

CURRICULUM AND SYLLABI

(2020-2021)

M.Tech (CSE) - Specialization in AI & ML

M.Tech (CSE) - Specialization in AI & ML

CURRICULUM AND SYLLABUS

(2020-2021 Admitted Students)

VISION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

Transforming life through excellence in education and research.

MISSION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

World class Education: Excellence in education, grounded in ethics and critical thinking, for improvement of life.

Cutting edge Research: An innovation ecosystem to extend knowledge and solve critical problems.

Impactful People: Happy, accountable, caring and effective workforce and students.

Rewarding Co-creations: Active collaboration with national & international industries & universities for productivity and economic development.

Service to Society: Service to the region and world through knowledge and compassion.

VISION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

To be a world-renowned centre of education, research and service in computing and allied domains.

MISSION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

- To offer computing education programs with the goal that the students become technically competent and develop lifelong learning skill.
- To undertake path-breaking research that creates new computing technologies and solutions for industry and society at large.
- To foster vibrant outreach programs for industry, research organizations, academia and society.

M.Tech (CSE) - Specialization in AI & ML

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

1. Graduates will be engineering professionals who will engage in technology development and deployment with social awareness and responsibility.

2. Graduates will function as successful practising engineer / researcher / teacher / entrepreneur in the chosen domain of study.

3. Graduates will have holistic approach addressing technological, societal, economic and sustainability dimensions of problems and contribute to economic growth of the country.

M.Tech (CSE) - Specialization in AI & ML

PROGRAMME OUTCOMES (POs)

PO_1 Having an ability to apply mathematics and science in engineering applications

PO_2 Having an ability to design a component or a product applying all the relevant standards and with realistic constraints

PO_3 Having an ability to design and conduct experiments, as well as to analyze and interpret data

PO_4 Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice

PO_5 Having problem solving ability- solving social issues and engineering problems

PO_6 Having adaptive thinking and adaptability

PO_7 Having a clear understanding of professional and ethical responsibility

PO_8 Having a good cognitive load management [discriminate and filter the available data] skills

School of Computer Science and Engineering M.Tech (CSE) - Specialization in AI & ML

PROGRAMME SPECIFIC OUTCOMES (PSOs)

1. The ability to formulate mathematical models and problem-solving skills through programming techniques for addressing real-life problems using appropriate knowledge representation, problem-solving, and learning methods.

2. Become familiar with the insights of Artificial Intelligence and Machine Learning towards problem solving, inference, perception, knowledge representation, and learning.

3. Ability to bring out the capabilities for research and development in contemporary issues and to exhibit the outcomes as technical report.

Course code	Data Structures and Algorithms Analysis	L T P J C
CSE5010		3 0 2 0 4
Pre-requisite	Nil	Syllabus version

Course Objectives:

1. To focus on the design of algorithms in various domains

2. To provide a foundation for designing efficient algorithms.

3. To provide familiarity with main thrusts of working algorithms-sufficient to gives context for formulating and seeking known solutions to an algorithmic problem.

Expected Course Outcome:

- 1. Use the fundamental data types of computing (lists, stacks, queues, priority queues, sets, maps, trees, etc.).
- 2. Understand the major techniques for implementing the fundamental data types (linked lists, binary search trees, hashing, heaps, etc.) and implement several of them.
- 3. Properly use and select data structures from language-provided data-structure libraries.
- 4. Apply basic algorithm analysis.
- 5. Understand how recursion works and write programs using recursion to solve problems.
- 6. Make informed decisions about which sorting and searching algorithms to use in specific circumstances.
- 7. The student can make the distinction between problems and their algorithmic solutions
- 8. The student can prove the correctness of a subset of the algorithms considered in the course.

Module:1 DATA STRUCTURES

3 hours

5 hours

Introduction to data structures- Arrays-Linked Lists-Doubly Linked Lists-Stack, Evaluations of expression-Conversion of Infix to postfix-Multiple stacks-Queues, Circular Queues-Priority queues-Dequeues

Module:2 TREES

Heaps, dictionaries, hash tables, bloom filters, binary search trees-, Creation-Insertion-Deletion-Update-Search operations- Recursive Tree traversal- Non-Recursive Tree Traversal, Interval trees, AVL Trees – Splay Trees – B-Trees – B⁺-Trees- Red Black Trees

Module:3	GRAPH REPRESENTATION AND	5 hours					
	ALGORITHMS						
Graphs – I	Graphs – Definitions – Representation of Graphs – Graph Traversals– Shortest path algorithm –						
Minimum	spanning tree - graph traversals. Undirected Gra	phs – Biconne	ctivity – Directed				
Graph –De	Graph – Detecting Strong Components – All Pair Shortest paths – Floyd Warshall algorithm –						
Network Flow Problem – A Simple Maximum Flow Algorithm							

Module:4SEARCHING AND SORTING3 hoursInternal Sorting- Bubble sort, Insertion sort, selection sort, Merge sort, bucket and radix sort;

·	nd order statistics. Indexed sequential searching and	Interpolation s	earch
Module:5	ALGORITHM DESIGN ANALYSIS	3 hours	
	of Algorithms in Computing – Algorithms – De		rithms – Analysing
	s – Iterative Algorithms-Asymptotic notations and t		
an algorith	m, Time-complexity of an algorithm, Performance	analysis of an	n algorithm, Master
theorem (w	vithout proof)		
Module:6	COMPUTATIONAL COMPLEXITY CLASSES	5 hours	
	ling of Computational Complexity – NP-Hard –N	-	-
	heorem – NP-Completeness Proofs – Probabili	-	
-	s – Quicksort – Approximation Algorithms – Set C	Cover and Ver	tex Cover- 3-CNF-
SAT Redu	ction Problems		
Module:7	ADVANCED ALGORITHMS AND	4 hours	
	ANALYSIS		
	Conquer, Brute force, Greedy, Recursive Backtrac		
	ain Multiplication – Elements of Dynamic Pro		-
_	ce – Basics of String – String Edit Problem-Knutl		-
	rithm- Line segments: properties, intersections; s of approximation - Vertex-cover problem	convex null 1	inding algorithms-
Linitation

V. XX.XX

Course Objectives:

The objective of this course is to

- 1. Become familiar with basic principles of AI toward problem solving, inference, perception, knowledge representation, and learning.
- 2. Elucidate the basic knowledge representation, problem solving, and learning methods of Artificial Intelligence
- 3. Assess the applicability, strengths, and weaknesses of the basic knowledge representation, problem solving, and learning methods in solving particular engineering problems

Expected Course Outcome:

- 1. Demonstrate fundamental understanding of the evaluation of Artificial Intelligence (AI) and its foundations.
- 2. Apply basic principles of AI in solutions that require problem solving, perception, knowledge representation, and learning.
- 3. Design simple software to experiment with various AI concepts and analyse results
- 4. To show the importance of artificial intelligence and planning in solving real world problems
- 5. Demonstrate working knowledge of reasoning in the presence of incomplete and/or uncertain information also to show how the searching algorithms playing vital role in problem solving

4 hours

6. To create interactive and rational system using appropriate learning techniques also, to measure the level of user satisfaction and efficiency of the expert system and ANN

Module:1 INTRODUCTION

Philosophy of artificial intelligence, Definitions - Evolution of AI - Applications of AI, Classification of AI- Intelligent Agents: Agents and Environment-Nature of Environment-Structure Environment

Module:2	SEARCHING BASED PROBLEM	5 hours	
	SOLVING		
Problem S	olving Agent - Blind Search- Performance measures	- Informed Search	n: Introduction to
Heuristics-	Variants of heuristic search-uniform cost, A*,Gree	dy - Overview of	Hill Climbing –
Simulated	Annealing – Genetic Algorithms – Adversarial Searc	h - Minimax Aln	ha beta pruning

Module:3KNOWLEDGE REPRESENTATION AND5 hours

	REASONING		
Logical sys	tems - Knowledge Based systems, Propositional L	ogic – Constraints,	Predicate Logic
– First Orde	er Logic, Inference in First Order Logic, Ontologica	al Representations	and applications
Knowledge	representation and reasoning through logic		
Module:4	PLANNING	5 hours	
	oblem - Planning with State Space Search - Par		
Acting in th	e Real World: Conditional Planning – Re-planning	Agents, Robotics-A	Action
Module:5	UNCERTAINTY AND KNOWLEDGE	4 hours	

Overview – Definition of uncertainty, Utility Based System, -Bayes Rule – Inference, Belief Network, Markov decision processes, knowledge representation and reasoning through fuzzy logic and Bayesian networks

Module:6VI LEARNING SYSTEMS3 hoursMachine learning, Forms of Learning – Types - Supervised, unsupervised, reinforcement

Machine learning, Forms of Learning – Types - Supervised, unsupervised, reinforcemen learning, Learning Decision Trees, soft computing- Artificial Neural Network.

Module:7EXPERT SYSTEMS & ANN2 hours

Introduction to Expert Systems- Architecture, Reasoning, and explanation-Knowledge Acquisition-Introduction to Natural Language Processing-Morphological Analysis-Syntax Analysis-Semantic Analysis.

Module:8	CONTEMPORARY ISSUES: RECENT TRENDS & FUTURE OF AI	2 hou	irs	
	Total Lecture hours:	30 hours

Course code	MACHINE LEARNING TECH	NIQUES	L T P J C
CSE6024			2 0 2 0 3
Pre-requisite	Nil		Syllabus version
			V. XX.XX
Course Objectives		· · ·	
	al knowledge on setting hypothesis for pattern		daa fuana it
2. Apply suitable m	achine learning techniques for data handling an ormance of algorithms and to provide solution	d to gain knowle	age from it.
5. Evaluate the peri	ormance of algorithms and to provide solution	ior various rear-v	vonu applications.
Expected Course (Jutcomes:		
A	f the course, the students will be able to		
	aracteristics of machine learning strategies.		
	pervised learning methods to appropriate proble	ems.	
	grate more than one technique to enhance the pe		rning.
4. Create probabilis	tic and unsupervised learning models for handl	ing unknown patt	tern.
	ccurrence of data to find interesting frequent pa		
6. Preprocess the da	ta before applying to any real-world problem a	nd can evaluate it	ts performance.

CSE6034	BIG DATA ANALYTICS	L T P J C
Pre-requisite	Nil	Syllabus version
		V. XX.XX
Course Objective		
	the need of Big Data, challenges and different analytical archite	ectures
	understanding of Hadoop Architecture and its eco systems	
	ig Data with Advanced architectures like Spark. s and streaming data in Spark	
4. Describe graphs	s and streaming data in Spark	
Expected Course	Outcomes:	
<u> </u>	of the course, the students will be able to	
	llenges and their solutions in Big Data and work on Hadoop Fr	amework
	concepts of visualization through R programming.	
3. Explain and An	alyse the Big Data using Map-reduce programming in Both Ha	adoop and Spark
framework.		
	bark programming and graph algorithms using programming la	
•	plement different frame work tools by taking sample data sets.	
6. Ilustrate and im	plement the concepts by taking an application problem

CSE6099		0	0	0	0	16
Pre-requisite	As per the academic regulations	Sy	llab	us v	vers	ion
						1.0
Course Objectiv	/es:					
To provide suffic	cient hands-on learning experience related to the design,	, develo	opm	ent	and	
analysis of suitab	ble product / process so as to enhance the technical skill	sets in	the	cho	sen	
field and also to	give research orientation.					
Expected Cours						
	course the student will be able to					
-	cific problem statements for ill-defined real life problem	ns with	rea	sona	ıble	
	ind constraints.					
	ture search and / or patent search in the area of interest.					
-	riments / Design and Analysis / solution iterations and c	locume	nt tl	ne re	esul	ts.
	analysis / benchmarking / costing					
•	e results and arrive at scientific conclusions / products /	solutio	n			
	e results in the form of technical report / presentation					
Contents						
	ject may be a theoretical analysis, modeling & simulation	-				
	otype design, fabrication of new equipment, correlation		naly	S1S (of da	ata,
	lopment, applied research and any other related activitie					
	e for two semesters based on the completion of required	numbe	er of	cre	dits	as
-	nic regulations.					
3. Should be ind					, , .	
	side or outside the university, in any relevant industry o					on.
3. Publications 1 advantage	n the peer reviewed journals / International Conferences	s will d	e an	ado	ied	
auvallage

Course code	STATISTICAL NATURAL LANGUAGE PROCESSIN	NG	L	Τ	P J	С
CSE6060			3	0	0 0	3
Pre-requisite	Nil	• •	Syll	labı	ıs ve	rsion
					v.	XX.XX

Course Objectives:

- 1. To familiarize the concepts and techniques of Natural language Processing for analyzing words based on Morphology and CORPUS.
- 2. Torelate mathematical foundations, Probability theory with Linguistic essentials such as syntactic and semantic analysis of text.
- 3. To apply the Statistical learning methods and cutting-edge research models from deep learning.

Expected Course Outcome:

- 1. Apply the principles and Process of Human Languages such as English and other Indian Languages using computers.
- 2. Realize semantics and pragmatics of English language for text processing
- 3. Create CORPUS linguistics based on digestive approach (Text Corpus method)
- 4. Check a current methods for statistical approaches to machine translation.
- 5. Perform POS tagging for a given natural language and Select a suitable language modelling technique based on the structure of the language.
- 6. Demonstrate the state-of-the-art algorithms and techniques for text-based processing of natural language with respect to morphology.
- 7. Develop a Statistical Methods for Real World Applications and explore deep learning based NLP.

4hours

6 hours

6 hours

Module:1 Introduction to NLP

Introduction to NLP - Various stages of NLP – The Ambiguity of Language: Why NLP Is Difficult-Parts of Speech: Nouns and Pronouns, Words: Determiners and adjectives, verbs, Phrase Structure. Statistics Essential Information Theory : Entropy, perplexity, The relation to language, Cross entropy

Module:2 Text Preprocessing and Morphology

Character Encoding, Word Segmentation, Sentence Segmentation, Introduction to Corpora, Corpora Analysis. Inflectional and Derivation Morphology, Morphological analysis and generation using Finite State Automata and Finite State transducer.

Module:3 Language Modelling

Words: Collocations- Frequency-Mean and Variance –Hypothesis testing:The t test, Hypothesis testing of differences, Pearson's chi-square test, Likelihood ratios. Statistical Inference: n -gram Models over Sparse Data: Bins: Forming Equivalence Classes- N gram model - Statistical Estimators- Combining Estimators

Module:4	Word Sense Disambiguation	6hours			
Methodolog	Methodological Preliminaries, Supervised Disambiguation: Bayesian classification, An information-				
theoretic approach, Dictionary-Based Disambiguation: Disambiguation based on sense, Thesaurus-					
based disambiguation, Disambiguation based on translations in a second-language corpus.					
	<i></i>				

Module:5Markov Model and POS Tagging7hoursMarkov Model: Hidden Markov model, Fundamentals, Probability of properties, Parameter
estimation, Variants, Multiple input observation. The Information Sources in Tagging: Markov
model taggers, Viterbi algorithm, Applying HMMs to POS tagging, Applications of Tagging

Mo	odule:6	Probabilistic Context Free Grammars and Probabilistic parsing		7hour
dis	ambigua	bility of a String, Problems with the Inside- tion, Treebanks, Parsing models vs. language mod	els, Phrase str	ucture grammars and
deŗ	bendency	,Lexicalized models using derivational histories, De	ependency-base	ed models.

	opositional logic - Predicate logic - Syntax - Semantics -							
	faction and models – Pragmatics – Explicit and Implicit							
-	spressing Knowledge - Basic and Complex Facts – Termi	-						
	act Individuals - Other Sorts of Facts – Resolution – The Prop							
-	Handling Variables and Quantifiers –First Order Resolutio emization – Clause Form – Equality - Dealing with Con							
	e First-Order Case - Herbrand Theorem - The Propositional	-						
-	Γ Solvers - Most General Unifiers - Other Refinements	r Case - The						
implications of t	Solvers most Seneral entities other Remientents							
Module:3 Know	vledge Representation – Using Rules 6 hou	rs CO: 2,3						
	Declarative Knowledge - Logic Programming - Forward ver	sus Backward						
Reasoning – Rule Matching – Rules in Production Systems- Working Memory- Conflict								
Resolution- Rete's Algorithm – Discriminant Networks - Control Knowledge – Reasoning with								
Horn Clauses – Computing Selective Linear Definite clause resolution Derivatives – Rule								
Formation and Search Strategy – Algorithm Design – Specifying Goal order – Committing to								
	ontrolling Back Tracking – Negation as Failure – Dynamic I							

Module:4Object Oriented Representation using Logic6hoursCO: 5

Object oriented Representation – Objects and Frames – Frame Formalism –Object Driven Programming with Frames – Generic and Individual Frames – Inheritance – Reasoning with Frames – Structured Descriptions – Description Language – Meaning and Entailment – Interpretations – Truth in an Interpretation –Computing Entailments – Simplifying the Knowledge base – Normalization – Structure Matching – Subsumption Computation – Taxonomies and Classification –Inheritance Networks – Handling Defeasible Inheritance – Inheritance Networks

Module:5	Uncertainty and Higher Order Logics	6hours	CO:2,4			
Vagueness- Uncertainty - Degrees of Belief- Defaults - Default Reasoning - Closed World						
Assumption	Assumption – Situation Logic - Non Monotonic Logic- Truth Maintenance Systems - Fuzzy					
Logic – Infe	Logic – Inference using Fuzzy Rules – Modal Logic – Temporal Logic – Temporal reasoning –					
Temporal Constraint networks – Epistemic Logic- Statistical Reasoning – Bayesian Networks –						
Plausibility'	Theory - Reasoning and Decision Making under Uncertai	nty				

Module:6Expert Systems and Learning6hoursCO:6Expert Systems – Shells for Expert Systems – Inference Engine – Forward and Backward
Chaining Inference – MYCIN - DENDRAL –Knowledge Acquisition - Rote Learning –
Learning from Examples – Machine Learning- Neural Networks – Regression Analysis-
Predictive Models - Deep Learning

Module 7: Applications of Knowledge Base Systems6hoursCO:6Factory Automation -Field and Service Robotics-AssistiveRobotics -Military Applications -
Medicare-Education - Business Intelligence - Recommendation Systems - Social Network
Analysis - Natural Language Processing - Information Retrieval SystemsWeight of the second systems

Module:8	Contemporary issues:		3hours	CO:1, 6
		Total Lecture hours:	45 hours

Course code	REINFORCEMENT LEARNING	L T P J C
CSE6066		3 0 0 0 3
Pre-requisite		Syllabus version
		v.1

Course Objectives:

1. Learn how to define RL tasks and the core principals behind the RL, including policies, value functions.

2. Understand and work with tabular methods to solve classical control problems.

3. Recognize current, advanced techniques and applications in RL.

Expected Course Outcome:

1. Implement in-code common algorithms following code standards and libraries used in RL.

- 2. Understand and work with approximate solutions.
- 3. Explore imitation learning tasks and solutions.

4. Learn how to define RL tasks and the core principals behind the RL, including policies, value functions.

5. Understand and work with tabular methods to solve classical control problems.

6. Recognize current advanced techniques and applications using RL.

Module:1	Reinforcement Learning Primitives	7 hours	CO: 1, 2

Introduction and Basics of RL, Defining RL Framework, Probability Basics: Probability Axioms, Random Variables, Probability Mass Function, Probability Density Function, Cumulative Distribution Function and Expectation. Introduction to Agents, Intelligent Agents – Problem Solving – Searching, Logical Agents.

Module:2	Markov Decisi Programming	on Process	7 hours	(CO: 2, 3	
Markov Prop	Markov Property, Markov Chains, Markov Reward Process (MRP), Bellman Equations for MRP,					
Dynamic	Programming:	Polices	(Evaluation,	Improvement,	Iteration,	Value
Iteration), Asynchronous Dynamic Programming, Generalized Policy Iteration, Efficiency of						

Dynamic Programming.

Module:3	Monte Carlo Methods and Temporal	7 hours	CO: 3, 4
	Difference Learning		

Monte Carlo: Prediction, Estimation of Action Values, Control and Control without Exploring Starts, Off-Policy Control, Temporal Difference Prediction:TD(0), SARSA: On-Policy TD control, Q-Learning: Off-Policy TD control, Games, Afterstates, and Other Special Cases.

Module:4	Deep Reinforcement Learning	7 hours	CO: 4, 5
----------	-----------------------------	---------	----------

Deep Q-Networks, Double Deep-Q Networks(DQN, DDQN, Dueling DQN, Prioritized Experience Replay).

Module:5	Policy Optimization in RL	7 hours	CO: 6		
	Introduction to Policy-based Methods, Vanilla Policy Gradient, REINFORCE Algorithm and				
Stochastic P	Stochastic Policy Search, Asynchronous Actor-Critic and Asynchronous Advantage Actor-Critic				
(A2C, A3C)	(A2C, A3C), Advanced Policy Gradient (PPO, TRPO, DDPG).				

Module:6	Multi Agent in RL	7 hours	CO: 5, 6			
Multi-Agent	Multi-Agent Learning, Meta-learning, Partially Observable Markov Decision Process, Ethics in					
RL, Applyin	g RL for Real-World Problems					

Module:7	Recent Trends		3 h	ours	CO: 6
		Total Lecture ho	ours: 45	hours	
Text Book(s)
