of images – Resolution and quantization of images - Vision system applications in robotics.   |  |                  |   |   |   |
| <b>Module:5</b>  | <b>Control system concepts for robotics</b>        | <b>6 hours</b>   |   |   |   |
| Closed-loop and open-loop control systems for robotics - Basics of control: Transfer functions - Non-linear and advanced controls.   |  |                  |   |   |   |
| <b>Module:6</b>  | <b>Actuation Systems</b>                           | <b>6 hours</b>   |   |   |   |
| Actuators: Electric, Hydraulic and Pneumatic - Transmission: Gears - Timing Belts and Bearings - Parameters for selection of actuators   |  |                  |   |   |   |
| <b>Module:7</b>  | <b>Automation in robotics and its applications</b> | <b>6 hours</b>   |   |   |   |
| Overview of automation: Architecture of automation and integration with sensors – actuators – components - Robot Applications in automation field like Machine loading, Pick and place operations, Inspection  |  |                  |   |   |   |
| <b>Module:8</b>  | <b>Recent Trends</b>                               | <b>2 hours</b>   |   |   |   |
| Guest lectures from Industry and, Research and Development Organizations   |  |                  |   |   |   |
|  | <b>Total Lecture hours:</b>                        | <b>45 hours</b>  |   |   |   |

| <b>Text Book(s)</b>                                    |  |            |                 |

| Students who complete this course successfully are expected to:  |                    |                  |   |                |   |
| <ol style="list-style-type: none"> <li>1. Comprehend the hardware and software organization of parallel computing systems.</li> <li>2. Design and implement Parallel algorithms.</li> <li>3. Experiment with mechanisms such as client/server and P2P algorithms, remote procedure calls (RPC/RMI).</li> <li>4. Analyse the requirements for programming parallel systems and critically evaluate the strengths and weaknesses of parallel programming models.</li> <li>5. Analyse the efficiency of a parallel processing system and evaluate the types of application for which parallel programming is useful.</li> </ol> |                    |                  |   |                |   |
| <b>Module:1 Parallelism Fundamentals</b>   |                    |                  |   |                |   |
|  |                    |                  |   | <b>4 hours</b> |   |
| Motivation – Key Concepts and Challenges – Overview of Parallel computing – Flynn’s Taxonomy – Multi-Core Processors – Shared vs Distributed memory.   |                    |                  |   |                |   |
| <b>Module:2 Parallel Architectures</b>   |                    |                  |   |                |   |
|  |                    |                  |   | <b>7hours</b>  |   |
| Introduction - SIMD – Vector Processing – GPUs, TPUs– Instruction Level Support for Parallel Programming - Introduction to Open MP Programming.  |                    |                  |   |                |   |
| <b>Module:3 Parallel Algorithm Design</b>  |                    |                  |   |                |   |
|  |                    |                  |   | <b>8 hours</b> |   |
| Decomposition Techniques – Characteristics of Tasks and Interactions – Mapping Techniques for Load balancing – Methods for Containing Interaction Over heads - Parallel Algorithm Models – Design concepts: Threading for Functionality, Threading for Performance, Turnaround ,Throughput , Decomposing the work, Task Decomposition, Data Decomposition; Correctness concepts: Race Conditions, Critical Region, Mutual Exclusion, Synchronization, Barrier Synchronization , Deadlock; Performance concepts: Speedup, Efficiency, Granularity, Load Balance;  |                    |                  |   |                |   |
| <b>Module:4 Communication Operations</b>   |                    |                  |   |                |   |
|  |                    |                  |   | <b>7 hours</b> |   |
| One-to-All Broadcast and All-to-One Reduction - All-to-All Broadcast and Reduction - All-Reduce and Prefix-Sum Operations - Scatter and Gather - All-to-All Personalized Communication - Circular Shift - Improving the Speed of Some Communication Operations.  |                    |                  |   |                |   |
| <b>Module:5 Analytical Modeling</b>  |                    |                  |   |                |   |
|  |                    |                  |   | <b>5 hours</b> |   |
| Sources of Overhead in Parallel Programs - Performance Metrics for Parallel Systems - Effect of Granularity and Data Mapping on Performance - Scalability of Parallel Systems - Minimum Execution Time and Minimum Cost-Optimal Execution  |                    |                  |   |                |   |

|   |  |                |                 |
|---|--|----------------|-----------------|
| Time –Analysis of PRAM - Asymptotic Analysis of Parallel Programs - Other Scalability Metrics.  |  |                |                 |
| <b>Module:6</b>   | <b>Parallel Programming</b>  | <b>7 hours</b> |                 |
| Shared Memory Programming - Distributed Memory Programming– Distributed Shared Memory – Message Passing – Programming Using the Message Passing Paradigm – Group Communication – Heterogeneous computing systems – Case Study (RPC and Java RMI). |  |                |                 |
| <b>Module:7</b>   | <b>Parallel Algorithms</b>   | <b>5hours</b>  |                 |
| Matrix Multiplication - Sorting Algorithms - Graph Algorithms – Applications  |  |                |                 |
| <b>Module:8</b>   | <b>Recent Trends</b>   | <b>2 hours</b> |                 |
| Guest lectures from Industry and, Research and Development Organizations  |  |                |                 |
| <b>Total Lecture hours:</b>   |  |                | <b>45 hours</b> |
| <b>Text Book(s)</b>   |  |                |                 |

|  |   | 1.0              |   |   |   |
| <b>Course Objectives</b>   |   |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. To introduce the concepts of neural networks and advanced neural networks.</li> <li>2. To understand the fundamentals of fuzzy sets, fuzzy logic and rough sets.</li> <li>3. To establish basic knowledge about optimization techniques and hybrid models in soft computing.</li> </ol>  |   |                  |   |   |   |
| <b>Course Outcomes</b>   |   |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. Have a general understanding of soft computing methodologies, to deal with imprecise and uncertain data</li> <li>2. Identify and describe soft computing techniques and build supervised learning and unsupervised learning networks.</li> <li>3. Apply fuzzy logic, rough sets and reasoning methods to handle uncertainty and solve various engineering problems.</li> <li>4. Apply optimization methods to solve real world problems.</li> <li>5. Evaluate and compare solutions by various soft computing approaches for a given problem.</li> </ol> |   |                  |   |   |   |
| <b>Module:1</b>  | <b>Introduction to Neural Network</b>   | <b>6 hours</b>   |   |   |   |
| Evolution of Neural Network, Mathematical model of neuron, Terminologies of ANN, Characteristics of neural networks, Learning Methods, Early neural network architectures, Application domains, Introduction to Pattern Recognition  |   |                  |   |   |   |
| <b>Module:2</b>  | <b>Memory Models</b>                    | <b>7 hours</b>   |   |   |   |
| Pattern Association, Auto Associative Memory Networks, Hetero Associative Memory Networks, Bidirectional Associative Memory, Hopfield networks   |   |                  |   |   |   |
| <b>Module:3</b>  | <b>Unsupervised Learning Algorithms</b> | <b>7 hours</b>   |   |   |   |
| Self-Organizing Maps, Kohonen Network, Adaptive Resonance Theory (ART), algorithms and Illustration of ART1 and ART2 model, Related Applications   |   |                  |   |   |   |
| <b>Module:4</b>  | <b>Fuzzy Sets and Fuzzy Relations</b>   | <b>7 hours</b>   |   |   |   |
| Crisp Sets, Fuzzy sets, Membership functions, fuzzy set operations, properties of Fuzzy sets, Crisp Relations, Fuzzy relations, Operations of Fuzzy Relations- Fuzzy Logic, Fuzzy Inference systems, Fuzzy knowledge based systems, Fuzzy Decision making  |   |                  |   |   |   |
| <b>Module:5</b>  | <b>Fuzzy and Neuro Fuzzy Modeling</b>   | <b>6 hours</b>   |   |   |   |
| Fuzzy clustering, Fuzzy C-Means Clustering, Fuzzy Classification Algorithms - Fuzzy Decision Trees – Fuzzy SVM - Neuro Fuzzy Modeling – Adaptive Neuro-Fuzzy Inference Systems – Coactive Neuro-Fuzzy Modeling - Fuzzy Rule based Structure Identification – Neuro-Fuzzy Control.  |   |                  |   |   |   |
| <b>Module:6</b>  | <b>Rough sets</b>                       | <b>5 hours</b>   |   |   |   |
| Fundamentals of Rough sets, Rough Approximations and their properties, Measures of Accuracy, Rough Membership function and properties, Attribute reduction using Rough sets, Knowledge representation systems using Rough sets, Decision tables, Rule induction, Discernibility matrix, Class - Classification using neuro Fuzzy rough sets.   |   |                  |   |   |   |
| <b>Module:7</b>  | <b>Optimization Techniques</b>          | <b>5 hours</b>   |   |   |   |

|   |  |                |                 |
|---|--|----------------|-----------------|
| Introduction, Genetic Algorithms, Memetic Algorithms, Particle Swarm Optimization, Ant Colony Optimization, Grey wolf optimization - Hybrid Models, Neuro genetic algorithms - Applications |  |                |                 |
| <b>Module:8</b>   | <b>Recent Trends</b>   | <b>2 hours</b> |                 |

| <ol style="list-style-type: none"> <li>1. Appraise modern high performance architectures.</li> <li>2. Investigate the inherent potential and limitations of programs/applications.</li> <li>3. Design high performance applications for multi-core processors.</li> <li>4. Develop high performance applications for distributed systems.</li> <li>5. Examine tools and resources for Exa-scale performance</li> </ol> |   |                  |   |   |   |
| <b>Module:1</b>  | <b>Introduction</b>   | <b>5 hours</b>   |   |   |   |
| High-Performance Computing Disciplines, Impact of Supercomputing on Science, Society, and Security, Anatomy of a Supercomputer, Computer Performance, A Brief History of Supercomputing  |   |                  |   |   |   |
| <b>Module:2</b>  | <b>HPC Architecture: Systems and Technologies</b>           | <b>6 hours</b>   |   |   |   |
| Key Properties of HPC Architecture, Parallel Architecture Families—Flynn's Taxonomy, Accelerating Technologies: Symmetric Multi-Processor (SMP), Massively Parallel Processor (MPP), Graphical Processor Units (GPU) and Tensor Processing Unit (TPU)  |   |                  |   |   |   |
| <b>Module:3</b>  | <b>Commodity Clusters and Essential Resource Management</b> | <b>7 hours</b>   |   |   |   |
| Introduction to Commodity Cluster, Beowulf Cluster Project, Hardware Architecture, Programming Interfaces, Software Environment, Basic Methods of Use, Managing Resources, The Essential SLURM, Summary of Commands, The Essential Portable Batch System, Overview of Grid and Cloud Technologies  |   |                  |   |   |   |
| <b>Module:4</b>  | <b>HPC Peripherals and Algorithms</b>                       | <b>6 hours</b>   |   |   |   |
| Amdahl's Law, Memory Hierarchy, PCI Bus, External I/O Interfaces, Fork–Join, Divide and Conquer, Manager–Worker, Embarrassingly Parallel, Halo Exchange, Permutation: Cannon's Algorithm, Task Dataflow  |   |                  |   |   |   |
| <b>Module:5</b>  | <b>Operating Systems and Performance Monitoring</b>         | <b>6 hours</b>   |   |   |   |

|   |   |            |                 |
|---|---|------------|-----------------|
| Operating System Structures and Services, Process Management, Threads, Memory Management, Time Measurement, Performance Profiling, Monitoring Hardware Events, Integrated Performance Monitoring Toolkits, Profiling in Distributed Environments  |   |            |                 |
| <b>Module:6</b>   | <b>Debugging HPC Applications</b>   |            | <b>6 hours</b>  |
| Tools, Debugging OpenMP Example: Accessing an Unprotected Shared Variable, Debugging MPI Example: Deadlock, Compiler Flags for Debugging, System Monitors to Aid Debugging  |   |            |                 |
| <b>Module:7</b>   | <b>Mass Storage and MapReduce</b>   |            | <b>7 hours</b>  |
| Storage Device Technology, Aggregated Storage, Storage Area Networks, Network Attached Storage, Tertiary Storage, Role and Function of File Systems, Network File System, General Parallel File System, Lustre File System, Map and Reduce Distributed Computation, Overview of Hadoop. |   |            |                 |
| <b>Module:8</b>   | <b>Recent Trends</b>  |            | <b>2 hours</b>  |
| Guest lectures from Industry and, Research and Development Organizations  |   |            |                 |

| <b>Course Objectives</b>   |  |                  |   |   |   |
| <ol style="list-style-type: none"> <li>1. To provide a mathematical foundation for Quantum Computing and provide the basics of working</li> <li>2. To interpret the various aspects and applications of quantum computing.</li> <li>3. To examine the factors that affect Quantum computation.</li> </ol>  |  |                  |   |   |   |
| <b>Course Outcomes</b>   |  |                  |   |   |   |
| <p>On completion of the course, the student will be able to</p> <ol style="list-style-type: none"> <li>1. Ability to understand the concept behind quantum physics and the mathematical computations lies in it.</li> <li>2. Explain the postulates and representation of a Qubit.</li> <li>3. Explain the different basis in Quantum phenomena and its measurements.</li> <li>4. Explain the working model of Quantum computing as teleportation and function finding</li> <li>5. Explain the various factors that affect a qubit and handling methods</li> </ol> |  |                  |   |   |   |
| <b>Module:1</b>  | <b>Physical Properties of Quantum Particles and basic Mathematics of Quantum Computing</b> | <b>5 hours</b>   |   |   |   |
| <p><b>Physical properties:</b> Double Slit Experiment; Light: Particle Vs Wave; Heisenberg Uncertainty Principle.</p> <p><b>Linear Algebra:</b> Vector spaces – basis; Inner product; Outer product; Tensor product; Linear operators.</p>   |  |                  |   |   |   |
| <b>Module:2</b>  | <b>Quantum Mechanics for Quantum Computing</b>   | <b>6 hours</b>   |   |   |   |
| Review of postulates, Bloch sphere, Single qubit states and gates, superposition; Two Qubit States and Gates - Bell States, Entanglement, CNOT gate, Phase oracles, Phase kickback, Entanglement generation  |  |                  |   |   |   |
| <b>Module:3</b>  | <b>Notation and Basis in QC Quantum gates and circuits</b>                                 | <b>6 hours</b>   |   |   |   |
| Detailed exposure of one and two qubit gates and states, Examples of Dirac's notation for quantum computing, Computational Basis, Orthonormality, Pauli Gates, Hadamard and Phase Gates- building quantum circuits   |  |                  |   |   |   |
| <b>Module:4</b>  | <b>Fundamental Algorithms in QC-1</b>  | <b>8 hours</b>   |   |   |   |
| Teleportation Algorithm, Deutsch–Josza Algorithm, Grover search algorithm: Problem definition, Amplitude amplification, Grover oracle, diffuser, multiple solutions in the search space  |  |                  |   |   |   |
| <b>Module:5</b>  | <b>Fundamental Algorithms in QC-2</b>  | <b>8 hours</b>   |   |   |   |
| Quantum Fourier Transform (QFT), and efficient representation of QFT as a quantum circuit. Application of the QFT to enable Quantum Phase Estimation (QPE). Order-finding problem – eigenvalue estimation approach to order finding – Shor's algorithm for order finding/factoring   |  |                  |   |   |   |
| <b>Module:6</b>  | <b>Measurements and Errors</b>   | <b>6 hours</b>   |   |   |   |
| Computational complexity – black-box model – lower bounds for searching – general black-box lower bounds – polynomial method – block sensitivity – adversary methods – classical error correction – classical three-bit code – fault tolerance – quantum error correction – three- and nine-qubit quantum codes – fault-tolerant   |  |                  |   |   |   |

|  |   |            |                 |
|--|---|------------|-----------------|
| quantum computation  |   |            |                 |
| <b>Module:7</b>  | <b>Programming a quantum computer</b>   |            | <b>4 hours</b>  |
| The IBMQ, coding a quantum computer using a Simulator to carry out basic quantum measurement and state analysis. |   |            |                 |
| <b>Module:8</b>  | <b>Contemporary Issues</b>  |            | <b>2 hours</b>  |
|  |   |            |                 |
|  |   |            |                 |
| <b>Total Lecture hours:</b>  |   |            | <b>45 hours</b> |
| <b>Text Book(s)</b>  |   |            |                 |
