VISION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

Transforming life through excellence in education and research.

MISSION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

World class Education: Excellence in education, grounded in ethics and critical thinking, for improvement of life.

Cutting edge Research: An innovation ecosystem to extend knowledge and solve critical problems.

Impactful People: Happy, accountable, caring and effective workforce and students.

Rewarding Co-creations: Active collaboration with national & international industries & universities for productivity and economic development.

Service to Society: Service to the region and world through knowledge and compassion.

VISION STATEMENT OF THE SCHOOL OF INFORMATION TECHNOLOGY

- To be a leading school that provides transformative education through qualitative teaching and learning practices.
- To be a centre of excellence in education and research, producing global leaders for improvement of the society.

MISSION STATEMENT OF THE SCHOOL OF INFORMATION TECHNOLOGY

- To provide sound fundamentals, and advances in Information Technology, Software Engineering, Digital Communications and Computer Applications by offering world class curricula.
- To create ethically strong leaders and trend setters for next generation IT.
- To nurture the desire among faculty and students from across the globe to perform outstanding and impactful research for the benefit of humanity and, to achieve meritorious and significant growth.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

- 1. Graduates will be software practitioners and leaders, who would help solve industry's technological problems.
- 2. Graduates will be engineering professionals, innovators or entrepreneurs engaged in technology development and research, technology deployment, or engineering system implementation in industry.
- 3. Graduates will function in their profession with social awareness and responsibility.
- 4. Graduates will interact with their peers in other disciplines in industry and society and contribute towards research and economic growth of the country.
- 5. Graduates will be successful in pursuing higher studies in engineering or management.

PROGRAMME OUTCOMES (POs)

POs Description

- 1 Having an ability to apply mathematics and science in engineering applications
- 2 Having a clear understanding of the subject related concepts and of contemporary issues
- 3 Having an ability to design a component or a product applying all the relevant standards and with realistic constraints
- 4 Having an ability to design and conduct experiments, as well as to analyze and interpret data
- 5 Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice
- 6 Having problem solving ability- solving social issues and engineering problems
- 7 Having adaptive thinking and adaptability
- 8 Having a clear understanding of professional and ethical responsibility
- 9 Having cross cultural competency exhibited by working in teams
- **10** Having a good working knowledge of communicating in English
- 11 Having a good cognitive load management [discriminate and filter the available data] skills
- 12 Having interest in lifelong learning

PROGRAMME SPECIFIC OUTCOMES (PSOs)

- PSO1: Apply mathematical concepts to solve computational tasks and relate interdisciplinary solutions through logical reasoning ability.
- PSO2: Analyze the frameworks of software engineering and use design methodologies for developing complex software systems using advanced techniques.
- PSO3: Acquire the expertise in various core and advanced domains of computing and provide innovative solutions.

CREDIT STRUCTURE

Category-wise Credit distribution

Sl.No.	Category	Credits
1	University Core (UC)	61
2	Programme Core (PC)	76
3	Programme Elective (PE)	72
4	University Elective (UE)	12
Minimum '	Fotal Number of Credits	
(As per Aca	nd. Council)	221

		3	1	0	0	4
Pre-requisite	None	Sy	llabu	s Vei	rsio	n
			1	0.1		

Course Objectives:

- **1.** The aim of this course is to motivate the learners for understanding the fundamental concepts in discrete mathematics required for software engineering such as sets, functions, sequences, computing techniques, mathematical logics, proof techniques, graph theoretical approaches, relations, recurrence equations and new structured types.
- 2. On completion of this course, the students are expected to implement the learned discrete mathematical ideas in realistic projects of software technology, theoretical computer skills, computer algorithms, networks and data structures.

Expected Course Outcome

- 1. Know the basic properties and operations of sets, sequences and also apply the basic principles of counting, permutations and combinations for realistic problems
- 2. Recognize the Boolean logic through the truth tables and also prove the results by direct, indirect methods and by mathematical induction
- 3. Learn the basic concepts of graphs, shortest path algorithms, concepts of trees and minimum spanning tree algorithms
- 4. Analyse the various relations and also solve the recurrence equations
- 5. Understand the concepts of structured types, three-valued logic and binary trees. Vector calculus with physical understanding to deal with subjects such as fluid dynamics

Module:1	Sets, Sequences and Counting	7 hours							
-	Operations on Sets and Cardinality - The Pigeonhole Principle - Sequences - The Characteristic								
Sequence of a Subset – Counting – Number of k-Sequences on an n-Set – Number of k-									
Permutation	s on an n-Set – Number of k-Subsets of an n-Set.								
Module:2	Boolean Expressions, Logic and Proof	7 hours							
Boolean Ex	pressions and Truth Tables – Predicates and Quan	tifiers – Valid Arguments – Direct							
and Indirect	Proofs – Mathematical Induction.								
Module:3	Graphs	7 hours							
Basic Term	inology of Graphs – Special Graphs – The Conce	ept of Degree – Paths – Circuits –							
Connectedn	ess – Euler and Hamiltonian Circuits – Matrix R	epresentations of Graphs – Graph							
Isomorphism	Isomorphism – Isomorphic Invariants – Shortest Path Problem.								
Module:4	Trees	6 hours							
Definition of Trees – Characterizing Trees – Rooted and Binary Trees and Their Properties –									

Casania - Tass	Minimum	Constant Trans
Spanning Tree –	Minimum	Spanning Trees.

Module:5	Relations	6 hours
	Matrix and Digraph of a Relation – Properties of Relation – Properties	
Module:6	Recurrence Equations and Series	5 hours
	Equations – Solving First Order Linear Recurrence arrence Equations – Infinite Series – Zeno's Paradox	
Module:7	Defining New Structured Types	5 hours

room. The light is turned on or off by changing the state of any one of the switches. More specifically the following should happen:

- 1. The light is OFF when all 3 switches are open.
- 2. Closing any one switch will turn the light ON.
- 3. Then closing the second switch will have to TURN OFF the light.
- 4. If the light is OFF when the 2 switches are closed, then by closing the third switch the light will TURN ON.
- 2. Design hardware that implements the following pseudo-code using the provided Comparator, Adder and Registers, along with as many multiplexers and demultiplexers as needed. The comparator has two inputs In1 and In2, and three outputs, C1, C2, and C3. If In1 < In2, C1 = 1; if In1 = In2, C2=1; if In1 > In2, C3 =1 (for a given In1 and In2, only one of the comparator outputs can be 1). The Adder takes as inputs two numbers p and q, and produces an output Sum. There are 5 registers for storing the 5 variables, A, B, X, Y, and Z. Hint: You do not need to use truth table or K-maps. Insert the muxes/demuxes as appropriate, and show the signal connections from the input registers A, B, X to the output registers Y and Z, through the muxes, comparator , adder, and demuxes. Be sure to show the equations for the select lines of the multiplexers/demultiplexers in terms of the comparator outputs, C1, C2, and C3. Pseudo-code:

If A<B then Z=X+AElse if A=B then Z=X+BElse Y=A+B

- 3. Design a simplified traffic-light controller that switches traffic lights on a crossing where a north-south (NS) street intersects an east-west (EW) street. The input to the controller is the WALK button pushed by pedestrians who want to cross the street. The outputs are two signals NS and EW that control the traffic lights in the Ns and EW directions. When NS or EW are 0, the red light is on, and when they are 1, the green light is on. When there are no pedestrians, NS=0, EW=1 for a minute, follow by NS=1 and EW=0 for 1 minutes, and so on, when WALK button is pushed, Ns and EW both become 0 for a minute when the present minute expires. After that the NS and EW signals continue alerting. For this traffic-light controller a) Develop a state diagram. (Hint: can be done using 3 states) b) Draw the state transition table. C) Encode the states using minimum number of bits. D) Derive the logic schematic for a sequential circuit which implements the state transition table.
- 4. Many game shows use a circuit to determine which of the contestants ring in first. Design a circuit to determine which of two contestants rings in first. It has two inputs S1 and S0 which are connected to the contestants' buttons. The circuit has two outputs Z1 and Z0 which are connected to LED's to indicate which contestant rang in first. There is also a reset button that is used by the game show host to asynchronously reset the flip-flops to the initial state before each question. If contestant 0 rings in first, the circuit turns on LED 0. Once LED 0 is on, the circuit leaves it on regardless of the inputs until the circuit is asynchronously reset by the game show host. If contestant 1 rings in first, the circuit turns on LED 1 and leaves it on until the circuit is reset. If there is a tie, both LED's are turned on. The circuit requires four states: reset,

contestant 0 wins, contestant 1 wins, and tie. One way to map the states is to use state 00 for reset, state 01 for contestant 0 wins, state 10 for contestant 1 wins, and state 11 for a tie. With this mapping, the outputs are equal to the current state, which simplifies the output equations.

- 5. Design a simple circuit that could operate a car alarm. The circuit has one input Y which would be connected to the car's door switch to determine if the car door is open or shut. When the door is shut Y = 0, and when the door is open Y = 1. The circuit has one output Z which is used to operate a horn by shorting the wires that go to the horn switch in the steering wheel. When Z = 1, the switch is activated and the horn honks. The circuit would be asynchronously reset by the accessories power line that is high when the ignition is turned on or is in accessory-only mode, both of which require the key to the car.
- 6. Design a 12 hour Digital clock which is usually set up to start at 12:00, and they count 12:01, 12:02, 12:03, 12:04, 12:05, 12:06, 12:07, 12:08, 12:09, 12:10, and eventually the clock gets to 12:58, 12:59, 1:00, and so on. The one's place of the minutes (the right-most digit) counts 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, and then repeats. The ten's place of the minutes (second digit from the right) counts 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, and repeats.

Microprocessor Based Design Experiments

- 7. Design a Microprocessor based combinational lock which has a combination of five digits. The five digits are entered from a keyboard and they are to be entered within a 10 seconds. If the right combination is entered the lock will open. If after 10 seconds either all five digits are not entered or a wrong combination is entered then the display will show an error message. Then the system will allow 5 seconds for the first digit to be entered the second time. If after this time the digit is not entered, the system will turn ON the alarm. If the second try fails, the alarm is also turned ON. Then to reset the system the power has to be turned OFF.(Scrambling Keypad)
- 8. Design a microprocessor based Smart Pill Box Alarm System for Elderly people. The system will alert the user 3 times per day for taking up the pills. The user has to set the system into fixed slots: for example: Morning, Afternoon, Evening and Night. The system will deliver a display message such as -Take this Pill X -five minutes before the scheduled time. A real time clock is to be included in the system to display the current time and will show the alarm as per the time slots.
- 9. Design an intelligent system for the following real time situation.

Consider you are driving a car. You are having a limited display area, where you need to display the fuel status, temperature status, Speed limit, Gear Position based on the priority which suits the following context.—There is an obstacle at a distance of 100m and the same is sensed by a sensor. Based on the sensor input, the display has to be displayed to indicate the function to be performed by the driver.

10. An event sequence recorder has to be designed for a hospital in your city which will monitor a patient's pulse rate, blood pressure, body temperature. The equipment accepts inputs from different sensors, and prints the sequence in which they operate. It

scans the inputs every millisecond and prints in a compact, type of event (normal or abnormal) and time of occurrence. It also communicates these events over an RS232C link to a remote computer. A real-time clock is included. Design the processor unit using 8086. 11. Elderly users often forget their daily routines. Hence you need to design a microprocessor based unit to help them remember their monthly expenses and bill payments. For example, their house rent, telephone bills, electricity bills, gas requirement, etc. An alarm has to be blown to remind them and when they reset it, it is understood that they have paid and the expense has to be calculated for the entire month and at the end of the month the total expense has to be intimated. 12. Let say that you work in VIT. Each day there is a rush hour in lunch time – everyone wants to get in the food line first. Your school is at the top floor and only way to get to the lobby is to use a lift. So, you call the lift and wait... and wait. Your waiting time could be infinite because everyone in bottom floors are loading the lift, so it never reaches the top! And when it finally does, your lunch time is over. Design a system to overcome this infinite waiting time. Recommended by Board of Studies 4-12-2015 by No. 39th Approved Date 17-12-2015 Academic Council

SWE1004	Database Management Systems		L 7 3 (0	2 0	<u>C</u>
Pre-requisite	None		<u>Syllab</u>	-	-	
			v. 1.20			
Course Objective	es:					
1. Te	o study the salient features of database systems a	and the design process	s at co	nce	ptual	an
	gical level.					
	o implement the database design using relational	algebra and SQL.				
3. To	o know the supporting subsystems of DBMS					
Expected Course	Outcome:					
1. C	Compare the file system and DBMS, and know D	BMS architecture and	l classif	fica	tion.	
2. U	Inderstand conceptual database design					
3. E	Explain the relational model and Write Queries in	relational algebra				
4. C	Create and manipulate the database using SQL and	l write routines using	PL/SQ	ĮL		
5. E	valuate the design of database.					
6. R	ead or write made in the database by single user,	multiple user and dur	ring fai	lure	es.	
7. E	execute a query behind the scene and physical des	ign				
8. D	Design ER model and Implement it using SQL and	d PL/SQL

SWE1006	Theory of Computation	Ľ	Т	ΡJ	С
				0 0	$\frac{\overline{3}}{3}$
Pre-requisite	MAT1013/MAT1016	Sylla	bus	versi	on
				v.	1.0
Course Objecti	ves:				
	bescribe mathematical models of computation along with their	relatio	nsh	ips w	ith
	ormal languages				
	iscuss regular languages and context free languages which an	re cruc	cial	to	
	nderstand how compilers and programming languages are built				
	comprehend that not all problems are solvable by computers and on the admit efficient algorithms	na son	ie p	roble	ms
	nterpret rigorous mathematical reasoning skills				
1. 1	Respect regorous mationation reasoning skins				
Expected Cour	se Outcome:				
	emonstrate knowledge of basic mathematical models of compute	tation a	and	their	
r	elationalship with to formal languages.				
	lentify different type of Finite Automata and their capabilities.				
	nalyze Regular Language and Context Free Grammar				
	reate push down automata for a given language				
	Discuss the abstract models of Turing machine and its types	4 a	1		
	reate modern techniques to solve P,NP,NP hard and NP comple ecognize whether a problem is decidable or undecidable	te prob	blem	IS	
7. F	ecognize whether a problem is decidable of undecidable				
Module:1 In	croduction 61	nours			
Alphabets. Strir	gs and Languages and Grammars.				
, ~, ~, ~, ~, m	gs and Languages and Oraninars.				
Finite Automata	- Deterministic Finite Automata (DFA), Language of a DFA,				
Finite Automata Finite Automat	- Deterministic Finite Automata (DFA), Language of a DFA, a (NFA), Language of a NFA. Equivalence of DFA's and 1	NFA's,	, NI

SWE1007	Programming in Java		L	T P J C
			3	0 2 4 5
Pre-requisite	CSE1002			bus versio
			v.1.0	
Course Objectiv	ves:			
	o understand fundamentals of programming	such as variable	s, con	ditional an
	erative execution, methods, etc.			
	o Understand fundamentals of object-oriente		in Jav	'a includin
	efining classes, invoking methods using class l			
	o learn to use java in variety of technology and			
	e able to use the Java SDK environment to	create, debug an	d run	simple Jav
p	rograms.			
Ermanted Course	a Outooma			
Expected Cours				
	Design simple java programs for specific proble olve problems using object oriented approac		a iovo	applicatio
	sing SDK environment	ii and debug ui	e java	applicatio
	Develop application using inheritance and interf	aces		
	Design and develop Graphical user interface us		Swing	o/ AWT
	oncepts.	ing rippiets and		,
	corporate the cutting-edge frameworks for in	nproving the cod	ling de	esigns usin
	DBC connectivity	1 0	0	0
	uild Java application using multithreading and	multitasking.		
7. Ir	ntegrate the connectivity among the terminals	are implemented	l using	networkin
CO	oncepts			
	he ability to work effectively in a development	of any java appl	lication	i using
CI	urrent trend of Java advancements			
	roduction to OOPS concepts and their	8	hours	
	plementation in	Q ()	• 1 1	1 4 4
	eatures of Java-C, C++ vs. Java first program			
	ssions, decision making and branching. OOP ods and variables in Java-Class Member a		-	
U	emory management using Garbage collect			
	l Overriding-Use of this and super keywords-I			
	and Static Binding-Runtime Polymorphism			•
	Nested classes and its uses.	and its power	lobuu	or orabb an
Module:2 Str	eam based I/O in Java and String handling	6	hours	
	Input Output-Introduction and Implementation	of Byte stream,	Chara	cter stream
Buffered stream,	, Data stream, Object stream and File I/O. Strin			
Builder class-Str	ring Tokenizer class			

Module:3	Packages and Exception Handling	6 hours
Introducti	on of Package-Programs related to Packages-Scope o	
	and Error-Throwable class-Try, catch and finally b	
checked a	nd unchecked exceptions-user defined exception	
Madular	Multithuss din s	(hours
Module:4	8	6 hours
	Program, Process, Thread?-Multiprocessing, Multit d suspend methods-Integrated Thread-Synchronizati	6
notifyAll(on-ose of wait(), notify() and
•	·	
	5 Database connectivity	5 hours
Statemen	JDBC API?-Driver types-Two-tier and Three-tier in at overview-Sending Batch updates-Result Set over at overview-Callable Statement overview	
Module:6	Introduction to Applet and Japplet	6 hours
	started with Applets-Defining an Applet subclass-I	
API Con Check B pane, Scr	s IDE. Introduction to JFC and Swing, Features of the nponents, Jcomponent Class, Windows, Dialog Box soxes, Menus, Toolbars, Implementing Action inter rollbars, Lists and Combo Boxes, Text-Entry Compo nd Trees, Printing with 2D API and Java Print Service	xes, and Panels, Labels, Buttons, face, Pane, JscrollPane, Desktop onents, Colors and File Choosers,
Module:7	/ Networking	6 hours
Module:7 Introducti	Networking on to Networking in Java-What is TCP and UDP	6 hours -What is Socket and Port-
Introducti Implemen		-What is Socket and Port- s of Java networking programming-

		List of Challenging Experimen	
1.	_	ement stack and use it to convert infix to postfix exp	ression
2.	Evalu	ate postfix expression	
3.	_	ement Towers of Hanoi problem	
4.	Imple	ement Queue and Circular Queue	
5.	Imple	ement singly and doubly linked lists	
6.	-	ement Circular Singly Linked list	
7.	Repre	esent a polynomial as a linked list and write function	ns for polynomial
	addit	ion.	
8.	-	ement Insertion, Bubble, and selection sorts	
9.	-	ement heap, merge, quick and radix sorts	
10.		ement Binary and Linear search	
11.	Imple	ement a Binary tree. Produce its pre-order, in-orde	r, and post-order
	traver		
12.	-	ement binary search tree insertion and deletion.	
13	-	ement hashing techniques	
14		orm Graph traversal	
15	-	ement Dijkstra's algorithm	
	STA	CK ADT	
	1.	Students of a Programming class arrive to sub	mit assignments
		register numbers are stored in a LIFO list in the o	0
		nments are submitted. Write a program using arra	
	regist	ter number of the ten students who submitted first.	

Register number of the ten students who submitted first will be at the bottom of the LIFO list. Hence pop out the required number of elements from the top so as to retrieve and display the first 10 students.

2. To facilitate a thorough net surfing, any web browser has back and forward buttons that allow the user to move backward and forward through a series of web pages. To allow the user to move both forward and backward two stacks are employed. When the user presses the back button, the link to the current web page is stored on a separate stack for the forward button. As the user moves backward through a series of previous pages, the link to each page is moved in turn from the back to the forward stack.

When the user presses the forward button, the action is the reverse of the back button. Now the item from the forward stack is popped, and becomes the current web page. The previous web page is pushed on the back stack. Simulate the functioning of these buttons using array implementation of

Stack. Also provide options for displaying the contents of both the stacks whenever required.

3. Design a program to employ a stack for balancing symbols such as parentheses, flower braces and square brackets, in the code snippet given below.

```
For(i=0;i<n;i++)
```

```
{
```

if(i<5)

{ z[i]=x[i]+y[i];

```
p=(((a+b)*c)+(d/(e+f)*g);
```

}

Ensure that your program works for any arbitrary expression.

4. Most of the bugs in scientific and engineering applications are due to improper usage of precedence order in arithmetic expressions. Thus it is necessary to use an appropriate notation that would evaluate the expression without taking into account the precedence order and parenthesis.

a) Write a program to convert the given arithmetic expression into i) Reverse Polish notation

ii) Polish notation

b) Evaluate the above notations with necessary input.

5. Some priests are given three poles and a stack of 4 gold disks, each disk a little smaller than the one beneath it. Their assignment is to transfer all 4 disks from one of the 3 pole to another with 2 important constraints. They can move only one disk at a time, and they can never place a larger disk on top of a smaller one. Design a recursive program for the above Towers of Hanoi puzzle using stack.

QUEUE ADT:

6. In a theme park, the Roller-Coaster ride is started only when a good number of riders line up in the counter (say 20 members). When the ride proceeds with these 20 members, a new set of riders will line up in the counter. This keeps continuing. Implement the above scenario of lining up and processing using arrays with Queue ADT.

7. When burning a DVD it is essential that the laser beam burning pits onto the surface is constantly fed with data, otherwise the DVD fails. Most leading DVD burn applications make use of a circular buffer to stream data from the hard disk onto the DVD. The first part, the _writing process' fills up a circular buffer with data, then the _burning process' begins to read from the buffer as the laser beam burns pits onto the surface of the DVD. If the buffer starts to become empty, the application should continue filling up the emptied space in the buffer with new data from the disk. Implement this scenario using Circular Queue.

8. a) There is a garage where the access road can accommodate any number of trucks at one time. The garage is built in such a way that only the last truck entered can be moved out. Each of the trucks is identified by a positive integer (a truck_id). Implement dynamically to handle truck moves, allowing for the following commands:

- 1) On_road (truck_id); ii) Enter_garage (truck_id);
- 1) Exit_garage (truck_id); iv) Show_trucks (garage or road);

If an attempt is made to get a truck out which is not the closest to the garage entry, the error message $-Truck \ x \ cannot \ be \ moved \|$ should be displayed.

1) For the aforementioned scenario, assume now a circular road and two entries: one for entry, another for exit. Trucks can get out only in the order they got in. Write a program dynamically to handle truck moves allowing for the following commands

i) Enter garage (truck name)

ii) Exit garage (truck name)

iii) Show trucks

LIST ADT

9. Imagine an effective dynamic structure for storing polynomials. Write operations for addition, subtraction, and multiplication of polynomials.

I/O description. Input:

 $p1=3x^7+5x^6+22.5x^5+0.35x^2$

 $p2=0.25x^3+0.33x^2-0.01$

10. Given two sorted lists L1 and L2 write a program to merge the two lists in sorted order after eliminating duplicates.

11. Write a program to maintain the records of students in an effective dynamic structure. Search a particular record based on the roll number and display the previous and next values of that node with time complexity of O(1).

12. **Assume FLAMES** game that tests for relationship has to be implemented using a dynamic structure. The letters in the FLAMES stand for Friends, Love, Affection, Marriage, Enmity and Sister. Initially store the individual letters of the word _flames' in the nodes of the dynamic structure. Given the count of the number of uncommon letters in the two names _n', write a program to delete every nth node in it, till it is left with a single node. If the end of the dynamic structure is reached while counting, resume the counting from the beginning. Display the letter that still remains and the corresponding relationship

Eg., If Ajay and Jack are the two names, there are 4 uncommon letters in these. So delete 4th node in the first iteration and for the next iteration start counting from the node following the deleted node.

SORTING AND SEARCHING

13. Assume in the Regional Passport Office, a multitude of applicants arrive each day for passport renewal. A list is maintained in the database to store the renewed passports arranged in the increased order of passport ID. The list already would contain there cords renewed till the previous day. Apply Insertion sort technique to place the current day's records in the list.

Later the office personnel wish to sort the records based on the date of renewal so as to know the count of renewals done each day. Taking into

consideration the fact that eac			s (around 25	
fields), follow Selection sort log	ic to implement th	ne same.		
14. Implement a comparison bas to sort the following strings.	sed sorting algorit	hm which	is not in-place	
Best, true, hill, dove, van, g	ood, egg, lap			
15. Write a program to impleme	ent Bubble sort, H	Ieap sort a	nd Quick sort	
techniques to arrange the follow	wing sequence of	elements	in descending	
order.				
9, -4, 5, 8, -3, 7, 0, 4, 1, 2.				
Display the count of number of method.	of comparisons a	nd swaps	made in each	
Apply the same sorting techniqu	U U	e		
generate 5000 integers within th	U U			
set]. From your observation a	-	ermine the	e best sorting	
technique for working with large	e numbers.

program for the above.
Write a program to implement a simple message transfer from client to server process using UDP sockets.
SAMPLE CHALLENGING EXERCISES
1. There are 20PC's in your network. Five PC's are connected to one Ethernet hub, and five PC's are connected to another hub. Each hub is connected to separate switch and both the switches are connected to a separate router. The routers are connected via an Ethernet bridge. The remaining 10 PC's are connected directly to one of the two switches. How many Ethernet segments are there? Implement this scenario using cisco packet tracer.
2. Two PC's are located in adjacent rooms and a third PC is in a building 300 yards away. Explain how you could connect the three PC's in a single network. Implement this scenario using cisco packet tracer
3. In CRC error correction scheme, choose pattern 1101 and data 100100. Write a code to encode the given data.
4. There is trouble ticket raised by users of an organization that their files are not getting uploaded in ftp server. Measure the performance between the ftp server and client and diagnose using iperf tool.
5. A company needs is granted the site address 201.70.64.0. The company needs six subnets. Design the subnets using cisco packet tracer.
6. In an Ipv4 packet the value of header length is 1000 in binary. Write a code to find, how many bytes of options are being carried by this packet?
7. Write a code to implement border gateway protocol (BGP).
8. Implement a TCP/IP socket based ATM System. Make the server to maintain the customer details (name, card no, pin and balance). When a client wants to withdraw amount, validate his login with card no & pin, display a welcome message and perform the withdraw operation if he is having sufficient balance or display a warning message.
9. Write a UDP based server code to get the date of birth of the client and calculate the age as on today. Client has to enter year, month and day of birth. For example, if the date of birth of a user is 1/07/2001 then his age is 14 years 0 months and 17 days if today's date is 18/07/2015. Get today'sdate from the server.
10. A reputed organization has two branches in Vellore. In one of the branch office a new manager has been appointed. The Senior Manager from the main office has to send the important records to the branch

Module:4Defining the System4 hoursA Use case Primer – Organizing Requirements Information – Organizing Requirements of
Complex Hardware and Software Systems, Organizing Requirements for Product Families. The
Vision Document. Product Management – The Role of Product Champion – Primary Activities
fora Product Manager – Supporting Activities .Establishing Project Scope – The Problem of
Project Scope – The Requirements Baseline Setting.

Module:5	Refining the System Definition	8 hours
Software R	equirements – Refining the Use Cases – How Use C	Cases Evolve- The Scope of Use
case- Exten	ding Use Case- Developing the Supplementary Spe	cification Building the Right
System- Fro	om Use Cases to Implementation – Mapping Requir	ements to Design and code –
FromUse C	ases to Test Cases- Tracing Requirements – The Tra	ceability Relationship – Using

Traceability Tool.

Module:4	Software Maintenance Basics	6 hours

Software Maintenance; customer's View point; Economic of Maintenance; A Bird's Eye view of Maintenance; Different type of software products; An Overview of corrective Maintenance; Other forms of Maintenance; Adaptive Maintenance; Enhancement Requests; Maintenance Processes; Customer side preliminary Activities; Skill sets needed for the various Roles During Problem Reporting.

Module:5 Problem Resolution & Fix Distribution

9 hours

Problem Resolution: High Level Overview of Activities in problem Resolution; Categorizing the problem; Identifying the Right Developer for fixing the problem; Reproducing the problem; Scheduling for release.

Fix Distribution: High Level Overview of Activities in problem Resolution; Categorizing the problem; Identifying the Right Developer for fixing the problem; Reproducing the problem; Scheduling for release.

Module:6	Contemporary issues	2 hours
		-

Total Lecture hours:

30 hours

Text Books

- 1. McConnell, Steve, Code complete: A practical handbook of software construction, 2nd Edition, Microsoft Press, 2012.
- Gopalaswamy Ramesh and Ramesh Bhattiprolu, Software Maintenance Effective Practices forGeographically Distributed Environments, Tata McGraw-Hill Education, 2012.

Reference Books

- 1. A. Hunt and D. Thomas, The Pragmatic Programmer from journey man to master, Addison-Wesley, 2010.
- ^{2.} B.W. Kernighan and R. Pike, The Practice of Programming, Pearson Eductaion India, 2012.

SWEBOK V3.0, Guide to the Software Engineering Body of Knowledge, A Project of the IEEE

Pre-requisi	ite	MAT1011 - Calculus for Engin	neers	Sylla		Vers	sion
<u> </u>		1	.0				
Course Ob	-		.	C 1'		1 1	
		ve of this course is to give a presentation of	-			-	
		power and utility through applications to	-		-		-
		echniques are useful in the analysis of signal			-		-
-		of the course the students are expected to l	_			-	
		ormations, matrices and inner product space				-	
to so	olve pro	blems in cryptography, computer graphics a	nd Fourier and w	vavele	et tra	nstor	ms.
Expected C	Course (Outcome:					
1.	Observ	e the various method to solve the system of	linear equations	and e	igen	value	•
	problem	ns solved by iterative methods					
2.	Unders	tand the concepts of Vector spaces, Basis an	d finite dimension	onal v	ecto	r spac	ces
Module:1	Syster	n of Linear Equations	5	hours			
			_				
		ss-Seidel iterative methods for solutions of l	•		r rat	es of	
convergenc	e. Gener	ralized conjugate gradient, Krylov space and	Lanczos metho	ds.			
Module:2	Iterati	ive methods	6	hours	5		
Symmetric,	non-syı	nmetric and generalized eigenvalue problem	l 1s. Singular valu	e deco	mpo	ositio	ns.
•	-						
Module:3	Vector	r Spaces	6	hours	5		
The Euclide	ean Spa	ce – Vector Space – Subspace - linear cor	hination-span-l	inearl	v de	nend	ent-
		- dimensions-finite dimensional vector space		lineuri	y ac	pena	ent
	-		-				
Module:4		r Transformations		hours			
		ions – Basic properties - invertible linear	transformation-	matri	ces	of lii	near
transformat	ions.						
Module:5	Vecto	r spaces of Linear Transformations and	6	hours	5		
	Appli	cations.					
Vector spac graphics.	e of line	ear transformation – change of bases – simila	arity – applicatio	on to c	omp	uter	
Module:6	Fouri	er Transforms	7	hours	5		
		Fourier and inverse Fourier transforms, unco		– pow	ver sp	pectra	ıl
		noise, Discrete Fourier transform – Fast Fo					
				– pow	ver sj	pectra	2

Module:7	Wavelet transform	7 hours
Inversion for decompositi	brmula, scaling functions – Haar wavelets – (ion.	Drthonormal wavelets – wavelet
Module:8	Contemporary issues	2 hours
	pert Lecture	- 10015

		List of Challenging Experiments (Ir	
1.		a program using c# to create a DLL for laptop obje	
	• 1	uch as methods, fields, property etc.Create a window	
		ious types available in laptop object using the conc	cept of Reflection.
	[Hint: 3	Store the count of types in registry]	
2.	method	e a DLL for ATM Object with necessary field s such as initiating, deposit and withdrawal. Wri n to perform the following,	
		cover all the types that are available in the DLL using the types that are available in the DLL using the types.	ing the concept of
		ter initiating the basic information of the c ation using SOAP format.	ustomer perform
	withdra	eserialize the above and invoke the methods suc wal using the concept of late binding. While perfor for the minimum balance value that has to be retrieve	ming withdrawal,
3.	Create	a DLL Sum with overloaded methods such as,	
	Sum_a	(double s, double t );	
	Sum_a	(int i, int j);	
	Sum_a	(int k, double b);	
	Write a	menu driven program to perform the following,	
	(i) Disc	cover all the types that are available in the DLL usi	ng the concept of

	multicast delegates.			
	(ii) After initiating the values perform serialization	on using Binary fo	ormat.	
	(iii) Deserialize the above and invoke the method binding. If the signature of a method which is inv then store the result value in registry.	U	L	
4.	Create a DDL for Calculator with basic operation	n such as add, sub	o, multiply	
	and divide. All the methods defined in the calc	ulator should hav	ve a return	
	type. Using the concept of multicast delegates &	get invocation lis	t () invoke	
	the methods in calculator object.

					V.	1.
Course Objective				•		
	gain critical understanding of e-governance v learn how to use ICT in public governance sy	1	inary v	view	•	
	understand the design and evaluation various		ramew	vork	s	
5. 10	and estimation various		runiev	VOIR	5	
Expected Course	Outcome:					
*	ne basics of e-governance in particular Nation	al e-governance	plan.			
	concepts of e-governance in various applicati		L			
	the concepts of process reengineering and ch		nt.			
4. Select and	Apply the various technologies in e Governa	nce projects.				
5. To create	or setup the required infrastructure for e gover	mance projects				
6. Identify ar	nd choose the open standards for e-governance	2.				
7. Use variou	is tools used for e governance					
8. Design and	d develop citizen centric systems					
		1

1. 2. 3. Expected Cou 1. 2. 3.	To introduce fundamental concepts of big data as To elucidate different data learning techniques. To explore various data analytic and visualizatio	-				
2. 3. Expected Cou 1. 2. 3.	To elucidate different data learning techniques. To explore various data analytic and visualizatio	-				
3. <b>Expected Cou</b> 1. 2. 3.	To explore various data analytic and visualizatio	n tools.				
1. 2. 3.						
1. 2. 3.						
2. 3.	Understand characteristics and sources of big dat	ta.				
	Recognise of various data analytical techniques a data.		or hand	ling	g big	
4.	Apply data analytic methodologies in streaming	data.				
	Familiar with diverse learning models and cluste					
	Use visualization techniques and tools in big dat					
	Campare the different types of frameworks and t					
	Analyze Big Data in various forums like Social I Illustrate the phases of Big Data Analytics with t				ario	15
0.	domains and presenting the results.	ine incip of Data S	JUIS 1101	.11 V	ano	10
	1 C					
Module:1 In	ntroduction to Big Data	7 h	nours			
Analytics – Nu	uances of big data – Value – Issues – Case for Big	g data – Big data	options	Τe	am	
	g data sources – Acquisition – Nuts and Bolts of					
Security, Com	pliance, auditing and protection - Evolution of Bi	g data – Best Pra	ctices f	or 1	Big o	lata
Analytics - Big	g data characteristics - Volume, Veracity, Velocit	y, Variety				
Module:2 D	Data Analysis and Approaches	7 1	Iours			
Mouule.2 D	vata Anarysis and Approaches	/ 1	10015			
	nalytic scalability – Convergence – parallel proce				ta se	ts -
	ods - Analysis approaches - Statistical significant	nce – business ap	pproach	es	_	
Analytic innov	vation – Traditional approaches – Iterative					
Module:3 S	tream Data Mining	5 h	nours			
Niodulete S		C II	iours			
Introduction to	o Streams Concepts - Stream data model and	architecture - St	tream (	Cor	nput	ing
Sampling data	a in a stream – Filtering streams – Counting	distinct elemen	ts in a	l st	rean	1 -
Estimating mo	oments - Counting oneness in a window - Decay	ving window – R	eal tim	e A	naly	tic
Platform(RTA	P) applications.					
Module:4 P	Predictive Analytics	8 h	nours			
	-					
	alytics – Supervised – Unsupervised learning – N					
	Deviations from normal patterns – Normal beha	-	-			
• •	g Frequent itemsets - Market based model - Apric	•		-	-	
	memory - Limited Pass algorithm - Counting	g frequent items	ets in	a s	trear	n ·
Clustering Tec	chniques – Hierarchical – K- Means.					

Module:5	Visualizations	5 hours
Clustering l	nigh dimensional data Visualizations - Visual data a	nalysis techniques, interaction
techniques;	Systems and applications.	
Module:6	Framework for implementation	6 hours
Man Dadu		NaCOL Databasas C2 Hadaan
	ce Framework - Hadoop – Hive - – Sharding – file systems – Hbase – Impala.	NOSQL Databases - 55 -Hadoop
Module:7	Big Data for E-Commerce	5 hours
Analyzing b	 big data with twitter – Big data for E-commerce – B	g data for blogs.
	8	0
	8	
Module:8	Contemporary issues	2 hours
Module:8	-	2 hours 45 hours

		arallel database [State any assumptions you have ma	11
4.		g Database Link, executing distributed queries	
		are 5 processors working in a parallel environme	ent and producing
		The output record contains campus details ar	
		ation. Implement parallel join and parallel sort alg	
	marks t	from different campus of the university and publish	10 ranks for each
	discipli		
5.	Creatin	g type,varray, nested table and querying it	
	A IImi-	remain wants to treak persons associated with the	m A person cor
		versity wants to track persons associated with the Employee or Student. Employees are Faculty,	-
		associates. Students are Full time students, Part t	

	Teaching Assistants. Design an Enhanced Entity Relationship (EER)	
	Model for university database. Write OQL for the following	
	5. Insert details in each object.	
	6. Display the Employee details.	
	7. Display Student Details.	
	8. Modify person details.	
	Delete person details.	
6.	Active Databases	
	Extend the design of university database by incorporating the following	
	information.	
	Students are registering for courses which are handled by instructor	
	researchers (graduate students). Faculties are advisors to graduate	
	students. Instructor researchers' class is a category with super class of	
	faculty and graduate students. Faculties are having sponsored research	
	projects with a grant supporting instruction researchers. Grants are	
	sanctioned by different agencies. Faculty belongs to different departments.	
	Department is chaired by a faculty. Implement for the Insertion and	
<u> </u>	Display of details in each class.	
7.	Deductive Database	
	Create triggers and assertions for Bank database handling deposits and	
	loan and admission database handling seat allocation and vacancy	
	position. Design the above relational database schema and implement the	
	following triggers and assertions.	
	7. When a deposit is made by a customer, create a trigger for	
	updating customers account and bank account	
	8. When a loan is issued to the customer, create a trigger for updating	
	customer's loan account and bank account.	
	9. Create assertion for bank database so that the total loan amount	
	does not exceed the total balance in the bank.	
	When an admission is made, create a trigger for updating the seat	
	allocation details and vacancy position.	
8.	Designing XML Schema and querying it.	
	Construct a knowledge database for kinship domain (family relations)	
	with facts. Extract the following relations using rules. Parent, Sibling,	
	Brother, Sister, Child, Daughter, Son, Spouse, Wife, husband,	
	Grandparent, Grandchild, Cousin, Aunt and Uncle.	
9.	Design XML Schema for the given company database	
	Department (deptName, deptNo, deptManagerSSN,	
	deptManagerStartDate, deptLocation) Employee (empName, empSSN,	
	empSex, empSalary, empBirthDate, empDeptNo, empSupervisorSSN,	
	empSddress, empWorksOn)	
	Project (projName, projNo, projLocation, projDeptNo, projWorker)	
	Implement the following queries using XQuery and XPath	
	• Retrieve the department name, manager name, and manager	
	salary for every department	
	• Retrieve the employee name, supervisor name and employee	
	salary for each employee who works in the Research	
	Department.	
	• Retrieve the project name, controlling department name,	
	number of employees and total hours worked per week on the	
L		

	<ul> <li>project for each project</li> <li>Retrieve the project number of employees project for each projec on it</li> </ul>	name, controlli and total hours v t with more than	one empl	week on the oyee working

	iteration methods, partition the problem into 16 columns of 16X256 points each, one column for each of the 16 processes. For the multigrid iteration, start with a grid size of 16X16 and increase the grid size by a factor of 2, for every 10 iterations until the maximum grid size is reached. Continue iterations until the solution is obtained.	
3.	Write a parallel program to solve the room temperature distribution problem but by the direct means of Gaussian Elimination and back substitution rather than by iteration. Only the Gaussian elimination need be computed in parallel; the back substitution may be done on one processor. First, determine the elements of the array A of the system of linear equations, Ax=0. Since this array will always have nonzero elements along the diagonal, partial pivoting should be unnecessary. Next, decompose the problem so that 10 consecutive rows are handled by one process.	
4.	You have been commissioned by a major film studio to develop a really fast -morphing package that will change one image into another image. You come up with the idea of having two images, the original image and the final image, and changing each pixel on the original image to become closer and closer to the pixels of the final image in a lock-step SIMD fashion. This method is certainly embarrassingly parallel, although it may not create a very smoothly changing shape. Experiment with the method and demonstrate it to the studio using pictures of actors.	
5.	NASA has given you the task of writing a really fast image-recognition program, fast enough that a Venusian CAT (Commercial Access Transport) is able to capture touchdown sites from topographic images made by the VERMIN satellite while passing over the mapped area at a speed of 1000 km/hour. The VERMIN image maps are of a 5 Km X 5 Km area and have 0.5m resolution both horizontally and in altitude. Appropriate landing sites are areas in which there is a 1.5m maximum altitude variation within a 25m circle. Create sample image maps of imperfect terrain.	
6.	A Nationwide parcel delivery company, is reassessing the placement of its hubs that collect and distribute parcels. Ideally, the hubs should be situated at strategic places across the country to minimize costs and delivery times. You have been commissioned to make a study of possible alternative sites for the hubs and decide to write a parallel program based on genetic algorithms. You assume that the number of parcels being received is directly proportional to the population, and for a first approximation only the major cities are considered. Write the program, developing suitable input data and constraints. One constraint is the number of hubs.	
7.	A recently discovered planetoid, Geometrica, has a most unusual surface. By all available observations the surface can be modeled by the formula H=35,000sin(3 $\Theta$ )sin(2 $\rho$ )+9700cos(10 $\Theta$ )cos(2 $\rho$ )- 800sin(25 $\Theta$ +0.03 $\pi$ )+550cos( $\rho$ +0.2 $\pi$ )	
	Where H is the height above or below sea level, $\Theta$ is the angle in the equatorial plane and $\rho$ is the angle in the polar plane. Write an embarrassingly parallel program to use hill climbing to find the $(\Theta, \rho)$	

position of the highest point above	e sea level on Geor	netrica's si	urface.

The X analysi Univer belong departr the par counse departr	List of Challenging Experiments (I ENT MARK ANALYSIS SYSTEM YZ University has decided to provide web-bas s system for the students in different Engineer sity maintains a database which contains student ing to various colleges. Colleges have various dep nent has at most 4 sets of students studying in differ tricular semester students have got 2 sections th lors are in charge for those classes. Likewise, in nent and colleges, there will be a set of class con the Student Mark Analysis System and have	ed student mark ing colleges. The academic details artments and each erent semesters. If en totally 8 class n each and every unselors who will			

	practical subjects in each semester. Each subject is evaluated for 100 out of which 20 marks for internals and 80 for external. The class counselor's responsibility is to put internal marks out of 20 and collects the external marks which are out of 80 from university after central valuation through university exam correspondent of the college. The class counselor analyses the marks got by the student in every subject based on the criteria. He/She calculates the overall pass percentage of the class and also department overall percentage is calculated. From each department overall percentage, the overall performance of the college is fetched. Based on some criteria, department wise 3 well performed students in every semester are identified and honored. The students can logon to the specified website and can view his/her report card. The students can also apply for revaluation by downloading appropriate form and filling up the details. He/She can send it to the university through university exam correspondent by attaching the printed revaluation form and Demand Draft for the specified amount. If there is a correction/no change in the mark, university will intimate through university exam correspondent. The class counselor then revises/updates the mark analysis that is done for specified class and corresponding details are updated.	
2.	QUIZ SYSTEM	
	ABC Engineering college has decided to provide online quiz system to its student in various streams. The system will comprise of a database containing questions and answers on various subjects under various streams. The student will be able to login to the system through various desktop PCs available in the campus. The student will be able to take up a quiz view his/her performance over a period of time. The student will be able to take a break from a quiz only once for a maximum of 15 minutes. The quiz will comprise of only multiple choice questions. The duration of the quiz will be 1 hour and the student will be asked 50 questions. The system shall provide immediate feedback to the student whether he/she has passed or failed in the attempt based on the criteria after answering all questions. The individual lecturers will be responsible for generating the questions and answers for the question bank. The lecturers shall enter the moderated questions and answers in the question bank. The lecturers shall also manage their student's details in the system as part of which necessary login and password shall be created. The lecturers can view the performance history of their students and provide feedback to the student in the system. At the end of the semester the lecturers shall print a consolidated performance history of each student and provide it to their student with their comments	
3.	ON-LINE TICKET RESERVATION SYSTEM	
	You have been asked to develop a web based ticket reservation system for the Southern Indian railways. The Southern Indian Railways has approximately around 300 major Railways Stations. The Railways wants to reduce the waiting time of the passengers by automating the ticket reservation process. The passenger will mention their reservation details by writing it in the reservation form to the ticket issuer. On receiving the reservation form from the passenger, the ticket issuer will enter the details in the online ticket issue form by retrieving necessary details from the central database. The ticket issuer checks whether the specified train has enough number of seats, births	

	and requested class in the specified date. Then if all the conditions are fine	
	and if the passenger makes confirmation, the ticket issuer collects the money	
	from the passenger and returns the tickets with relevant information printed	
	on the tickets with balance amount if any. The ticket issuer updates in the	
	central database. The ticket issuer also checks whether the passenger is a	
	senior citizen. If he/she is so, then only 50% of the ticket cost is taken. If the	
	passenger tickets are in waiting list he can keep track of his ticket number	
	and can check his confirmation by browsing Indian railways web site.	
	If the passenger wants to cancel the tickets within 24 hours of journey date	
	his/her cancellation is made and 40% of the ticket cost is returned back. If	
	he/she cancels the ticket before 24 hours of journey only 20% of ticket cost	
	is taken and rest is returned. Then the system allots the cancelled seat/birth	
	to the passenger who is at present in top position in the waiting lists and	
	his/her seat/births confirmed.	
4.	PAYROLL SYSTEM	
	Payroll system is the heart of any human resource system of an organization.	
	The solution has to take care of the calculation of salary based on employee	
	cadre, income tax calculation and various detection to be done from salary	
	including statutory deduction like income tax and provident fund deduction.	
	It has to generate pay slip, check summary and MIS reports.	
	•Some employees work by the hour and they are paid in hourly rate. They	
	submit daily time cards that record the date and number of hours work for	
	the particular charge number. If someone works for more than 8 hours, the	
	company pays them 1.5 times their normal rate for those extra hours.	
	•Some employees are paid a flat salary. Even though they are paid a flat	
	salary, they submit daily time cards that record the date and hours worked.	
	This is so the system can keep track of the hours worked against particular	
	charge numbers.	
	6	
	•Some of the salaried employees also receive a commission based on their	
	sales. They submit purchase orders that reflect the date and amount of the	
	sale. The commission rate is determined for each employee, and is one of	
	10%, 15%, 25% or 35%	
	Employee Information to be maintained.	
	1. personal Information	
	2. Family Information	
	3. Qualification	
	4. Experience	
	5. Health Information	
	6. Bank Account	
	7. Company Information	
	8. Leave Eligibility	
	9. Salary	
	Reports to be Generated	
	1. Pay slip	
	2. Department wise Salary	
	3. Employee wise Salary	
5.	COURSE REGISTRATION SYSTEM	
5.	You have been asked to develop a new Course Registration System for your	
	college. The college wants a web based system to replace its manual system.	
	The college provides education in various streams. In any stream, the entire	

				-			
registration is divided into semesters	5.						
The new system should allow the	e aspirants to su	ubmit the	ir application				
online. Once their applications have	online. Once their applications have been approved and they have been admitted into the college, the system should send an automatic welcome e-						
admitted into the college, the system							
mail along with login id and passwor	rd to the e-mail a	address of	your students.				
The e-mail address is specified as	s part of an ap	plication.	For students				
without any e-mail address, the syst	tem shall print th	ne welcom	e letters to be				
posted. The students would also have	without any e-mail address, the system shall print the welcome letters to be posted. The students would also have selected their stream of interest. Each						
stream will have a set of courses wh	nich are mandator	ry, and a c	ertain number				
of elective courses. These electives							
onwards. The student has to select tw	wo electives.						
The complete list of courses is ma	aintained in the	database.	This database				
belongs to another system and hence							
new system in any manner. The c	database can on	ly be read	d by the new				
system. The beginning of the seme	ester, the head	of the de	partment will				
create necessary class and allocat	tion of lectures	to the c	lasses for his				
department. The HOD may make	e changes in the	e allocatio	on during the				
progress of the course. The system r	maintains the his	story of all	l the professor				
who has conducted a class throughout	ut the semester.						
The lecturer will use the system to u	update the marks	s of the stu	udent (Project,				
Assignment, Internal Test Marks a	and the semeste	er and the	e examination				
marks).the lecturer will also mark	the attendance	of the s	tudent in the				
system. The student can view his	/her marks and	attendanc	e through the				
system.							
In addition to the above, the system	n also keeps tracl	c of reside	ential status of				
the system. The student may be host	teled or a day sch	nolar. If he	e is a hosteled,				
the system will maintain his/her ho	ostels' name, roo	m numbe	r and the fees				
pertaining to the same.

	List of Challenging Experiments (In	dicative)
Create –intera have to	s and Hashes a program that gives a personalized greeting. There a active letter elements to the program itself, so the informa to be static. The method should greet a person as such thello there <u>Bob</u> , my name is <u>Sue</u> .	tion in the greeting will
The fi	rst underlined element should be the value of the in d, while the second should be your global variable va	1 0 1
should	bal is to utilize 1 method call and 1 global variab not be maintained inside of the method. Also, try ay have found during the reading. Comment accordin	to utilize any shortcuts
2. Classe	es and Objects	
vendin initiali	ill need to keep track of the name, cost, vending num g food object. The child classes should be u zation method. Do not ask for the supply count when ill be done later via method calls. Add in attribute rea	itilizing their parent's n creating a new object,

	instantiated variables for testing purposes.	
	Now you need to give Vendor Food the ability to stock an item, which should accept the number of items desired to be added and update the supply accordingly. Next, add in the ability to vend an item via another method call, which depletes the supply by 1 if the supply exists to do so (do nothing otherwise, error handling is not needed yet).	
	Since we are selling items now we should keep track of how much we make, create a sales updater in the Vendor Food class which increments the cost of the vended item to a class variable designated to storing the total sales value. Additionally, create a class method to view the sales information.	
	Lastly, redefine the -to string method in all classes. In the parent class give the basic attribute information, but in the child classes, make sure to call the parent's to string and tack on some text identifying which class the -to string called from.	
3.	Containers, Blocks and Iterations	
	Decided that our current sales log setup is no longer sufficient as it only tells us how much we've sold and with no regard to what was sold. Also, we would like a new way to input our added inventory so we'll update that functionality as well.	
	Since our sales are not itemized, we want to keep an active working array of the items sold. Create a new class variable to contain this array. In the sales updating function add the current Vendor Food object to the sales array.	
	Now that we have an array containing our sold objects (in the order they occurred) we should add a function to save the sales array to a sales log file, for backup purposes. Simply iterate through the array (utilizing block calls) and save the object data (name, cost, vent number) to file in a delimited format. (The $-   -$ symbol is an excellent choice). *You will need to use File.open(filename, $-r+\parallel$ ) and you will need to create an empty log file in the working directory, until we learn more about files. Also, filename.puts $-\parallel$ will write to your file.	
	To aid in the readability of this log file, create 2 log reader functions in the Vendor Food class. The first should output a cleaned up version of the sales log. The second function should receive a snack name or vending number and return the number of times items matching that criteria were sold.	
4.	Regular Expressions and Methods	
	Implement the famous concept, the game of Hangman. The game will be a standalone application driven by user input. The game is only required to run through once per execution	
	Exceptions Handling	

	Input / Output Functions				
	Unit Testing and Debugging				
5.	The objective is to create 4 class Square, Triangle, and Point.	sses, in separate	files, repr	esenting the Circle,

Course code	Course title	L T P J C
SWE3003	Sensor Networks	
Pre-requisite	SWE2002	Syllabus version
		v. 1.0
Course Objective	es:	

- To understand the needs of Wireless Sensor Network in current scenario of technology.
- To explain the principles and characteristics of wireless sensor networks.
- To describe current technology trends for the implementation and deployment of wireless sensor networks.
- To discuss the challenges in designing MAC, routing and transport protocols for wireless sensor networks.
- To understand the tools and operating system for wireless sensor networks.

## **Expected Course Outcome:**

Upon Completion of the course, the students will be able to

- Understand the basic knowledge about wireless sensor networks.
- Design/Architect sensor networks for various applications.
- Analyze various communication models for an energy efficient sensor network.
- Decide an appropriate sensor network topology for the effective network deployment.
- Identify suitable routing protocols for wireless sensor networks.
- Compare various transport layer and congestion control protocols and identify a suitable transport layer protocol for real time applications.
- Solve the problems related to the wireless sensor networks and evaluate the performance of sensor networks and identify bottlenecks.

## Module:1 Sensor technology fundamentals

Sensor, Sensor Characteristics, Sensor Node Architecture, Sensor Network Architecture, Mote Technology, Compare MANET and WSN, Requirement of WSN.

## Module:2 Overview of Wireless Sensor Networks

Challenges for Wireless Sensor Networks-Characteristics requirements-required mechanisms, Difference between mobile ad-hoc and sensor networks, Applications of sensor networks-Enabling Technologies for Wireless Sensor Network.

## Module:3 Wireless Sensor Network Architecture

Single-Node Architecture - Hardware Components, Energy Consumption of Sensor Nodes, Operating Systems and Execution Environments, Network Architecture - Sensor Network Scenarios, Optimization Goals and Figures of Merit, Design Principles of WSN, Gateway Concepts.

## Module:4 Communication Protocols

Physical Layer and Transceiver Design Considerations, MAC Protocols for Wireless Sensor Networks, Low Duty Cycle Protocols, Contentation and Schedule based Protocols, Link-Layer Protocol, Address and Name Management, Assignment of MAC Addresses.

## Module:5 WSN Infrastructure Establishment

Time Synchronization, Localization and Positioning, Topology Control, Transport layer and QoS in WSN, Reliable Data Transport, Congestion and rate control.

45 hours

	List of Challenging Experiments (Indicative)	
1.	Implement a symbol table with functions to create, insert, modify, search, and display.	
2.	Implement pass one of a two pass assembler.	
3.	Implement pass two of a two pass assembler.	
4.	Implement a single pass assembler.	
5.	Implement a two pass macro processor	
6.	Implement a single pass macro processor.	
7.	Implement an absolute loader.	
8.	Implement a relocating loader.	
9.	Implement pass one of a direct-linking loader.	
10.	Implement pass two of a direct-linking loader.	
11.	Implement a simple text editor with features like insertion / deletion of a character, word, and sentence.	
12.	Implement a symbol table with suitable hashing

		2	
Pre-requisite	SWE3002	S	yllabus version
Course Objectiv			v. 1.0
-	an understanding of guidelines, principles, an	d theories influenc	ing Geographic
Information S		la incorres minuene.	ing Geographie
	it the GIS automation and decision making us	ing GIS	
	mation sources available, and be aware of the	ne methodologies an	nd technologies
supporting the	e advances in GIS.		
Expected Course	Autcome		
-	understanding of the subject related concepts a	and of contemporary	vissues
	lge in Map projections	and of concemporary	100000
	patial data models		
	ne data input errors		
	hinking capability		
6. Understand a	nalytical modelling in GIS		
7. Use technique	es, skills to develop new GIS application		
Module:1 Intr	oduction	3 hou	irs
Overview of Geo	graphic Information Systems:- Definition of	a GIS, features and	functions; why
	how GIS is applied; GIS as an Information Sy		
Module:2 Mag	DS	5 hou	irs
Map Projections	and Coordinate Systems:-Characteristics of M	Iaps: Map Scale – C	Classification of
	Geographic Coordinates: Plane Rectangular		
	m – Geographic Coordinate System of Eartl		
Projections – Cor	nmon Map Projections -Properties - Major us	es; Map Projections	: Classification
-Aspects – Viewp	ooints; Georeferencing framework - Geodetic	and Vertical Datum	ns; Relationship
between coordina	te system and Map Projections.		
Module:3 Car	tography and Spatial data modeling	4 hou	ırs
		4 1100	
	S and cartography - Difference between CAD		
	Data Modelling: Introduction – Entity Definiti	on – Spatial Data N	lodels – Spatial
Data Structures: I	Raster data structures – vector data structure		
Module:4 Data	a Input and Editing	3 hor	ırs
	a Input and Editing input: keyboard entry-manual digitizing-aut	3 hou	

transfer - Data editing: Detecting and correcting errors – common errors in spatial data – Reprojection, transformation and generalization – Geocoding address data – Updating and maintaining spatial database [Case study: Ordnance Survey(OS) data collection] - satellite imagery- satellite image resolution and scaling.

## Module:5 Data analysis

5 hours

Measurements in GIS – lengths, perimeters and areas – Queries – Reclassification - Buffering and neighborhood functions- Integrating data – map overlay - Spatial interpolation- Analysis of surfaces - Network analysis.

Module:6Analytical modelling in GIS4 hours
--------------------------------------------

Introduction- Process models- Modelling physical and environmental processes - Modelling human processes- Modelling the decision-making process-Problems with using GIS to model spatial processes.

Data Sources: Internet resources for GIS - Data Resources - Product Information - locating and evaluating data - data formats – ArcGIS software; Database- PostGIS database / ArcGIS supported Databases(Ex. PostgreSQL); Data Quality Issues – Introduction, Describing data quality and errors – Sources of error in GIS – Finding and modeling errors in GIS – Managing GIS error.

			* .						

Module:4	Design Issues in High Performance	5 hours
	Computing:	
Synchroniza	ation, Scheduling, Job Allocation, Job Partitioning	, Dependency Analysis, Mapping
Parallel Alg	gorithms onto Parallel Architectures, Bandwidth L	imitations, Latency Limitations,
Latency Hic	ling/Tolerating Techniques and their limitations.	
Module:5	Performance Evaluation:	6 hours
Performanc	e Analysis of Parallel Algorithms - Basics of Pe	rformance Evaluation, Sources of
Parallel Ov	erhead, Speedup Performance Laws, Scalability 1	netric, Performance Measurement
	ntifying performance bottlenecks, Restructuring	
hierarchies,	Partitioning applications for heterogeneous resour	ces, Using existing libraries, tools
and framew	orks.	
Madular	Compiler Optimization Tashniswas	( hours
Module:6	Compiler Optimization Techniques:	6 hours
•	and Partitioning, Locality: temporal/spatial/stream	
	Computers- Issues in Compiler Transformations,	Dependence Analysis, Data
Dependency	y Reduction. Data flow. Loop reordering.	
Madula.7	Demon Arrene Commuting and Commut	0 1
Module:7	Power-Aware Computing and Current	8 hours

Pedersen, T uide to Great Video Game Design, 2nd Edition,	anology, Cengage Learning, nann, 2005 and Dean Johnson, Fourth Edition, 2012 Cengage Learning PTR; 4th edition, 7 Riders; 2013 Jones & Bartlett Learning;
List of Challenging		
Experiments (Indica	ative)	
can withou	2D game named –Flappy Bird which can fly at hitting a pipe kind of border on its left and particular level, winning note should be displayed	d right side. Once the player

2. Create a 3D game name -Ogrel, where a player has to travel and reach the goal inside a maze without hitting the patrols.

- 3. Create a 3D Bowling game which has 6 pins and a ball by applying the collision detection techniques and calculate the score accordingly.
- 4. Create a game component using MAYA/ Blender software.
- 5. Create a 2D game by extending exercise 1 with multiple levels.
- 6. Create a tile-based game which allows the user to move the player over the tiles.
- 7. Develop a VR game which can trigger the player movements using the click events of VR google card.
- 8. Develop a Tic-Tac-Toe game utilizing only the UI components.
- 9. Develop a Tetris game. It is a single player game where the player has to manipulate blocks that fall down from the top of the screen in such a way that rows on the bottom are filled. When a row is filled, it disappears and the player receives points.
- 10. Develop a 2048 game. It is a single-player sliding block puzzle game. The game's objective is to slide numbered tiles on a grid to combine them to create a tile with the number 2048.

CSE1002	PROBLEM SOLVING AND OBJECT ORIENTED PROGRAMMING		L	Т	Р	J	С
			0	0	6	0	3
Pre-requisite	Nil	Syllabus versio			ion		
		1			1.0		
Course Objectiv	es:						
1. To emphasize t	he benefits of object oriented concepts.						
2. To enable students to solve the real time applications using object oriented programming features							
3.To improve the skills of a logical thinking and to solve the problems using any processing elements							

#### **Expected Course Outcome:**

1. Demonstrate the basics of procedural programming and to represent the real world entities as programming constructs.

2. Enumerate object oriented concepts and translate real-world applications into graphical representations.

3. Demonstrate the usage of classes and objects of the real world entities in applications.

4. Discriminate the reusability and multiple interfaces with same functionality based features to solve complex computing problems.

5. Illustrate possible error-handling constructs for unanticipated states/inputs and to use generic programming constructs to accommodate different datatypes.

6. Validate the program against file inputs towards solving the problem.

#### List of Challenging Experiments (Indicative)

1	l.	Postman Problem	10 hours
		A postman needs to walk down every street in his area in order to deliver the mail. Assume that the distances between the streets along the roads are given. The postman starts at the post office and returns back to the post office after delivering all the mails. Implement an algorithm to help the post man to walk minimum distance for the purpose.	

2.	Budget Allocation for Marketing Campaign	15 hours
	A mobile manufacturing company has got several marketing options such as Radio advertisement campaign, TV non peak hours campaign, City top paper network, Viral marketing campaign, Web advertising. From their previous experience, they have got a statistics about paybacks for each marketing option. Given the marketing budget (rupees in crores) for the current year and details of paybacks for each option, implement an algorithm to determine the amount that shall spent on each marketing option so that the company attains the maximum profit.	
3.	Missionaries and Cannibals	10 hours
	Three missionaries and three cannibals are on one side of a river, along with a boat that can hold one or two people. Implement an algorithm to find a way to get everyone to the other side of the river, without ever leaving a group of missionaries in one place outnumbered by the cannibals in that place.	
4.	Register Allocation Problem	15 hours
	A register is a component of a computer processor that can hold any type of data and can be accessed faster. As registers are faster to access, it is desirable to use them to the maximum so that the code execution is faster. For each code submitted to the processor, a register interference graph (RIG) is constructed. In a RIG, a node represents a temporary variable and an edge is added between two nodes (variables) t1 and t2 if they are live simultaneously at some point in the program. During register allocation, two temporaries can be allocated to the same register if there is no edge connecting them. Given a RIG representing the dependencies between variables in a code, implement an algorithm to determine the number of registers required to store the variables and speed up the code execution	
5.	Selective Job Scheduling Problem	15 hours
	A server is a machine that waits for requests from other machines and responds to them. The purpose of a server is to share hardware and software resources among clients. All the clients submit the jobs to the server for execution and the server may get multiple requests at a time. In such a situation, the server schedule the jobs submitted to it based on some criteria and logic. Each job contains two values namely time and memory required for execution. Assume that there are two servers that schedules jobs based on time and memory. The servers are named as Time Schedule Server and memory Schedule Server respectively. Design a OOP model and implement the time Schedule Server and memory Schedule Server. The Time Schedule Server arranges jobs based on time required for execution in ascending order whereas memory Schedule Server arranges jobs based on memory required for execution in ascending order	
6.	Fragment Assembly in DNA Sequencing	15 hours
	DNA, or deoxyribonucleic acid, is the hereditary material in humans and almost all other organisms. The information in DNA is stored as a code made up of four chemical bases: adenine (A), guanine (G), cytosine (C), and	

	thymine (T). In DNA sequencing, each DNA is sheared into millions of small fragments (reads) which assemble to form a single genomic sequence (superstring). Each read is a small string. In such a fragment assembly, given a set of reads, the objective is to determine the shortest superstring that contains all the reads. For example, given a set of strings, 000, 001, 010, 011, 100, 101, 110, 111 the shortest superstring is 0001110100. Given a set of reads, implement an algorithm to find the shortest superstring that contains all the given reads.					
7.	House Wiring				10 hours	
	An electrician is wiring a house many power points in different lo the distances between them, implicable required.					
		1	otal Lab	oratory Hours	90 hours

<b>D</b>		Syllabus version
Pre-requisite		1.0
<b>Course Objective</b>	S:	
The course gives s	tudents the necessary background to:	
1. Enable stud	dents to read, listen and communicate in Spanish in their day to d	lay life.
2. Enable stud	dents to describe situations by using present, past and future tense	es in Spanish.
	levelop the comprehension skill in Spanish language.	
<b>Expected Course</b>		
The students will b		
1. Create sent POR and P	ences in near future and future tenses and correctly using the pre	positions like
	ences in preterito perfecto and correctly use the direct and indire	ct object pronouns
	ences related to likes and dislikes and also give commands in for	v 1
way		
4. Create sent	ences in past tense by using imperfect and idefinido forms and d	escribe past events
5. Create con	versations in Spanish at places like restaurants, hotels, Shops and	l Railway stations
6. Understand	l about different Spanish speaking countries and its culture and tr	raditions.
	neros (101 – 1 millón). Expresar los planes futuros. Los	7 hours
nun	nerosordinales.	
	nática: Futuros cercanos (Ir+a+Infinitivo). Futuros (Verbos regul	ares e
irregulares).Uso de

	Three reviews with weightage of 25 : 25 : 50 along with reports					
Rec	commended by Board of Studies	15.12.2015				
Ap	proved by Academic Council	39 th ACM	Date	17.12.2015		

At the end of the course, the student will be able to         [1] Identify real life problems related to society         [2] Apply appropriate technology(ies) to address the identified problems using engineering principles and arrive at innovative solutions         Module:1       15 hours         I. Identification of real life problems         2. Field visits can be arranged by the faculty concerned         3. 6 - 10 students can form a team (within the same / different discipline)         4. Minimum of eight hours on self-managed team activity         5. Appropriate scientific methodologies to be utilized to solve the identified issue         6. Solution should be in the form of fabrication/coding/modeling/product design/process design/relevant scientific methodology(ies)         7. Consolidated report to be submitted for assessment         8. Participation, involvement and contribution in group discussions during the contact hours will be used as the modalities for the continuous assessment of the theory component         9. Project outcome to be evaluated in terms of technical, economical, social, environmental, political and demographic feasibility         10. Contribution of each group member to be assessed         11. ## **Digital Logic and Microprocessor**

Simplification of Boolean functions using K-Map – Combinational logic: Adder, subtractor, encoder, decoder, multiplexer, de-multiplexer – Sequential Logic: Flip flops- 8086 Microprocessor: instructions – peripherals: 8255, 8254, 8257.

## **Computer Architecture and Organization**

Instructions - Instruction types- Instruction Formats - Addressing Modes- Pipelining- Data Representation - Memory Hierarchy- Cache memory-Virtual Memory- I/O Fundamentals- I/O Techniques - Direct Memory Access - Interrupts-RAID architecture

#### **Programming, Data Structures and Algorithms**

Programming in C; Algorithm Analysis – Iterative and Recursive Algorithms; ADT - Stack and its Applications - Queue and its Applications; Data Structures – Arrays and Linked Lists; Algorithms - Sorting – Searching; Trees – BST, AVL; Graphs – BFS, DFS, Dijkstra's Shortest Path Algorithm.

## Theory of Computation

Deterministic Finite Automata, Non deterministic Finite Automata, Regular Expressions, Context Free Grammar, Push down Automata and Context Free Languages, Turing Machines.

#### Web Technologies

Web Architecture- JavaScript – objects String, date, Array, Regular Expressions, DHTML-HTML DOM Events; Web Server – HTTP- Request/Response model-RESTful methods- State Management – Cookies, Sessions – AJAX.

## **Operating Systems**

Processes, Threads, Inter-process communication, CPU scheduling, Concurrency and synchronization, Deadlocks, Memory management and Virtual memory & File systems.

## Database Management System

DBMS, Schema, catalog, metadata, data independence, pre-compiler; Users-naïve, sophisticated, casual ;ER Model- Entity, attributes, structural constraints; Relational Model-Constraints, Relational Algebra operations; SQL- DDL, DML, TCL, DCL commands, basic queries and Top N queries; Normalization-properties, 1NF, 2NF, 3NF, BCNF; Indexing-different types, Hash Vs B-tree Index; Transaction-problems, Concurrency Control-techniques, Recovery-methods.

## **Data Communication and Computer Networks**

Circuit Switching, Packet Switching, Frame Relay, Cell Switching, ATM, OSI Reference model, TCP\IP, Network topologies, LAN Technologies, Error detection and correction techniques, Internet protocols, IPv4/IPv6, Routing algorithms, TCP and UDP, Sockets, Congestion control, Application Layer Protocols, Network Security: Basics of public and private key cryptosystems-Digital Signatures and Hash codes, Transport layer security, VPN, Firewalls.

Recommended by Board of Studies 05-03-2016

SWE1904	Masters Thesis	L	T	P	J	C
		0	0	0	0	16
Pre-requisite	As per the academic regulations		Sylla	bus	ver	sion
			1	.0		

**Course Objectives:** 

To provide sufficient hands-on learning experience related to the design, development and analysis of suitable product / process so as to enhance the technical skill sets in the chosen field and also to give research orientation

# **Expected Course Outcome:**

At the end of the course the student will be able to

- 1. Formulate specific problem statements for ill-defined real life problems with reasonable assumptions and constraints.
- 2. Perform literature search and / or patent search in the area of interest.
- 3. Conduct experiments / Design and Analysis / solution iterations and document the results.
- 4. Perform error analysis / benchmarking / costing
- 5. Synthesise the results and arrive at scientific conclusions / products / solution
- 6. Document the results in the form of technical report / presentation

#### Contents

- 1. Capstone Project may be a theoretical analysis, modeling & simulation, experimentation & analysis, prototype design, fabrication of new equipment, correlation and analysis of data, software development, applied research and any other related activities.
- 2. Project can be for two semesters based on the completion of required number of credits as per the academic regulations.
- 3. Should be individual work.
- 4. Carried out inside or outside the university, in any relevant industry or research institution.
- 5. Publications in the peer reviewed journals / International Conferences will be an added advantage

Mode of Evaluation: Periodic reviews, Presentation, Final oral viva, Poster submission
