

## **School of Computer Science and Engineering**

# CURRICULUM AND SYLLABI

# (2023-2024)

M.Tech (CSE) – (Data Science) – 5 year Integrated

## **School of Computer Science and Engineering**

M.Tech (CSE) – (Data Science) - 5 Year Integrated

**CURRICULUM AND SYLLABUS** 

(2023-2024 Admitted Students)

#### VISION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

Transforming life through excellence in education and research.

# MISSION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

**World class Education**: Excellence in education, grounded in ethics and critical thinking, for improvement of life.

**Cutting edge Research**: An innovation ecosystem to extend knowledge and solve critical problems.

**Impactful People**: Happy, accountable, caring and effective workforce and students.

**Rewarding Co-creations**: Active collaboration with national & international industries & universities for productivity and economic development.

Service to Society: Service to the region and world through knowledge and compassion.

# VISION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

To be a world-renowned centre of education, research and service in computing and allied domains.

# MISSION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

- To offer computing education programs with the goal that the students become technically competent and develop lifelong learning skill.
- To undertake path-breaking research that creates new computing technologies and solutions for industry and society at large.
- To foster vibrant outreach programs for industry, research organizations, academia and society.

## School of Computer Science and Engineering M.Tech (CSE) – (Data Science) – 5 year Integrated

### **PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)**

1. Graduate will acquire fundamental knowledge and expertise essential for professional practice in computer engineering.

2. Graduates will use suitable principle, hypothesis, mathematics and computational technology to analyze and solve problems encountered in the applications of computer systems.

3. Graduates will own a professional attitude as an individual or a team member with contemplation for society, professional ethics, environmental factors and motivation for lifelong learning.

4. Graduates will communicate, using oral, written and computer based communication technology, as well as function effectively as an individual and a team member in professional environment.

5. Graduates will realise the local, national and global issues related to the growth and applications of computer systems and to be solicitous of the impact of these issues on different cultures.

### M. Tech Computer Science and Engineering (Data Science) 5-Year Integrated

### **PROGRAMME OUTCOMES (POs)**

PO\_1 Having an ability to apply mathematics and science in engineering applications

PO\_2 Having a clear understanding of the subject related concepts and of contemporary issues

PO\_3 Having an ability to design a component or a product applying all the relevant standards and with realistic constraints

PO\_4 Having an ability to design and conduct experiments, as well as to analyze and interpret data

PO\_5 Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice

PO\_6 Having problem solving ability-solving social issues and engineering problems

PO\_7 Having adaptive thinking and adaptability

PO\_8 Having a clear understanding of professional and ethical responsibility

PO\_9 Having cross cultural competency exhibited by working in teams

PO\_10 Having a good working knowledge of communicating in English

PO\_11 Having a good cognitive load management [discriminate and filter the available data] skills

PO\_12 Having interest in lifelong learning

## School of Computer Science and Engineering M.Tech (CSE) – (Data Science) – 5 year Integrated

### **PROGRAMME SPECIFIC OUTCOMES (PSOs)**

1. Employ mathematical models with indispensable engineering and scientific principles to unravel solutions for life problems using appropriate data structures and algorithms.

2. Design storage structures to represent huge data and apply artificial statistics and computational analysis for data to predict and represent knowledge.

3. Evaluate the use of data from acquisition through cleansing, warehousing, analytics, and visualization to the ultimate business decision.

4. Utilize the core concepts of computer science and engage in research methods to interpret, process, experiment and conclude the investigations.

	le of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar	
Lis	of Experiments	
1.	Study of Linux commands – System Information, Files and	3 hours
	Directories, Process, Text Processing and Scripting, Programming.	
2.	Shell scripting (I/O, decision making, looping)	3 hours
3.	Creating Child process (using fork), Zombie, Orphan. Displaying	3 hours
	system information using C.	
4.	CPU Scheduling Algorithms (FCFS, SJF, RR, Priority)	3 hours
5.	Deadlock Avoidance Algorithm (Bankers algorithm)	3 hours
6.	IPC (Threads, Pipes)	3 hours
7.	Process synchronization (Producer Consumer / Reader Writer/Dining	3 hours
	Philosopher using semaphores)	
8.	Dynamic Memory Allocation Algorithms (First fit, Best fit, Worst fit)	3 hours
9.	Page Replacement Algorithms. (FIFO, LRU, Optimal)	3 hours
10.	Disk Scheduling Algorithms.	3 hours
	Total Laboratory Hours	30 hours
	le of evaluation:

CSI1003	Formal Languages and Automata Theory	L	T	Р	J	С
		3	0	0	0	3
Pre-requisite		Sylla	ibus	ver	sio	n
			1.	0		
<b>Course Objectiv</b>	es:					
	his course is to learn					
,	nars and models of automata.					
· · · ·	omputation: What can be and what cannot be computed.					
	nnections among grammars, automata and formal language	s and	real	ize t	he	
0	ots and techniques involved in the software system develop					
Expected Cours						
-	completing the course the student should be able to					
•	e and analyse different computational models					
-	ly formal mathematical methods to prove properties of lang	nages	s. gra	ımm	nars	
and automata.	,		, 8			
	ons of some computational models and possible methods of	of pro	ving	the	m.	
	tract concepts mathematically with notations	- p- 0	·6	,		
	oduction to Languages and Grammars		4 ho	urs		
	echniques in Mathematics - Overview of a Computational M				11206	S
	Alphabets - Strings - Operations on Languages, Overview o					
	e State Automata		8 ho			
	(FA) - Deterministic Finite Automata (DFA) - Non-				Fir	nite
	- NFA with epsilon transitions – NFA without epsilon tr					
						ion
of NEA to DEA		ansu	011, 1	COIN	veis.	ion
	Equivalence of NFA and DFA – minimization of DFA				1015	ion

CSI1004	Computer Organization And Architecture		L	T	P	J	С
			3	0	0	0	3
Pre-requisite		S	Sylla	bus	vei	sio	n
				1.	.0		

#### **Course Objectives:**

1. To familiarize students with the fundamental components, architecture, register organization and performance metrics of a computer.

2. To make students capable for understanding and analyzing the effects of each instruction execution and the data path in those instruction execution.

3. To impart the knowledge of data representation in binary and understand implementation of arithmetic algorithms in a typical computer.

4. To make students understand the importance of memory systems, IO interfacing techniques and external storage and their performance metrics for a typical computer.

#### **Expected Course Outcome:**

1. Understand the general architecture of a computer system and the instruction based architecture.

2. Illustrate various binary data representations for fixed and floating point data. Validate efficient algorithm for arithmetic operations.

3. Explain the importance of hierarchical memory organization. Able to construct larger memories. Analyze and suggest efficient cache mapping technique and replacement algorithms for given design requirements. Get the idea about different external storage devices.

4. Understand the need for an interface. Compare and contrast memory mapping and IO mapping techniques. Describe and Differentiate different modes of data transfer. Appraise the synchronous and asynchronous bus for performance and arbitration.

5. Understand some system performance enhancement techniques such as pipeline concepts, parallel execution, etc. Introduction to some of the advanced architectures.

Module:1	Introduction to computer architecture	4 hours				
Introductio	n to computer systems - Overview of Organization and Archite	ecture – Components,				
Registers ar	d register files, Connections - Von Neumann machine (IAS M	lachine) – Architecture				
– Commun	cation between components					
Module:2	Instruction Set Architecture	6 hours				
Introductio	n to ISA (Instruction Set Architecture): Instruction formats	- Instruction types -				
Addressing	modes - Instruction cycle - Introduction to Assembly Languag	ge Programming.				
Module:3	Data Representation And Computer Arithmetic	9 hours				
Data Repre	sentation - Introduction to Fixed point representation of nur	mbers - Floating point				
representati	on of numbers (IEEE standard representation) - Algori	thms for fixed point				
arithmetic	operations: Addition, Subtraction, Multiplication (Booth's A	Algorithm), Division -				
Representat	ion of non-numeric data (character codes).					
Module:4	Memory System Organization & Architecture	10 hours				
Memory sys	tems hierarchy - Main memory organization - Byte ordering -	Memory interleaving -				
Memory ch	aracteristics - Cache memories: Introduction - Parameters	of Cache memory -				
	Address mapping – Read and write policies - Cache Coherence - Virtual memory systems - TLB					
Address ma - Page repla	pping – Read and write policies - Cache Coherence - Virtual r cement Algorithms.					
Address ma - Page repla Module:5	pping – Read and write policies - Cache Coherence - Virtual r cement Algorithms. Interfacing and Communication I/O fundamentals	nemory systems - TLB 7 hours				
Address ma - Page repla Module:5 I/O funda	pping – Read and write policies - Cache Coherence - Virtual r cement Algorithms. Interfacing and Communication I/O fundamentals mentals: I/O Modules, I/O mapped I/O and Memory Mappe	nemory systems - TLB 7 hours d I/O - Introduction				
Address ma - Page repla Module:5 I/O funda to I/O tec	pping – Read and write policies - Cache Coherence - Virtual r cement Algorithms. Interfacing and Communication I/O fundamentals mentals: I/O Modules, I/O mapped I/O and Memory Mappe hniques: Programmed I/O, Interrupt-driven I/O, DMA - Inte	nemory systems - TLB 7 hours d I/O - Introduction rrupt structures:				
Address ma - Page repla Module:5 I/O funda to I/O tec	pping – Read and write policies - Cache Coherence - Virtual r cement Algorithms. Interfacing and Communication I/O fundamentals mentals: I/O Modules, I/O mapped I/O and Memory Mappe	nemory systems - TLB 7 hours d I/O - Introduction rrupt structures:

Verification and Validation: Validation Testing, Validation Test Criteria; Documentation; Test Strategies: Top-Down Testing, Bottom-Up Testing, Th testing, Back-to-back testing; Testing methods and tools: Testing through testing (Functional testing), White box testing (glass-box testing), Testing Additional requirements in testing OO Systems; Metrics Collection, O Evaluation; Test and QA plan; Managing Testing Functions.	reviews, Black-box software changes;
Module:6 Software Maintenance	3 hours
Software Maintenance, Types of Maintenance, Structured versus unstructure	red maintenance –
Maintenance costs - Typical problems with maintenance and its side-effe	cts – Maintenance
process - Software Configuration Management - Component Reusability -	Overview of RE-
engineering & Reverse Engineering- Business Process Reengineering- Restr	ructuring- Forward
Engineering- Economics of Reengineering.	
Module:7 Project Planning and Risk Management	2 hours
Objectives of Activity planning - Project schedules - Activities - Sequencing	0
Network Planning models - Forward Pass & Backward Pass techniques - C	1 ( /
method - Risk identification - Assessment - Monitoring - PERT techniq	
simulation - Resource Allocation - Creation of critical patterns - Cost schedu	
Module:8 Recent Trends	2 hours
Total Hours	30 Hrs
Lab Experiments	
1. Work Break-down Structure (Process Based, Product Based, Geographic	30 Hrs
Based and Role Based)	
2. Estimations – Cost & Schedule	
3. Entity Relationship Diagram, Context flow diagram, DFD (Structural	
Modeling and Functional Modeling)	
4. State Transition Diagrams (Behavioral Modeling)	
5. System Requirements Specification	
6. UML diagrams for OO Design	
7. Tools for Version Control	
8. Black-box, White-box testing Non-functional testing	
Text Book(s)

CSI2001	DIGITAL LOGIC AND COMPUTE	ER DESIGN		Τ	P J	С
			3	0	2 0	4
Pre-requisite	Nil		Syl		s vers	ion
				1	.0	
Course Objectives:						
	its with the basic concepts of digital and bina		1 1	ı		
2	ign combinational and sequential logic circui		11			
3. To apply the theor	etical concepts in designing the circuits using	appropriate	tools an	id ha	rdware	s.
Europeted Courses O						
Expected Course O	the course, the students will be able to					
1 1	epresent the different types of number system	n				
	e the logic functions using Boolean Algebra a					
	mbinational logic circuits.	ina ix-inap.				
0	tion of medium complexity standard comb	inational cir	cuits like	e the	enco	ler
decoder, multiplexer,		on				
	n the Basic Sequential Logic Circuits					
	action of Basic Arithmetic and Logic Circuits					
	inking capability, ability to design a compo		ealistic	cons	traints,	to
solve real world engin	neering problems and analyze the results.					
Student Learning C	Outcomes (SLO): 2,5,14					
M 1 1 4 T					2.1	
	roduction to Digital Logic		IT	1 4	3 ho	urs

Mode of Evalu	uation: CAT / Assignment / Quiz / FAT / Project / Seminar
List of Indica	ative Experiments
	Realization of Logic gates using discrete components, verification of truth table for ogic gates, realization of basic gates using NAND and NOR gates
	Implementation of Logic Circuits by verification of Boolean laws and verification of De Morgans.
	Adder and Subtractor circuit realization by implementation of Half-Adder and Full-Adder, and by implementation of Half-Subtractor and Full-Subtractor.
1. 	<ul><li>i. Design of Multiplexer and De multiplexer</li><li>ii. Design of Magnitude Comparator</li></ul>
	v. Design of Code Converter Sequential circuit design
	<ul><li>i. Design of Mealy and Moore circuit</li><li>ii. Implementation of Shift registers</li></ul>
	iii. Design of 4-bit Counter
	iv. Design of Ring Counter.
6. I le F s le	Implementation of different circuits to solve real world problems: A digitally controlled ocker works based on a control switch and two keys which are entered by the user. Each key has a 2-bit binary representation. If the control switch is pressed, the locking system will pass the difference of two keys into the controller unit. Otherwise, the ocking system will pass the sum of the two numbers to the controller unit. Design a circuit to determine the input to the controller unit.
s c a c c c r	Implementation of different circuits to solve real world problems: A bank queuing system has a capacity of 5 customers which serves on first come first served basis. A display unit is used to display the number of customers waiting in the queue. Whenever a customer leaves the queue, the count is reduced by one and the count is increased by one if a customer joins a queue. Two sensors (control signals) are used to sense customers leaving and joining the queue respectively. Design a circuit that displays the number of customers waiting in the queue in binary format using LEDs. Binary 1 is represented by LED glow and 0 otherwise.

1.0						

#### **Course Objectives:**

1. Build an understanding of the fundamental concepts of computer networking, protocols, architectures, and applications

2. Gain expertise in design, implement and analyze performance perspective of TCP/IP layered Architecture

3. Deal with the major issues of the layers of the model.

#### **Course Outcomes:**

1. Describe the layered structure of a typical networked architecture

2. Identify and analyze the different types of network topologies, error and flow control mechanisms

3. Design sub-netting and enhance the performance of routing mechanisms.

4. Compare various congestion control mechanisms and identify suitable Transport layer protocol for real time applications

5. Identify various Application layer protocols for specific applications

6. Design and Implement various Network protocols

## Student Learning Outcomes (SLO): 2,5,6

Module:1   Basics of Data Communication and Computer Network	5 hours		
Definition and Uses of Computer Network, Criteria for a Data Communicati	on Network,		
Components of Data Communication, Classification of Computer network, Netwo	ork Topology,		
Network Models: OSI, TCP/IP- Networking Devices: Hubs, Bridges, Switches,	Routers, and		
Gateways - Performance Metrics - Introduction to Sockets - Port number	rs in Socket		
Programming			
Module:2 Physical Layer	5 hours		
Transmission Impairments, Transmission Medium, Data Encoding: Line Encoding	ng, Types of		
Line Coding, Analog-to-Digital Conversion- Pulse code modulation (PCM), Delt	a modulation		
(DM);Transmission Modes- Half and Full Duplex- Signals - Bandwidth and	Data Rate –		
Multiplexing – Shift Keying			
Module:3 Data Link Layer	9 hours		
Error Detection and Correction- One and two dimensional parity checks, Hamming	g code, Cyclic		
redundancy check (CRC); Flow Control: Protocols: Protocols for Noiseless Channel	els and Noisy		
Channels – Ethernet- Access Control Protocols: CSMA,CSMA/CA,CSMA/CD,	Token Ring-		
Token Passing, TDMA, FDMA, CDMA-Virtual LAN- Wireless LAN (802.11).			
Module:4 Network Layer	8 hours		
IP Addressing Scheme, Subnet Addressing, Subnet Masks, IPV4 Addressing, IPV6	6 Addressing,		
Address Resolution Protocol (ARP), Reverse Address Resolution Protocol (R	ARP).Unicast		
Routing: Routing Characteristics, Routing Algorithms: Distance Vector Routing P	rotocol, Link		
State Routing Protocol – Multicast Routing- Wireless Routing			
Module:5 Transport Layer	6 hours		
Services of Transport Layer, Socket Programming, TCP Phases, Transport Layer Protocols:			
TCP, UDP, SCTP, RTP, Transport Layer Security Protocols : SSL,TLS			
Module:6 Traffic Engineering Principles	4 hours		

Congestion Control Algorithms- Congestion prevention policies; Quality of Service- Traffic shaping, Leaky bucket algorithm, Token bucket algorithm; Integrated Services.

Mo	odule:7 Application Layer	6 hours
	ple Mail Transfer Protocol (SMTP), File Transfer Protocol (FTP), TELN	NET,SNMP,DNS,
Hy	pertext Transfer Protocol (HTTP), World Wide Web (WWW), Security in	n Internet, E-mail
Sec	urity.

	integration for compliance using the case study of Cisco.	
6	Explore the Snort Intrusion Detection Systems. Study Snort IDS, a	4 Hours
	signature-based intrusion detection system used to detect network	
	attacks. Snort can also be used as a simple packet logger. For the purpose	
	of this lab the students will use snort as a packet sniffer and write their	
	own IDS rules	
7	Explore ways to perform wireless attacks and understand potential	4 Hours
	defences. The attacks that will be covered are inspecting & modifying	
	wireless card parameters, changing the wireless transmission channel,	
0	flooding attacks, and cracking keys of WPA2 protected networks.	4 11
8	Pretty Good Privacy –	4 Hours
	• Create a public/private key pair in PGP	
	• Create a revocation ley	
	• Exchange PGP keys with other students	
	• Signing the new key	
	• Encrypting a file using your partner's public key	
	• Decrypting the file using your private key	
	<ul> <li>Encrypting and signing a file</li> </ul>	
	• Verifying the signature	
	Sending secure Email with PGP	
	• Adding a public key and sending secure email.	
9	Send and receive an encrypted email message using S/MIME.	3 Hours
	Total Lecture hours:	30 hours

Course Objec	tives:				
	nd the various types of data, apply and evaluate the principles of	of da	ata		
visualization					
2. Acquire skill	ls to apply visualization techniques to a problem and its ass	ociat	ed		
dataset					
3. To apply stru	ctured approach to create effective visualizations				
4. To learn how	to bring valuable insight from the massive dataset using visualiz	ation	ı		
5. To learn how	to build visualization dashboard to support decision making				
6.To create inte	ractive visualization for better insight using various visualization	tools	5		
Course Outco	ome:				
After successfu	lly completing the course the student should be able to				
1. Identify the	different data types, visualization types to bring out the insight.				
2. Relate the vi	sualization towards the problem based on the dataset to analyze	and	brin	ig oi	ıt
valuable insight	on large dataset.				
3. Design visua	lization dashboard to support the decision making on large scale	data	ι.		
4. Demonstrate	e the analysis of large dataset using various visualization techniqu	les ar	nd to	ools.	
Student Learn	ning Outcomes (SLO): 4, 7, 12				
Module:1	Introduction to Data Visualization and Visualization		(	6 ho	urs
	techniques				
Overview of d	lata visualization - Data Abstraction - Task Abstraction - Anal	ysis:	Fou	ır L	evels
	. Visualization Techniques -Scalar and point techniques -				
Contouring -	Height Plots - Vector visualization techniques - Vector pro-	opert	ies -	- Ve	ector
Glyphs – Vect	or Color Coding				
Module:2	Visual Analytics			5 ho	urs

Course Objecti	ves:		1	•0			
	imple problem of DC and AC circuits.						
	mportant concepts of Analog and digital electronics						
3] To measure an							
Expected Cours	*						
	on of this course the student will be able to:						
	DC circuits using mesh and nodal analysis.						
	RLC components with sinusoidal sources.						
-	binational circuits and synthesis of logic circuits						
	ic concepts of semiconductor devices and circuits						
	rchitecture of microprocessor & microcontrollers						
	arious signals using the sensors						
7] Discuss the ov	verview of communication systems.						
8] Design and Co	onduct experiments, as well as analyze and interpret	data					
Module:1 Fur	damentals of DC circuits:		5 h	ours	6		
	nents and sources, Ohms law, Kirchhoff's laws, N		volta	ge a	naly	sis,	
Mesh current and	alysis, Thevenin's and Maximum power transfer the	orem.					
	damentals of AC Circuits:			ours			
Introduction to A	AC circuits, Steady state AC analysis of a RL, RC, R	LC Se	ries o	ircu	its,	AC	
power calculation	ns.						
Module:3 Dig	ital Systems:		4 h	ours	3		
•	Boolean algebra, Logic circuit concepts, Multiplexe				er, H	Ialf	
adder, Full adder	, Computer organization, Memory types, Flip Flops	, Cour	nters.				
	niconductor devices:			ours			
	emiconductor materials, principle of operation, V-I		cteri	stics	of	PN	
	Zener diode, BJT, half wave rectifier, full wave rectif	ier.					
	roprocessor & microcontroller:			ours			
	M architecture, Different modes of ARM processor	r, vario	ous in	istru	ictic	ons,	
	oller architecture, Applications.						
	asuring Instruments and Sensors:			ours			
	truments: Classification of instruments, Working	princ	iple	of F	PMN	4C,	
	hart Meters, Ammeter, Voltmeter & wattmeter.						
	lucers classification & selections, Resistive, Indu	active	and	cap	Dacit	ive	
	and Digital sensors						
	nmunication systems			ours			
	Demodulation – Amplitude, frequency, digital m	nodula	tion,	wir	ed a	and	
	nication – concept and types			ours			
Module:8 Lec	Module:8 Lecture by industry experts.						
	Total Lecture hours:		<b>30</b> h	our	s		
	ging Experiments (Indicative)						
Software Exper							
1. Analysis a analysis	nd verification of circuit using Mesh and Nodal		2 h	ours	5		
	on of network theorems using Maximum power		2 h	ours	,		

	transfer				
3.	Analysis of Single AC circuit with R, RI	Land RC load	s		2 hours
4	Design of half adder and full adder		.5		2 hours
5.	Single phase half wave				2 hours
6.	Full wave rectifier				2 hours
7.	Design of controlled switch using BJT				2 hours
	ware Experiments				2 110013
1.	Verification of network theorems using	Thevenin's			2 hours
2.	Regulated power supply using Zener di				2 hours
3.	Design of a lamp dimmer circuit using		ir		2 hours
4	Design and verification of logic circuit	0 1			2 hours
	Boolean expression	by simplifying	uite		2 110 415
5.	Calibration of voltmeter and Ammeter				2 hours
6.	Wiring connection for Fan				2 hours
7.	Staircase wiring layout for multi-storied	l building			2 hours
8.	Study on Microprocessor kit	i o ununig			2 hours
		l Laboratory	Hours	30 hoi

Semigroups and Properties-Group Module:4 Latt Partially Ordered	Monoids - Groups – Subgroups – Lagrange's Theorem o Codes. ices			norj	ohis 5 hc	ours m – ours

Module:6 Fundamentals of Graphs	Module:6	Fundamentals of Graphs
---------------------------------	----------	------------------------

Basic Concepts of Graph Theory – Planar and Complete graph - Matrix representation of Graphs – Graph Isomorphism – Connectivity–Cut sets-Euler and Hamilton Paths–Shortest Path algorithms.

6 hours

Module:7	Trees, Fundamental circuits , Cut sets,	12 hours
	Graph colouring, covering, Partitioning	

Trees – properties of trees – distance and centres in tree –Spanning trees – Spanning tree algorithms- Tree traversals- Fundamental circuits and cut-sets. Bipartite graphs - Chromatic number – Chromatic partitioning – Chromatic polynomial - matching – Covering– Four Colour problem.

Module:8	Contemporary Issues	2 hours

Industry Expert Lecture

	Total Lecture hours:	45 hours				
Tutorial						
	worked out by students in every					
	Tutorial class.					
	Another 5 problems per Tutorial Class					
	to be given as home work.					
	Mode: Individual Exercises, Team Exercises,					
	Online Quizzes, Online, Discussion Forums

Course Objectiv								
	the basics of Machine Learning Concepts							
	e to apply ML concepts in computing by making a choice of t	the	suita	ble	ML			
technique								
1	ce tuning ML Models and address data inadequacies							
4. To be able to understand and enhance various classification models								
	e to apply simple techniques like regression for powerful appl							
0	n insight into parameters of supervised learning models like C			~				
	stand the working of Neural Networks and the components in	nvo	lved					
Course Outcom								
	nding the nuances of an ML sequence							
	understanding of a Model's deficiency mowledge of mathematical concepts involved in Gradient De		at					
0	e the difference between Supervised and Unsupervised learning			مام				
	apply accuracy metrics for various models	ing i	nou	C15				
	sight into Reinforced Learning approaches for Problem Solvin	no						
	e to understand Deep Networks and their potential in differer		elds					
<u>v</u>	g Outcomes (SLO): 1, 5, 14	10 11	ciuo					
	oduction to Machine Learning			6	ho	urs		
	g – Types; Data – Getting the data, visualizing the data, p	ren	arin					
	ining a Model – Fine tuning a Model: Grid Search – Random							
Challenges: Data	Inadequacy - Non-representativeness - Irrelevant features	_ (	Ove	rfitti	ng	the		
Model – Underfit					0			
Module:2 Supe	ervised Learning Techniques				ho			
Binary Classifier	- Performance Measures : Cross -Validation - Confusion	Ma	trix	–Pr	ecis	ion		
and Recall - Mu	lticlass classification - Mutli-label classification; Linear Regr	essi	on	- G	radi	ent		
Descent: Batch	Gradient - Stochastic Gradient Descent - Mini-batch (	Gra	dien	t D	esce	ent;		
Polynomial Regr	ession -Logistic Regression -Estimating Probabilities, Dec	cisic	on I	Bour	ıdar	ies,		
Softmax Regressi								
Module:3 Supp	port Vector Machines			7	ho	urs		
Linear SVM wit	h Soft Margin Classification – Non-linear SVM Classific	atic	n:	Poly	non	nial		
	ty features –Gaussian Kernel; SVM Regression							
Module:4 Neu	iral Networks			6	ho	urs		
Introduction to a	1 Simple Neural Network - Computations - Output Layer	of	a Bi	nary	an	d a		
Multiclass proble:	m, Choosing the right configuration, Loss Functions, Back Pr	opa	igati	on				
Module:5 Dec	ision Trees and Random Forests			7	ho	urs		
Training and Visi	alizing a Decision Tree -CART Algorithm - Gini Impurity;	Baş	ggin	g – İ	Past	ing		
- Random Forest	s – Boosting: Adaboost and Gradient Boosting –Stacking							
Module:6 Dim	nensionality Reduction			4	ho	urs		
	- Projection and Manifold Learning - PCA (Principal Con							
0	Variance - Principal Components - Projecting down to	d	Din	nens	ions			
Randomized PCA								
	upervised Learning Techniques				ho			
Clustering –Kme	ans - Limitations - Clustering for Image Segmentation, Prep	roc	essir	ng,	Sem	1-		
0				0,				
0	ng – DBSCAN – Hierarchical – Paritional - Gaussian Mixture	S		0,

CSI3007	Advanced Python Programming	LTPJC
Pre-requisite	CSE1001	Syllabus version
		1.0
Course Objectives:		
	apply advanced python programming concepts for in-	dustry standard
problems.		1.5.6
1	advanced Data Preprocessing tasks like Data Merging a	and Mugging
	o develop powerful Web-Apps using Python	
Course Outcome:		
	e nuances of Data Structures	
	lerstanding of a classes and objects and their potential	
3. Gain knowled	ge of multithreading concepts and implementing the sa	ame
4. Appreciate the	e difference between different data processing techniqu	ies
5. Learn to apply	Python features for Data Science	
6. Get an insight	into Metrics Analysis	
7. Develop web-	apps and build models for IoT	
Student Learning O		
Ŭ	Structures	4 Hours
Problem solving usi	ing Python Data Structures : LIST, DICT, TUPLES	
	amda Functions and Parallel processing – MAPS – F	
Generators	annea i anedono ana i araner processing initio i	intering interiosits
	es and Objects	4 Hours
	ed Data Type ,Objects as Instances of Classes, Creating	
	jects By Passing Values, Variables & Methods in a Class	
, , ,		
	ling, Encapsulation, Modularity, Inheritance, Polymorp	
	threading in Python	4 Hours
	g and Multiprocessing Multithreading and multiprocess	8

CSI3009	Advanced Wireless Networks	L	T	P	T	С			
		3	0		0	4			
Pre-requisite		Svll	abu	s vei	rsic	on			
		2		0.1					
Course Objectives:									
1. To study about advanced wireless network, LTE, 4G and Evolutions from LTE to LTEA.									
2. To stu archited	dy about wireless IP architecture, Packet Data Protocol a	ind 1	LTE	net	wo	ork			
	y about wireless protocols, Mobility Management and Wireless	Secu	rity.						
Course Outco	me:								
1. Learn t	he latest 4G networks and LTE								
2. Unders	tand about the wireless standards and design.								
3. Unders	tand about the wireless network architecture and its concepts.								
4. Learn v	vireless Technologies and protocols								
5. Unders	tand about the mobility management and cellular network.								
6. Learn t	he security concepts of wireless networks and also the recent tru	ends.							
Student Learn	ing Outcomes (SLO): 2, 5 6								
Module:1 In				7 h					
Introduction to	1G/2G/3G/4G Terminology. Evolution of Public Mobile Se	ervice	es -N	Iotiv	ati	on			
for IP Based W	Vireless Networks -Requirements and Targets for Long Term	Evol	utio	n (Ľ	ГE	) -			
	or LTE- 4G Advanced Features and Roadmap Evolutions from	n LTI	E to	LTE	А				
Module:2 Sta	andards and Design			5 h	iou	irs			
	ns and standards. Wireless LANs: Wireless LAN technology. W	ireles	s sta	ındar	d				
· · ·	etc.) and Other IEEE 802.11 Standards								
	ireless Architectures			7 h					
	Data Networks - Network Architecture - Packet Data Protoco								
0 0	DP Addresses on Mobile Stations - Accessing IP Networks three	ough	PS I	Dom	ain	ı —			
	Architecture - Roaming Architecture- Protocol Architecture								
	Vireless technologies			7 h					
	ss networks and systems principles. Antennas and radio p								
0	modulation techniques., advanced modulation and coding	<i>.</i>							
1 / 0	nitive radio and dynamic spectrum access networks, Static an	d dyı	nam	ic ch	anr	nel			
allocation techn	1		<u> </u>						
	ireless Protocols			<u>6 h</u>	iou	irs			
	s, The Mediation Device Protocol, Contention based protocols								
	protocols – LEACH, IEEE 802.15.4 MAC protocol, Challeng								
	protocol. Routing protocols- data centric routing protocols, hi	erarc	hıca	l rou	tınş	3			
-	ion based routing, energy efficient routing.								
	obility Management	<u>/</u> ۲۰			nou				
	orks-Cellular Systems with Prioritized Handoff-Cell Residing ction in Pico- and Micro-Cellular Networks	Time	e Di	strib	uti	on

Course Objectiv	7es:				
1. To introd	uce the essential software engineering concepts involved				
2. To impar	t skills in the design and implementation of efficient software	systen	ns acr	oss	
discipline	s				
3. To famili	arize engineering practices and standards used in developing s	oftwa	e pro	duc	ts
and comp	ponents				
Course Outcom					
1. Apply the	e principles of the engineering processes in software developm	nent.			
2. Demonst	rate software project management activities such as planning,	sched	aling	and	
Estimatic	n.				
3. Model the	e requirements for the software projects.				
	nd Test the requirements of the software projects.				
	nt the software development processes activities from requirer	ments	to		
	and verification.				
<u> </u>	d evaluate the standards in process and in product.

Module:6 Software Quality Management	5 hours						
Project Quality: Stages of Software Quality Management - Quality Planning - Quality							
Assurance - Quality Control – Quality Standards – Tools for Quality control							
Module:7 People Management	6 hours						
Leadership styles – Developing Leadership skills – Leadership assessment – Motivating People							
- Organizational strategy - Management - Tea	building – Delegation – Art of Interviewing						
People - Team Management - Rewarding - Clie	nt Relationship Management - Organizational						
behavior: a background, Selecting the right	erson for the job -Instruction in the best						
methods- The Oldham-Hackman job character	tics model						
Module:8 Recent Trends	2 hours						
Total h	urs 45 hours						
Text Book(s)							
1. Information Technology Project Manageme	t, Kathy Schwalbe, Seven Edition 2013						
2. Software Project Management in Practice, P	nkaj Jalote, Pearson, 2015.						
Reference Books							
1 Murali Chemuturi, Thomas M. Cagley, -	fastering Software Project Management: Best						
Practices, Tools and Techniques, J. Ross Pul	ishing, 2010						
2. Bole Hughes and Mike Cotterell, "Software	Project Management", Tata McGraw Hill, Third						
Edition, 2002							
3. Microsoft Project 2010 Bible, Elaine Marmel							
Mode of Evaluation:CAT/ Digital Assignments,	Quiz/FAT/ Project.						
Recommended by Board of Studies 11-02-202							
Approved by Academic Council No. 61	Date 18-02-2021						

	<b>Robotics: Machines and Controls</b>	L   ′	ΓL.	<b>P</b> []		С

Pre-requisite	Nil	Syll	abu	s ve	rsio	on
1		•				
0.011.1			1	0.1		
Course Objectiv						
	e parts of robots, basic working concepts and types of robots					
	idents familiar with machine operations using robots					
	applications and implementation of robot control systems					
Course Outcome						
	rking principle of robots					
, i	rpose of various sensor in robot for automation					
0	elop the robotic arm to handle the materials and machines					
	robot programming for control engineering					
	esign the experiments for various robot control operations g Outcomes (SLO): 1,9,14					
Module:1 Intro				2 1	hou	140
	robotics and programmable automation, laws of robotics, and	ator				
	obots, Applications of robots, machine intelligence and flexible					5,
1	robotics, AI in Robotics.	ie au	uom	latio	011	
Module:2 Robo				71	hou	140
	vard and reverse kinematics, robot arm and degrees of freedo	m 1	om			
	d DH parameters, dynamics of robot arm, kinematics of mob				neo	us
	ators and Control		5001		hou	140
	m, functions of drive systems, pneumatic systems, electrical c	Iritto	<sub>c</sub> D			
	ervo motor, need of sensing systems, types of sensors, rob					
		UL V	15101	11 Sy	/sic	ш,

Advancements in NLP have increased their usefulness to the need to be the first point of communication for some custome include being able to help users navigate support articles	Sentiment analysis (also known as opinion mining or emotion AI) is the use of natural language processing, text analysis, computational linguistics, and biometrics to systematically identify, extract, quantify, and study affective states and subjective information. Sentiment analysis is widely applied to voice of the customer materials such as reviews and survey responses, online and social media, and healthcare materials for applications that range from marketing to customer service to clinical medicine.

Instruction       Instruction       Image instruction         Pre-requisite       Nill       Syllabus version         Course Objectives:       1.0         1. To introduce the augmented reality concepts, techniques and models.       2. To introduce the virtual reality and virtual reality models.         2. To introduce the virtual reality and virtual reality models.       5.         Course Outcome:       1.         1. Understand the fundamental of AR, VR and Mixed Reality and to design a customized solution.       2.         2. Familiarize on the concepts, techniques and reporting methods of AR and VR.       3.         Explore the methods used to Visualization, Interaction and Modelling in AR and VR.       4.         Explore the echniques, technologies and approaches needed for developing VR applications.       5.         6.       Developing architecture, simulation, exploration of various AR, VR and Mixed Reality Applications.         10.       Developing architecture, simulation, exploration of various AR, VR and Mixed Reality Applications.         Module:1       Introduction to basic concepts of AR and VR       3 hours         Introducing importance and applications of Augmented and Virtual Reality. Susces of Computer Vision and Multimodal Interaction. Fundamental Concept and Components of Virtual Reality. Primary Features and Present Development on Virtual Reality.       4 hours         Module:1       Introduction to Virtual Reality contents.       4 ho	CSI4005	Augmented Reality and Virtual Reality		Т	P	J	С
Pre-requisite         Nil         Syllabus version           Course Objectives:         1.0           To introduce the augmented reality concepts, techniques and models.         To introduce the virual reality and virtual reality models.           3. To develop augmented reality and virtual reality models.         State of the state of th	0011000		3	-	-	-	_
Course Objectives:       1. To introduce the augmented reality concepts, techniques and models.         2. To introduce the virtual reality concepts, techniques and models.       3. To develop augmented reality and virtual reality models.         3. To develop augmented reality and virtual reality models.       3. To develop augmented reality and virtual reality models.         Course Outcome:       1. Understand the fundamental of AR, VR and Mixed Reality and to design a customized solution.         2. Familiarize on the concepts, technologies and approaches needed for developing AR applications.       5. Familiarize the techniques, technologies and approaches needed for developing VR applications.         6. Developing architecture, simulation, exploration of various AR, VR and Mixed Reality Applications.       3 hours         Module:1       Introduction to basic concepts of AR and VR       3 hours         Introducing importance and applications of Augmented and Virtual Reality Systems. 	A mobile man	ufacturing company	has got several marke	ting options such	as

Three missionaries and three cannibals are on one side of a river, along with a boat that can hold one or two people. Implement an algorithm to find a way to get everyone to the other side of the river, without ever leaving a group of missionaries in one place outnumbered by the cannibals in that place.15 ho4. <b>Register Allocation Problem</b> 15 hoA register is a component of a computer processor that can hold any type of data and can be accessed faster. As registers are faster to access, it is desirable to use them to the maximum so that the code execution is faster. For each code submitted to the processor, a register interference graph (RIG) is constructed. In a RIG, a node represents a temporary variable and an edge is added between two nodes (variables) t1 and t2 if they are live simultaneously at some point in the program. During register allocation, two temporaries can be allocated to the same register if there is no edge connecting them. Given a RIG representing the dependencies between variables in a code, implement an algorithm to determine the number of registers required to store the variables and speed up the code execution	neir ch the Ilgorithm	Radio advertisement campaign, TV non peak hours campaign, City top paper network, Viral marketing campaign, Web advertising. From their previous experience, they have got a statistics about paybacks for each marketing option. Given the marketing budget (rupees in crores) for the current year and details of paybacks for each option, implement an algorithm to determine the amount that shall spent on each marketing option so that the company attains the maximum profit.	
a boat that can hold one or two people. Implement an algorithm to find a way to get everyone to the other side of the river, without ever leaving a group of missionaries in one place outnumbered by the cannibals in that place.15 hd4. <b>Register Allocation Problem</b> 15 hdA register is a component of a computer processor that can hold any type of data and can be accessed faster. As registers are faster to access, it is desirable to use them to the maximum so that the code execution is faster. For each code submitted to the processor, a register interference graph (RIG) is constructed. In a RIG, a node represents a temporary variable and an edge is added between two nodes (variables) t1 and t2 if they are live simultaneously at some point in the program. During register allocation, two temporaries can be allocated to the same register if there is no edge connecting them. Given a RIG representing the dependencies between variables in a code, implement an algorithm to determine the number of registers required to store the variables and speed up the code execution15 hd5. <b>Selective Job Scheduling Problem</b> 15 hdA server is a machine that waits for requests from other machines and resources among clients. All the clients submit the jobs to the server for execution and the server may get multiple requests at a time. In such a situation, the server schedule the jobs submitted to it based on some criteria and logic. Each job contains two values namely time and memory required for execution. Assume that there are two servers that schedules jobs based on time and memory. The servers are named as Time Schedule Server arranges jobs based on time required for execution in ascending order	10 hours	. Missionaries and Cannibals	3.

			-	0 4	0	2
Pre-requisite			Syll	abus		on
				1.(	)	
Course Objectiv		1	1	.:	C.	
	ce students' knowledge of grammar and vocabu n real life situations.	lary to read	and w	rite er	ror-If	ee
00	he students' practice the most common areas o	f written and	d enol	en		
	cations skills.	or written and	a spor			
	ve students' communicative competency through	h listenino a	nd sp	eakino		
*	n the classroom.	in noterining a	ing op	eanne		
Expected Cours						
<u> </u>	a better understanding of advanced grammar ru	les and write	e gran	matic	ally	
	sentences.		0		5	
2. Acquire v	vide vocabulary and learn strategies for error-fr	ee communi	cation			
-	end language and improve speaking skills in ac				xts.	
	listening skills so as to understand complex bus		unicat	ion in	a var	iety
	al English accents through proper pronunciation					
	texts, diagrams and improve both reading and	writing skills	whicl	n wou	ld hel	р
	n their academic as well as professional career.					
	ng Outcomes (SLO): 3,16, 18					
	vanced Grammar				4 ho	ours
	Voice and Prepositions	.1	.1 1			
	eets on Impersonal Passive Voice, Exercises fro	om the prese	ribed	text	4 1	
Module:2 Vo	cabulary Building I				4 ho	ours
	ses, Homonyms, Homophones and Homograp					
	Puzzles; Vocabulary Activities through Web too	ls				
	tening for Specific Purposes				4 hc	ours
	s, short conversations, announcements, briefing	gs and discus	ssions			
	ng; Interpretations					
	eaking for Expression	0		<del>.</del>	6 hc	
	neself and others, Making Requests	& respons	ses,	Inviti	ng	and
Accepting/Declin	0					
	roductions; Role-Play; Skit.				1 ho	
	ading for Information Issages, News Articles, Technical Papers and Sh	ort Storios			4 hc	Jurs
	specific news paper articles; blogs	ion stones				
	iting Strategies				4 ho	11170
	nces, word order, sequencing the ideas, introdu	ction and co	nclusi	on	+ IIC	Juis
. 0	aragraphs; Describing familiar events; story writ		11010001	011		
	cabulary Building II				4 hc	ours
	nain specific vocabulary by describing Obje	ects. Charts.	Foo	d. Sp		
	ctivity: Describing Objects, Charts, Food, Sport					
	tening for Daily Life	1	5		4 hc	ours
	istical information, Short extracts, Radio broad	casts and TV	<sup>7</sup> inter	views		
0	notes and Summarizing					
	pressing Ideas and Opinions				6 hc	ours
	ersations, Interpretation of Visuals and describi	ng products	and p	rocess	ses.	
Activity: Role-Pla	y (Telephonic); Describing Products and Proce	esses	1			
Module: 10 C	omprehensive Reading				4 hc	ours

Reading Comprehension, Making inferences, Reading Graphics, Note-making, and Critical
Reading. Activity: Sentence Completion; Cloze Tests
Module: 11     Narration     4 hours
Writing narrative short story, Personal milestones, official letters and E-mails.
Activity: Writing an E-mail; Improving vocabulary and writing skills.
Module:12         Pronunciation         4 hours
Speech Sounds, Word Stress, Intonation, Various accents
Activity: Practicing Pronunciation through web tools; Listening to various accents of English
Module:13 Editing 4 hours
Simple, Complex & Compound Sentences, Direct & Indirect Speech, Correction of Errors,
Punctuations.
Activity: Practicing Grammar
Module:14 Short Story Analysis 4 hours
"The Boundary" by Jhumpa Lahiri
Activity: Reading and analyzing the theme of the short story.
Total Lecture hours:60 hours

Moc	le of Evaluation: CAT / Assignment / Quiz / FAT / Project ,	/ Seminar	
List	of Experiments		
1.	Determination of Planck's constant using electroluminescen	nce process	2 hrs
2.	Electron diffraction	±.	2 hrs
		1	21
3.	Determination of wavelength of laser source (He -Ne laser		2 hrs
4	diode lasers of different wavelengths) using diffraction tech		2 1
4.	Determination of size of fine particle using laser diffraction		2 hrs
5.	Determination of the track width (periodicity) in a written (	CD	2 hrs
6.	Optical Fiber communication (source + optical fiber + dete	ector)	2 hrs
7.	Analysis of crystallite size and strain in a nano -crystalline fi diffraction	- ·	2 hrs
8.	Numerical solutions of Schrödinger equation (e.g. particle in	n a	2 hrs
	box problem) (can be given as an assignment)		
9.	Laser coherence length measurement		2 hrs
10.	Proof for transverse nature of E.M. waves		2 hrs
11.	Quantum confinement and Heisenberg's uncertainty princip	ple	2 hrs
12.	Determination of angle of prism and refractive index for va	rious colour –	2 hrs

13.	13. Determination of divergence of a laser beam				2 hrs		
14.	14. Determination of crystalline size for nanomaterial (Computer simulation)						
15.	15. Demonstration of phase velocity and group velocity (Computer simulation)						
			Tot	tal Laboratory Hours	30 hrs		
Mod	e of evaluation: CAT / FAT

		1 Svi	0 Ilabi	0 us ve	0 rsic	1
Pre-requisite	Nil	- Sy	nab	1.0	.1510	<u></u>
Course Objectiv	es:					
This course is offe	ered to the students in the 1 <sup>st</sup> Year of B. Tech. in order to or	ient	ther	n tov	vard	S
1	emic thinking and be innovative.					
1. To make stude	ents confident enough to handle the day to day issues.					
	"Thinking Skill" of the students, especially Creative Thinkin	ng Sl	kills			
3.To train the stu	idents to be innovative in all their activities					
	roject report on a socially relevant theme as a solution to the	e exis	sting	issu	es	
Course Outcome						
	nd the various types of thinking skills.					
2. To enhance	he innovative and creative ideas.					
3. To find out a	suitable solution for socially relevant issues-J component

List	of Experiments					
1.	Write an application which will retrieve IP address for given website.	2 hours				
2.	Write a JDBC application which will interact with Database and perform the following task.	4 hours				
	1) Create Student Table with RollNo, Name, and Address field and insert few records.					
	<ol> <li>Using PreparedStatement Object display the content of Record.</li> <li>Using PreparedStatement Object Insert Two Record.</li> </ol>					
	4) Using PreparedStatement Object Update One Record.					
	5) Using PreparedStatement Object Delete One Record.					
	6) Using PreparedStatement Object display the content of Record.					
3.	Create Servlet file which contains following functions:	4 hours				
	1. Connect					
	2. Create Database					
	3. Create Table					
	4. Insert Records into respective table					
	5. Update records of particular table of database					
	6. Delete Records from table.					
	7. Delete table and also database.					
4.	Write down the program in which input the two numbers in an html file and then display the addition in JSP file.	4 hours				
	Write down a program which demonstrates the core tag of JSTL.					
5.	Use Hibernate Query Language to insert, update and delete records in	4 hours				
	database.					
6.	Study and Implement MVC using Spring Framework	4 hours				
7.	Inject Service using Aspect Oriented Programming.	4 hours				
8.	4 hours					
Tota	al Laboratory Hours	30 hours

Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar

Mode of evaluation: Project/Activity

### **Project Component:**

This course aims to equip students with the skills to perform and interpret web mining and Social network analysis. The prescribed hands-on projects will help the students to understand the fundamentals of web mining and social network analysis inference by examining some simple ontology models. Students will develop the skill of web mining and social network analysis with ontology framework through machine learning algorithms and techniques. More advanced models will then be explored by the students through these projects, including machine learning predictive models in an ontology framework. Social network analysis, especially web service methods will progressively be introduced as practical hands-on programming .Special emphasis will be given on how students choose evaluation metrics and how they evaluate those prescribed models influenced by ontology and social network analysis framework.

**Course Objectives:** 

- 1. To explore various methodologies of Intelligent Database Systems.
- 2. To model and design an Intelligent Database System.

### **Course Outcome:**

- 1. Recognize the need of Intelligent Database System and review its characteristics.
- 2. Examine the role of semantic data models in Intelligent Database Systems.
- 3. Construct an object oriented database systems based on requirements.
- 4. Illustrate the role of active and deductive databases as intelligent databases.
- 5. Integrate knowledge based systems and other emerging technologies in DBMS.
- 6. Design and Evaluate an Intelligent Database System.

# Module:1 Introduction

5 hours

Informal definition of the domain - General characteristics of IDBSs - Data models and the relational data model - A taxonomy of intelligent

management system. With the help of this syste one can gain meaningful insights from them.	One of the most critical components in machine learning projects is the database management system. With the help of this system, a large number of data can be sorted and one can gain meaningful insights from them. In this course students are prepared to the design and implement intelligent database system which can recognize the query of a user

Project Component:

This course aims to equip students with the skills to perform Data Engineering. The prescribed hands-on projects will help the students to understand the advances of data extraction, transformation and loading using state of infrastructures. Techniques to read and write data in most common formats in Pandas, Apache Airflow and NiFi. Data Manipulation will be progressively practiced with PostgreSQL, NiFi, Apache Airflow and Elasticsearch. Special emphasis will be given on how students choose data streaming techniques and how they to employ Kafka clusters for the same.

Mode of Evaluation: CAT / written assignment / Quiz / FAT / Project Mode of assessment: Continuous assessment / FAT / Oral examination and others

## Project Component:

From the syllabus topic students are recommended to do J Component project or based on their own interest students are allowed to do the project related to image and video processing. Student is allowed to do individual project or team project (two student).

## **Project Component:**

This course aims to equip students with the skills to perform and interpret Bayesian data analyses. The prescribed hands-on projects will help the students to understand the fundamentals of Bayesian inference by examining some simple Bayesian models. Students will develop the skill of interpreting the visual graph, and will be able to interpret those graphs concerning the Bayesian Data Analysis perspective. More advanced models will then be explored by the students through these projects, including linear regression and hierarchical models in a Bayesian framework. Bayesian computational methods, especially Markov Chain Monte Carlo methods will progressively be introduced as practical hands-on programming. Special emphasis will be given on how students choose evaluation metrics and how they evaluate those presented models influenced by Bayesian framework.

CHY1002	Environmental Sciences	
D		
Pre-requisit	2	Syllabus version
Course Objo		1.1
	make students understand and appreciate the unity of	of life in all its forms, the
	cations of life style on the environment.	
-	understand the various causes for environmental deg	gradation.
	understand individuals contribution in the environm	
	understand the impact of pollution at the global leve	-
	onment.	
Expected	Course Outcome: Students will be able to	
1. Stude	nts will recognize the environmental issues in a prol	blem oriented interdisciplinary
persp	ectives	
	nts will understand the key environmental issues, the	he science behind those problems
1	otential solutions.	
	nts will demonstrate the significance of biodiversit	ty and its preservation
	nts will <b>identify</b> various environmental hazards	
	nts will design various methods for the conservation	
	nts will <b>formulate</b> action plans for sustainable alterr	natives that incorporate science,
	nity, and social aspects	
	nts will have foundational knowledge enabling them	
well a	as enter a career in an environmental profession or hi	igher education.
Student Lea	<b>rning Outcomes (SLO):</b> 1,2,3,4,5,9,11,12	
Module:1	Environment and Ecosystem	7 hours
Kev enviror	mental problems, their basic causes and sustai	nable solutions IPAT equation
-	earth - life support system and ecosystem component	_
•	system; Ecological succession- stages involved, Pr	
	esarch, xerarch; Nutrient, water, carbon, nitrogen, cy
