

School of Computer Science and Engineering

CURRICULUM AND SYLLABI

(2022-2023)

B. Tech. Computer Science and Engineering (Information Security)

VISION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

Transforming life through excellence in education and research.

MISSION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

World class Education: Excellence in education, grounded in ethics and critical thinking, for improvement of life.

Cutting edge Research: An innovation ecosystem to extend knowledge and solve critical problems.

Impactful People: Happy, accountable, caring and effective workforce and students.

Rewarding Co-creations: Active collaboration with national & international industries & universities for productivity and economic development.

Service to Society: Service to the region and world through knowledge and compassion.

VISION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

To be a world-renowned centre of education, research and service in computing and allied domains.

MISSION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

- To offer computing education programs with the goal that the studentsbecome technically competent and develop lifelong learning skill.
- To undertake path-breaking research that creates new computing technologies and solutions for industry and society at large.
- To foster vibrant outreach programs for industry, research organizations, academia and society.

B. Tech. CSE (Information Security)

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

- 1. Graduates will be engineering practitioners and leaders, who would help solve industry's technological problems.
- 2. Graduates will be engineering professionals, innovators or entrepreneurs engaged in technology development, technology deployment, or engineering system implementation in industry.
- 3. Graduates will function in their profession with social awareness and responsibility.
- 4. Graduates will interact with their peers in other disciplines in industry and society and contribute to the economic growth of the country.
- 5. Graduates will be successful in pursuing higher studies in engineering or management.
- 6. Graduates will pursue career paths in teaching or research.

B. Tech. CSE (Information Security)

PROGRAMME OUTCOMES (POs)

- PO_01: Having an ability to apply mathematics and science in engineering applications.
- PO_02: Having a clear understanding of the subject related concepts and of contemporary issues and apply them to identify, formulate and analyse complex engineering problems.
- PO_03: Having an ability to design a component or a product applying all the relevant standards and with realistic constraints, including public health, safety, culture, society and environment
- PO_04: Having an ability to design and conduct experiments, as well as to analyse and interpret data, and synthesis of information
- PO_05: Having an ability to use techniques, skills, resources and modern engineering and IT tools necessary for engineering practice
- PO_06: Having problem solving ability- to assess social issues (societal, health, safety, legal and cultural) and engineering problems
- PO_07: Having adaptive thinking and adaptability in relation to environmental context and sustainable development
- PO_08: Having a clear understanding of professional and ethical responsibility
- PO_09: Having cross cultural competency exhibited by working as a member or in teams
- PO_10: Having a good working knowledge of communicating in English communication with engineering community and society
- PO_11: Having a good cognitive load management skills related to project management and finance
- PO_12: Having interest and recognize the need for independent and lifelong learning

B. Tech. CSE (Information Security)

PROGRAMME SPECIFIC OUTCOMES (PSOs)

- 1. Apply computing theory, languages and algorithms, as well as mathematical and statistical models, and the principles of optimization to appropriately formulate and use data analysis.
- 2. Apply the principles and techniques of database design, administration, and implementation to enhance data collection capabilities and decision-support systems. Ability to critique the role of information and analytics in supporting business processes and functions.
- 3. Invent and use appropriate models of data analysis, assess the quality of input, derive insight from results, and investigate potential issues. Also to organize big data sets into meaningful structures, incorporating data profiling and quality standards.

SCHOOL OF COMPUTER SCIENCE AND ENGINEERING B. Tech. CSE (Information Security)

Curriculum for 2022-2023 Batch

	Category Credit D	Detail	
SI.No.	Description	Credits	Maximum Credit
1	FC - Foundation Core	53	53
2	DLES - Discipline-linked Engineering Sciences	12	12
3	DC - Discipline Core	47	47
4	SPE - Specialization Elective	21	21
5	PI - Projects and Internship	9	9
6	OE - Open Elective	9	9
7	BC - Bridge Course	0	0
8	NGCR - Non-graded Core Requirement	11	11
	Total Credits	162	

	Foundation Core											
sl.no	Course Code	Course Title	Course Type	Ver sio n	L	Т	Р	J	Credits			
1	BCHY101L	Engineering Chemistry	Theory Only	1.0	3	0	0	0	3.0			
2	BCHY101P	Engineering Chemistry Lab	Lab Only	1.0	0	0	2	0	1.0

		3	0	0	3
Pre-requisite	NIL	Syllab	us \	/ersi	on
			1.0)	

- To acquaint students with the basic concepts of fundamental component, architecture, register organization and performance metrics of a computer and to impart the knowledge of data representation in binary and to understand the implementation of arithmetic algorithms in a typical computer.
- To teach students how to describe machine capabilities and design an effective data path design for instruction execution. To introduce students to syntax and semantics of machine level programming.
- To make students understand the importance of memory systems, IO interfacing techniques and external storage and their performance metrics for a typical computer. And explore various alternate techniques for improving the performance of a processor.

Course Outcomes

On completion of this course, student should be able to:

- 1. Differentiate Von Neumann, Harvard, and CISC and RISC architectures. Analyze the performance of machine with different capabilities. Recognize different instruction formats and addressing modes. Validate efficient algorithm for fixed point and floating point arithmetic operations.
- 2. Explain the importance of hierarchical memory organization. Able to construct larger memories. Analyze and suggest efficient cache mapping technique and replacement algorithms for given design requirements. Demonstrate hamming code for error detection and correction.
- Understand the need for an interface. Compare and contrast memory mapping and IO mapping techniques. Describe and Differentiate different modes of data transfer. Appraise the synchronous and asynchronous bus for performance and arbitration.
- 4. Assess the performance of IO and external storage systems. Classify parallel machine models. Analyze the pipeline hazards and solutions.

Module:1 Introduction To Computer Architecture and Organization 5 Hours

Overview of Organization and Architecture –Functional components of a computer: Registers and register files - Interconnection of components - Overview of IAS computer function - Organization of the von Neumann machine - Harvard architecture - CISC & RISC Architectures.

Module:2 Data Representation and Computer Arithmetic 5 Hours

Algorithms for fixed point arithmetic operations: Multiplication (Booths, Modified Booths), Division (restoring and non-restoring) - Algorithms for floating point arithmetic operations - Representation of nonnumeric data (character codes).

Module:3 Instruction Sets and Control Unit

Computer Instructions: Instruction sets, Instruction Set Architecture, Instruction formats, Instruction set categories - Addressing modes - Phases of instruction cycle - ALU - Datapath and control unit: Hardwired control unit and Micro programmed control unit - Performance metrics: Execution time calculation, MIPS, MFLOPS.

Module:4 Memory System Organization and Architecture 7 Hours

Memory systems hierarchy: Characteristics, Byte Storage methods, Conceptual view of memory cell - Design of scalable memory using RAM's-ROM's chips - Construction of larger size memories - Memory Interleaving - Memory interface address map- Cache memory: principles, Cache memory management techniques, Types of caches, caches misses, Mean

9 Hours

memory ac	cess time	evaluation	of cache.

Module:5 Interfacing and Communication

5 Hours

I/O fundamentals: handshaking, buffering, I/O Modules - I/O techniques: Programmed I/O, Interrupt-driven I/O, Direct Memory Access, Direct Cache Access - Interrupt structures: Vectored and Prioritized-interrupt overhead - Buses: Synchronous and asynchronous - Arbitration.

Module:6 Subsystems

5 Hours

External storage systems: Solid state drivers - Organization and Structure of disk drives: Electronic- magnetic and optical technologies - Reliability of memory systems - Error detecting and error correcting systems - RAID Levels - I/O Performance

Module:7 High Performance Processors

7 Hours

Classification of models - Flynn's taxonomy of parallel machine models (SISD, SIMD, MISD, MIMD) - Pipelining: Two stages, Multi stage pipelining, Basic performance issues in pipelining, Hazards, Methods to prevent and resolve hazards and their drawbacks - Approaches to deal branches - Superscalar architecture: Limitations of scalar pipelines, superscalar versus super pipeline architecture, superscalar techniques, performance evaluation of superscalar architecture - performance evaluation of parallel processors: Amdahl's law, speed-up and efficiency.

Module:8	Contemporary Issues	2 Hours
	Total Lecture Hours	45 Hours

				1.0		

- 1. To introduce the essential Software Engineering concepts.
- 2. To impart concepts and skills for performing analysis, design develop, test and evolve efficient software systems of various disciplines and applications
- 3. To make familiar about engineering practices, standards and metrics for developing software components and products.

Course Outcomes

On completion of this course, student should be able to:

- 1. Apply and assess the principles of various process models for the software development.
- Demonstrate various software project management activities that include planning , Estimations, Risk assessment and Configuration Management
- 3. Perform Requirements modelling and apply appropriate design and testing heuristics to produce quality software systems.
- 4. Demonstrate the complete Software life cycle activities from requirements analysis to maintenance using the modern tools and techniques.
- 5. Escalate the use of various standards and metrics in evaluating the process and product.

Module:1 Overview Of Software Engineering

6 hours

Nature of Software, Software Engineering, Software process, project, product, Process Models

Classical Evolutionary models, Introduction to Agility - Agile Process-Extreme programming - XP Process - Principles of Agile Software Development framework - Overview of System Engineering

Module:2 Introduction To Software Project Management

6 hours

Planning, Scope, Work break-down structure, Milestones, Deliverables, Cost and Estimates - (Human Resources, Time-scale, Costs), Risk Management, RMMM Plan, CASE TOOLS, Agile Project Management, Managing team dynamics and communication, Metrics and Measurement

Module:3 | Modelling Requirements

8 hours

Software requirements and its types, Requirements Engineering process, Requirement Elicitation, System Modeling – Requirements Specification and Requirement Validation, Requirements Elicitation techniques, Requirements management in Agile.

Module:4 | Software Design

8 hours

Design concepts and principles - Abstraction - Refinement - Modularity Cohesion coupling, Architectural design, Detailed Design Transaction Transformation, Refactoring of designs, Object oriented Design User-Interface Design

Module:5 Validation And Verification

7 hours

Strategic Approach to Software Testing, Testing Fundamentals Test Plan, Test Design, Test Execution, Reviews, Inspection and Auditing – Regression Testing – Mutation Testing - Object oriented testing - Testing Web based System - Mobile App testing – Mobile test Automation and tools – DevOps Testing – Cloud and Big Data Testing

Module:6 Software Evolution

		3	0	0	3
Pre-requisite	NIL	Syllal	ous	vers	sion
			1.	0	

- 1. To understand the concepts of File system and structure of the database; Designing an Entity-Relationship model for a real-life application and Mapping a database schema from the ER model.
- 2. To differentiate various normal forms, evaluate relational schemas for design qualities and optimize a query.
- 3. To impart the working methodologies of transaction management, understand concurrency control, recovery, indexing, access methods and fundamental view on unstructured data and its management.

Course Outcomes

On completion of this course, student should be able to:

- 1. Comprehend the role of database management system in an organization and design the structure and operation of the relational data model.
- 2. Develop a database project depending on the business requirements, considering various design issues.
- 3. List the concepts of indexing and accessing methods.
- 4. Explain the concept of a database transaction processing and comprehend the concept of database facilities including concurrency control, backup and recovery.
- 5. Review the fundamental view on unstructured data and describe other emerging database technologies.

Module:1 Database Systems Concepts and Architecture 4 hours

Need for database systems – Characteristics of Database Approach – Advantages of using DBMS approach - Actors on the Database Management Scene: Database Administrator - Classification of database management systems - Data Models - Schemas and Instances - Three-Schema Architecture - The Database System Environment - Centralized and Client/Server Architectures for DBMSs – Overall Architecture of Database Management Systems

Module:2 Relational Model and E-R Modeling

6 hours

Relational Model: Candidate Keys, Primary Keys, Foreign Keys - Integrity Constraints - Handling of Nulls - Entity Relationship Model: Types of Attributes, Relationships, Structural Constraints, Relational model Constraints – Mapping ER model to a relational schema – Extended ER Model - Generalization – Specialization – Aggregations.

Module:3 Relational Database Design

6 hours

Database Design – Schema Refinement - Guidelines for Relational Schema - Functional dependencies - Axioms on Functional Dependencies- Normalization: First, Second and Third Normal Forms - Boyce Codd Normal Form, Multi-valued dependency and Fourth Normal form - Join dependency and Fifth Normal form

Module:4 Physical Database Design and Query Processing

8 hours

File Organization - Indexing: Single level indexing, multi-level indexing, dynamic multilevel Indexing - B+ Tree Indexing - Hashing Techniques: Static and Dynamic Hashing - Relational Algebra - Translating SQL Queries into Relational Algebra - Query Processing - Query Optimization: Algebraic Query Optimization, Heuristic query optimization Rules, Join Query Optimization using Indexing and Hashing - Tuple Relational Calculus.

Module:5 Transaction Processing and Recovery

8 hours

Introduction to Transaction Processing - Transaction concepts: ACID Properties of Transactions, Transaction States - Serial and Serializable Schedules - Schedules based on recoverability - Schedules based on Serializability - Conflict Serializability - Recovery Concepts: Log Based Recovery Protocols, Recovery based on deferred update, Recovery techniques based on immediate update - Shadow Paging Algorithm Module:6 Concurrency Control In Transaction 8 hours Processing Concurrent Transactions - Lost Update Problem - Concurrency Control Techniques: Time Stamp Based Protocols, Thomas Write Rule, Lock Based Protocols, Lock Compatibility Matrix, - Two-Phase Locking Protocol - Lock Conversions - Graph Based Protocols for Concurrency Control - Tree Protocol for Concurrency Control - Deadlocks Based on Locks in Transactions - Deadlock Handling Techniques - Transaction Deadlock Detection Techniques - Transaction Deadlock Prevention Techniques - Multi-Granularity Locking for avoiding Transaction Deadlocks Module:7 NOSQL Database Management 3 hours Introduction, Need of NoSQL, CAP Theorem, different NoSQL data bases: Key-value data stores, Columnar families, Document databases, Graph databases Module:8 Contemporary Issues 2 Hours Total Lecture hours: 45 hours Text Book 1. R. Elmasri & S. B. Navathe, Fundamentals of Database Systems, Addison Wesley, 7th Edition, 2016 Reference Books 1. A. Silberschatz, H. F. Korth & S. Pre-requisite Syllabus version	BC	SE302P	Database Systems Lab		L	T	Р	С
Course Objectives 1. Basic ability to understand the concepts of File system and structure of the database Designing an Entity-Relationship model for a real-life application and Mapping a database schema from the ER model. 2. Differentiate various normal forms, evaluate relational schemas for design qualities and optimize a query. 3. Explain the working methodologies of transaction management and give a solution during a transaction failure. Understand the basic concepts on concurrency control recovery, indexing, access methods and fundamental view on unstructured data and its management. Course Outcome On completion of this course, student should be able to: 1. Design the structure and operation of the relational data model. 2. Examine the data requirements of the real world and design a database management system. Indicative Experiments 1. Data Definition and Data Manipulation Language 2. Constraints 3. Single row functions 4. Operators and group functions 5. Sub query, views and joins 6. High Level Language Extensions - Procedures, Functions, Cursors and Triggers Total Laboratory Hours 30 hours Text Book 1. R. Elmasri & S. B. Navathe, Fundamentals of Database Systems, Addison Wesley, 7th Edition, 2016 Reference Books 1. A. Silberschatz, H. F. Korth & S. Pre-requisite	NIL	Syllabus version				
		1.0				

- 1. To expose students to various challenges and constraints of special purpose computing systems in terms of resources and functional requirements.
- 2. To introduce students to various components of typical embedded systems viz., sensors and actuators, data converters, UART etc., their interfacing, programming environment for developing any smart systems and various serial communication protocols for optimal components interfacing and communication.
- 3. To make students understand the importance of program modeling, optimization techniques and debugging tools for product development and explore various solutions for real time scheduling issues in terms of resources and deadline.

Course Outcomes

On completion of this course, students should be able to:

- 1. Identify the challenges in designing an embedded system using various microcontrollers and interfaces.
- 2. To summaries the functionality of any special purpose computing system, and to propose smart solutions to engineering challenges at the prototype level.
- To examine the working principle and interface of typical embedded system components, create programme models, apply various optimization approaches including simulation environment and demonstration using debugging tools.
- 4. To evaluate the working principle of serial communication protocols and their proper use, as well as to analyze the benefits and drawbacks of real-time scheduling algorithms and to recommend acceptable solutions for specific challenges.

Module:1 I	ntroduction	5 hours					
Overview of Embedded Systems, Design challenges, Embedded processor technology,							
Hardware De	Hardware Design, Micro-controller architecture -8051, PIC, and ARM.						
Module:2 I/	O Interfacing Techniques	8 hours					
Memory inte	rfacing, A/D, D/A, Timers, Watch-dog timer, Cou	nters, Encoder & Decoder,					
UART, Senso	ors and actuators interfacing.						
Module:3	Architecture of Special Purpose Computing	6 hours					
S	System						
ATM, Handh	ATM, Handheld devices, Data Compressor, Image Capturing Devices-Architecture and						
Requirements	s, Challenges & Constraints of special purpose com	puting system.					
Module:4 F	Programming Tools	7 hours					
Evolution of	embedded programming tools, Modelling program	s, Code optimization, Logic					
analyzers, Pr	ogramming environment.	-					
Module:5 F	Real Time Operating System	8 hours					
Classification of Real time system, Issues & challenges in RTS, Real time scheduling							
schemes- ED	F-RMS & Hybrid techniques, eCOS, POSIX, Proto	threads.					
Module:6 E	mbedded Networking Protocols	5 hours					
Inter Integrat	ted Circuits (I2C), Controller Area Network, Emb	edded Ethernet Controller,					
RS232, Bluet	tooth, Zigbee, Wifi.						
Module:7 A	Applications of Embedded Systems	4 hours					
Introduction to embedded system applications using case studies - Role in Agriculture							
sector, Automotive electronics, Consumer Electronics, Industrial controls, Medical							
Electronics.							
Module:8 C	Contemporary Issues	2 hours

BCSE307L	Compiler Design		L		Т	Р	С
			3	;	0	0	3
Pre-requisite	NIL		Sylla	ıbı	us \	/ers	ion
					1.0		
Course Objectives							

- 1. To provide fundamental knowledge of various language translators.
- To make students familiar with lexical analysis and parsing techniques.
- 3. To understand the various actions carried out in semantic analysis.
- 4. To make the students get familiar with how the intermediate code is generated.
- 5. To understand the principles of code optimization techniques and code generation.
- 6. To provide foundation for study of high-performance compiler design.

Course Outcomes

- 1. Apply the skills on devising, selecting, and using tools and techniques towards compiler desian
- Develop language specifications using context free grammars (CFG).
- 3. Apply the ideas, the techniques, and the knowledge acquired for the purpose of developing software systems.
- 4. Constructing symbol tables and generating intermediate code.
- 5. Obtain insights on compiler optimization and code generation.

Module:1 | INTRODUCTION TO COMPILATION AND LEXICAL ANALYSIS | 7 hours

Introduction to LLVM - Structure and Phases of a Compiler-Design Issues-Patterns-Lexemes-Tokens-Attributes-Specification of Tokens-Extended Regular Expression- Regular expression to Deterministic Finite Automata (Direct method) - Lex - A Lexical Analyzer Generator.

Module:2 | SYNTAX ANALYSIS

8 hours

Role of Parser- Parse Tree - Elimination of Ambiguity - Top Down Parsing - Recursive Descent Parsing - LL (1) Grammars - Shift Reduce Parsers- Operator Precedence Parsing -LR Parsers, Construction of SLR Parser Tables and Parsing- CLR Parsing- LALR Parsing.

Module:3 | SEMANTICS ANALYSIS

Syntax Directed Definition - Evaluation Order - Applications of Syntax Directed Translation -Syntax Directed Translation Schemes - Implementation of L-attributed Syntax Directed Definition.

Module:4 | INTERMEDIATE CODE GENERATION

5 hours

Variants of Syntax trees - Three Address Code- Types - Declarations - Procedures -Assignment Statements - Translation of Expressions - Control Flow - Back Patching- Switch Case Statements.

Module:5 | CODE OPTIMIZATION

6 hours

Loop optimizations- Principal Sources of Optimization -Introduction to Data Flow Analysis -Basic Blocks - Optimization of Basic Blocks - Peephole Optimization- The DAG Representation of Basic Blocks -Loops in Flow Graphs - Machine Independent Optimization-Implementation of a naïve code generator for a virtual Machine- Security checking of virtual machine code.

Module:6 | CODE GENERATION

Issues in the design of a code generator- Target Machine- Next-Use Information - Register Allocation and Assignment- Runtime Organization- Activation Records.

Module:7 PARALLELISM

7 hours

Parallelization- Automatic Parallelization- Optimizations for Cache Locality and Vectorization- Domain Specific Languages-Compilation- Instruction Scheduling and Software Pipelining- Impact of Language Design and Architecture Evolution on Compilers-Static Single Assignment

Module:8 | Contemporary Issues

2 hours

				Total L	ecture hours:	45 hours

BCSE308L Computer Networks				T	Р	С	
	-		3	0	0	3	
Pre-requisite	NIL Syllabus version						
	1.0						
Course Objectives							
	To build an understanding among students about the fundamental concepts of computer To build an understanding among students about the fundamental concepts of computer						

- networking, protocols, architectures, and applications.
- 2. To help students to acquire knowledge in design, implement and analyze performance of OSI and TCP-IP based Architectures.
- 3. To identify the suitable application layer protocols for specific applications and its respective security mechanisms.

Course Outcomes

On completion of this course, student should be able to:

- 1. Interpret the different building blocks of Communication network and its architecture.
- 2. Contrast different types of switching networks and analyze the performance of network
- 3. Identify and analyze error and flow control mechanisms in data link layer.
- 4. Design sub-netting and analyze the performance of network layer with various routing protocols.
- 5. Compare various congestion control mechanisms and identify appropriate transport layer protocol for real time applications with appropriate security mechanism.

Module:1	Networking Principles and Layered Architecture	6 hours						
	Data Communications and Networking: A Communications Model – Data Communications - Evolution of network, Requirements , Applications, Network Topology (Line configuration,

Course Objectives	BCSE318L	DATA PRIVACY			-	-	-
1.0 Course Objectives 1. To impart the need of data privacy.	Dro roquioito	AIII	Cvi				
Course Objectives 1. To impart the need of data privacy. 2. To categorize the statistical and computational techniques required to share data, with a primary focus on the social, and health sciences. 3. To formulate architectural, algorithmic, and technological foundations for the maintaining the data privacy. Course Outcomes	Pre-requisite	NIL	Syl			ersi	on
1. To impart the need of data privacy. 2. To categorize the statistical and computational techniques required to share data, with a primary focus on the social, and health sciences. 3. To formulate architectural, algorithmic, and technological foundations for the maintaining the data privacy. Course Outcomes After completion of this course, the student shall be able to: 1. Characterize basic rules, principles for protecting privacy and personally identifiable information. 2. Formulate data that supports useful statistical inference while minimizing the disclosure of sensitive information. 3. Identify the list of threats on the various types of anonymized data. 4. Classify and analyze the methods of test data generation with Privacy and utility. Module:1 Data privacy and Importance 5 hours Need for Sharing Data - Methods of Protecting Data - Importance of Balancing Data Privacy and Utility - Disclosure - Tabular Data - Micro data - Approaches to Statistical disclosure control - Ethics - principles - guidelines and regulations. Module:2 Microdata Disclosure - Disclosure risk - Estimating re-identification risk - Non-Perturbative Micro data masking - Perturbative Micro data masking - Information loss in Micro data. Module:3 Static Data Anonymization on Multidimensional Data - Thours Privacy - Preserving Methods - Classification of Data in a Multidimensional Dataset - Groupbased Anonymization: k-Anonymity, I-Diversity, t-Closeness. Module:4 Anonymization on Complex Data Structures 8 hours Privacy-Preserving Graph Data, Privacy-Preserving Time Series Data, Time Series Data Protection Methods, Privacy Preservation of Longitudinal Data, Privacy Preservation of Transaction Data Threats to Anonymized Data, Threats to Data Structures, Threats by Anonymization Techniques: Randomization, k-Anonymization, I-Diversity, t-Closeness. Module:6 Dynamic Data Protection: Tokenization, Understanding Tokenization, Use Cases for Dynamic Data Protection Act, Swiss Data Protection Act, HIPPA, General Data Protection Regula	Course Objective				1.0		
2. To categorize the statistical and computational techniques required to share data, with a primary focus on the social, and health sciences. 3. To formulate architectural, algorithmic, and technological foundations for the maintaining the data privacy. Course Outcomes After completion of this course, the student shall be able to: 1. Characterize basic rules, principles for protecting privacy and personally identifiable information. 2. Formulate data that supports useful statistical inference while minimizing the disclosure of sensitive information. 3. Identify the list of threats on the various types of anonymized data. 4. Classify and analyze the methods of test data generation with Privacy and utility. Module:1 Data privacy and Importance 5 hours Need for Sharing Data - Methods of Protecting Data - Importance of Balancing Data Privacy and Utility - Disclosure - Tabular Data - Micro data - Approaches to Statistical disclosure control - Ethics - principles - guidelines and regulations. Module:2 Microdata 7 hours Disclosure - Disclosure risk - Estimating re-identification risk - Non-Perturbative Micro data masking - Information loss in Micro data. Module:3 Static Data Anonymization on Multidimensional Data 7 hours Privacy - Preserving Methods - Classification of Data in a Multidimensional Dataset - Group-based Anonymization: k-Anonymity, I-Diversity, t-Closeness. Module:4 Anonymization on Complex Data Structures 8 hours Privacy-Preserving Graph Data, Privacy-Preserving Time Series Data, Time Series Data Protection Data. Module:5 Threats to Anonymized Data Threats to Data Structures, Threats by Anonymization Techniques: Randomization, k-Anonymization, I-Diversity, t-Closeness. Module:6 Dynamic Data Protection Senefits of Tokenization Compared to Other Methods, Components for Tokenization. Benefits of Tokenization. Use Cases for Dynamic Data Protection Senefits of Tokenization Compared to Other Methods, Components for Tokenization. Benefits of Tokenization Compared to Other Methods, Components

Pre-requisite	NIL	Syllabus version				on
	1.0					

- 1. To understand the system security-related incidents and insight on potential defenses, countermeasures against common vulnerabilities.
- 2. To provide the knowledge of installation, configuration, and troubleshooting of information security devices.
- 3. To make students familiarize themselves with the tools and common processes in information security audits and analysis of compromised systems.

Course Outcome

After completion of this course, the student shall be able to:

- 1. Familiarized with the basic principles for Information Gathering and Detecting Vulnerabilities in the system.
- 2. Gain knowledge about the various attacks caused in an application.
- 3. Acquire knowledge about the tools used for penetration testing.
- 4. Learn the knowledge into practice for testing the vulnerabilities and identifying threats.
- 5. Determine the security threats and vulnerabilities in computer networks using penetration testing techniques.

Module:1Pentesting Fundamentals5 hoursVulnerabilityAssessment (VA)- Pentesting Analysis (PTA) -Types of VulnerabilityAssessments-Modern VulnerabilityManagement Program-Ethical Hacking terminology- Fivestages of hacking- VulnerabilityResearch - Impact of hacking - Legal implication of hacking -Compare VulnerabilityAssessment (VA) and Penetration Testing (PT) Tools.Module:2Information Gathering Methodologies5 hours

Competitive Intelligence- DNS Enumerations- Social Engineering attacks - Scanning and Enumeration. Port Scanning: Network Scanning, Vulnerability Scanning, scanning tools- OS and Fingerprinting Enumeration - System Hacking Password.

Module:3 | System Hacking

3 hours

Password cracking techniques- Key loggers- Escalating privileges- Hiding Files, Active and Passive sniffing - ARP Poisoning - IP Poisoning and MAC Flooding.

Module:4 Wireless Pentesting

4 hours

Wi-Fi Authentication Modes - Bypassing WLAN Authentication - Types of Wireless Encryption - WLAN Encryption Flaws - Access Point Attacks - Attacks on the WLAN Infrastructure - Buffer Overloading.

Module:5 The Metasploit Framework

3 hours

Metasploit User Interfaces and Setup - Getting Familiar with MSF Syntax - Database Access - Auxiliary Modules- Payloads - Staged vs Non-Staged Payloads - Meterpreter Payloads - Experimenting with Meterpreter.

Module:6 | Web Application Attacks

4 hours

Web Application Assessment Methodology – Enumeration - Inspecting URLs - Inspecting Page Content - Viewing Response Headers - Inspecting Sitemaps - Locating Administration Consoles.

Module:7	Exploiting Web-Based Vulnerabilities	4 hours						
Exploiting A	Exploiting Admin Consoles - Cross-Site Scripting (XSS) - SQL Injection.							
Module:8	Contemporary Issues	2 hours						
	Total Lecture hours:	30 hours

BCSE321L	MALWARE ANALYSIS		L	T	Р	С
			2	0	0	2
Pre-requisite	NIL	Syllabus version			ion	
			1.0)		

- 1. To introduce the malware taxonomy and malware analysis tools.
- 2. To identify and analyze malware samples using static, dynamic analysis, and reverse engineering techniques.
- 3. To detect and analyze malicious documents and mobile malware.

Course Outcome

After completion of this course, the student shall be able to:

- Possess the skills to carry out static and dynamic malware analysis on various malware samples.
- 2. Understand the executable formats, Windows internals, and APIs.
- 3. Apply techniques and concepts to unpack, extract, and decrypt malware.
- Comprehend reverse-engineering of malware and anti-malware analysis techniques.
- Achieve proficiency with industry-standard malware analysis tools.

Module:1 Fundamentals of Malware Analysis

5 hours

Malware taxonomy - Malware analysis techniques - Packed and Obfuscated Malware - Portable Executable File Format: Headers and Sections, Malware Analysis in Virtual Machines - Malware Analysis Tools: ProcMon/ ProcExplore, BinText, FileAlyzer, OllyDbg, etc.

Module:2 | Static Analysis

4 hours

File signature analysis and Identifying file dependencies -Database of file hashes. String analysis - Local and online malware sandboxing - Levels of Abstraction - x86 Architecture - x86/x86_64 Assembly - Static Analysis Tools: PeiD, Dependency Walker, Resource Hacker.

Dynamic Analysis Module:3

4 hours

Source level vs. Assembly level Debuggers - Kernel vs. User-Mode Debugging - Exceptions - Modifying Execution with a Debugger - Modifying Program Execution in Practice - DLL analysis - Dynamic Analysis Tools: Virustotal, Malware Sandbox, Windows Sysinternals

Module:4 Reverse Engineering

4 hours

Reverse engineering malicious code - Identifying malware passwords - Bypassing authentication -Advanced malware analysis: Virus, Trojan and APK Analysis - Reverse Engineering Tools: IDA Pro and OLLYDBG

Module:5 Malicious Document Analysis

3 hours

PDF and Microsoft Office document structures – Identify PDF and office document vulnerabilities - Analysis of suspicious websites - Examining malicious documents: word, XL, PDF, and RTF files - Malware extraction and analysis tools.

Module:6 Anti-Reverse-Engineering

3 hours

Anti-Disassembly - Anti-Debugging - Anti-Forensic Malware - Packers and Unpacking - Shellcode Analysis - 64-Bit Malware

Module:7 Mobile Malware Analysis

5 hours

Mobile application penetration testing - Android and iOS Vulnerabilities - Exploit Prevention - Handheld Exploitation - Android Root Spreading and Distribution Android

Debugging - Machine learning techniques for malware analysis: Support Vector Machine										
		arest Neighbor (KNN), Ra	ndom Forest (RF)	, Decision	Trees (DT), Naïve					
Bayes	s (NB),	and Neural Networks (NN).

BCSE321P	MALWARE ANALYSIS LAB		L	1	Р	С				
			0	0	2	1				
Pre-requisite	NIL	Sylla	bu	s v	ersi	ion				
			1.0)						
Course Objectives										

- To introduce the malware taxonomy and malware analysis tools.
 To identify and analyze malware samples using static, dynamic analysis, and reverse engineering techniques.
- 3. To detect and analyze malicious documents and mobile malware.

Course Outcome

After completion of this course, the student shall be able to:

- 1. Apply techniques and concepts to unpack, extract, and decrypt malware.
- 2. Achieve proficiency with industry-standard malware analysis tools.

2. 7.0	shieve proficiency with industry-standard malware analysis tools.
Indi	cative Experiments
1	Examining PE Files using PEview, PE explorer and Resource Hacker
ı	Disassembling Portable Executable (PE32)
	imports, exports, functions, main address, malicious string locations
2	Sandboxing malware using SANDBOX tool, Virus Total Analysis, Anyrun Analysis
3	Basic malware analysis:
	file compilation date
	imports/ exports, suspicious strings
	run-time effect
	procmon filter
	 hist -based signatures revealing files
	registry keys, processes, services
	network-based signatures
4	Advanced static malware analysis
	 find address of main, code constructs, suspicious strings,
	 imported functions, their tasks,
	intention of the malware
	impact of the malware via hex code
5	Analyze the malware using IDA Pro for reverse-engineering the malware: strings
	analysis, local variables, graph mode to cross-references, Analyzing Functions
6	Analyze the malware using OllyDbg: Debug the malware, Viewing Threads and
	Stacks, OllyDbg Code-Execution Options, Breakpoints, Loading DLLs, Exception
	Handling
7	Advanced analysis of Windows programs for processes, interactive remote
_	shell, uploaded file, address of the subroutine, return value, Windows APIs
8	Malware behavior analysis
	finding the source of malware - spiriture as a specifical process and instance as a spiriture as a specifical process.
	persistence mechanism, multiple instances replication mechanisms, hiding etrategies.
	hiding strategiesAPI calls for keylogging, constants involved
	post-infection actions of the malware, mutex, SendMessage API structure
9	Malware self-defense, packing and unpacking, obfuscation and de-obfuscation
3	using Packers and obfuscation tools
10	Anti-disassembly and anti-debugging techniques used in the binary by
	patching the PE, set a breakpoint in the malicious subroutine
11	Analyzing malicious Microsoft Office and Adobe PDF documents to locate malicious
	, , , , , , , , , , , , , , , , , , ,

	embedded code such as shellcode, VBA macros or JavaScript, disassemble and/ or debug, shellcode analysis

		1.0				

- 1. To present a comprehensive perception of digital forensic principles, collection, preservation, and analysis of digital evidence.
- 2. To enlighten the importance of forensic procedures, legal considerations, digital evidence controls, and the documentation of forensic analysis.
- 3. To develop a comprehension of the different tools and methods for conducting digital forensic acquisition and analysis.

Course Outcomes

After completion of this course, the student shall be able to:

- 1. Understand the responsibilities and liabilities of a computer forensic investigator
- 2. Seize a computer from a crime scene without damage and follow the legal procedures and standards.
- 3. Demonstrate the ability to perform forensic data acquisition and analysis.
- 4. Analyze and retrieve hidden and damaged files from different operating systems.
- 5. Apply forensics to recent technologies such as smart phones, email, cloud and social media.

Module:1 Understanding Digital Forensics and Legal 3 hours Aspects

Understanding computer forensics - Preparing for computer investigation - Maintaining professional conduct - understanding computer investigations - Taking a systematic approach – Corporate Hi-Tech investigations – Conducting an investigation.

Module:2 | Acquisition and Storage of Data

4 hours

Understanding Storage Formats for Digital Evidence - Determining the Best Acquisition Method - Contingency Planning for Image Acquisitions - Using Acquisition Tools - Validating Data Acquisitions - Performing RAID Data Acquisitions - Using Remote Network Acquisition Tools - Storing Digital Evidence - Obtaining a Digital Hash - Sample Cases.

Module:3 | Working with Windows

5 hours

Understanding File Systems - Exploring Microsoft File Structures - Examining NTFS Disks -Understanding Whole Disk Encryption - Understanding the Windows Registry -Understanding Microsoft Startup Tasks - Understanding MS-DOS Startup Tasks - Evaluating Computer Forensics Tool Needs - Computer Forensics Software and Hardware Tools.

Module:4 | Working with Linux/Unix Systems

4 hours

UNIX and Linux Overview - Inodes - Boot Process - Drives and Partition Schemes -Examining disk Structures - Understanding Other Disk Structures - Ownership and Permissions, File Attributes, Hidden Files, User Accounts - Case studies - Validating Forensic Data - Addressing Data-Hiding Techniques - Locating and Recovering Graphics File.

Module:5 | Email and Social Media Forensics

4 hours

Investigating E-mail crimes and Violations - Applying Digital Forensics Methods to Social Media Communications - Social Media Forensics on Mobile Devices - Forensics Tools for Social Media Investigations.

Module:6 | Mobile Forensics 4 hours Mobile phone basics - Acquisition procedures for mobile - Android Device - Android Malware SIM Forensic Analysis – Case study. Module:7 | Cloud Forensics

4 hours

Wo	Working with the cloud vendor, obtaining evidence, reviewing logs and APIs.

BCSE323L	DIGITAL WATERMARKING AND STEGANOGRAI	L	Т	Р	С	
			3	0	0	3
Pre-requisite	Pre-requisite NIL Sylla				ersi	on

- 1. To understand the basic principles, characteristics, various approaches and applications of digital watermarking and steganography.
- 2. To apply digital watermarking techniques as an authentication tool for distribution of content over the Internet and steganography techniques for covert communication.
- 3. To impart knowledge on the basics of the counter measures like steganalysis for assessing the data hiding methods.

Course Outcome

After completion of this course, the student shall be able to:

- 1. Learn the fundamental concepts, principles, characteristics and performance measures of digital watermarking and steganography.
- 2. Acquire the various concepts of watermarking for digital authentication and authorization schemes related to electronic documents, image and video.
- 3. Gathering the various concepts of steganography to access the sensitive information concealing of message, image, audio or video within another file.
- 4. Design and implement efficient data hiding methods against steganalysis techniques.

Module:1 Fundamentals of Digital Watermarking

6 hours

Importance of Watermarking - Application and Properties of Watermarking - Models of Watermarking - Basic Message Coding: Mapping Message into Message Vectors, Error Correction Coding - Watermarking with Side Information - Analyzing Errors.

Module:2 Digital Watermarking Schemes

7 hours

Spatial Domain: Correlation based Watermarking, Least Significant bit Watermarking - Frequency domain: Discrete Wavelet Transform Watermarking, Discrete Fourier Transform Watermarking, Discrete Cosine Watermarking, Quantization Watermarking, Haar Transform Watermarking, Hadamard Transform Watermarking - Robust Watermarking - Fragile and Semi Fragile Watermarking.

Module:3 Digital Watermarking Security and Authentication

5 hours

Watermarking Security: Security Requirements, Watermark Security and Cryptography, Watermarking Attacks and Tools - Content Authentication: Exact Authentication, Selective Authentication, Localization, Restoration.

Module:4 Steganography

7 hours

Basics and Importance of Steganography - Applications and Properties of Steganography - Steganography: LSB embedding, Steganography in palette images -Steganography in JPEG images: JSteg data hiding in spatial and transform domain -Steganography Security.

Module:5 Audio and Video Steganography

6 hours

Audio Steganography: Temporal domain techniques, Transform domain techniques, Cepstral Domain - Video Steganography: Introduction Video Streams, Substitution-Based Techniques, Transform Domain Techniques, Adaptive Techniques, Format-Based Techniques - Cover Generation Techniques Video Quality Metrics - Perceptual Transparency Analysis - Robustness against Compression and Manipulation.

Module:6 | Wet Paper Code

6 hours

Random Linear Codes - LT Codes - Perturbed Quantization, Matrix Embedding - Matrix Embedding Theorem - Binary Hamming Codes - Q-Ary Case Random Linear Codes for Large Payloads.

Module:7 | Steganalysis

6 hours

Steganalysis Principles - Statistical Steganalysis: Steganalysis as detection problem,

	Modeling images using features, Receiver operating Characteristics - Targeted Steganalysis									
	: Sample pair analysis, Targeted attack on F5 using Calibration, Targeted attack on ±									
	_	0,		es for stega	nalysis o	f JPEG images (cover vs all-				
	stego and one class neighbor machine).
