

SCHOOL OF ELECTRONICS ENGINEERING

M. Tech Biomedical Engineering

Curriculum

(2021-2022 admitted students)

VISION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

Transforming life through excellence in education and research.

MISSION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

World class Education: Excellence in education, grounded in ethics and critical thinking, for improvement of life.

Cutting edge Research: An innovation ecosystem to extend knowledge and solve critical problems.

Impactful People: Happy, accountable, caring and effective workforce and students.

Rewarding Co-creations: Active collaboration with national & international industries & universities for productivity and economic development.

Service to Society: Service to the region and world through knowledge and compassion.

VISION STATEMENT OF THE SCHOOL OF ELECTRONICS ENGINEERING

To be a leader by imparting in-depth knowledge in Electronics Engineering, nurturing engineers, technologists and researchers of highest competence, who would engage in sustainable development to cater the global needs of industry and society.

MISSION STATEMENT OF THE SCHOOL OF ELECTRONICS ENGINEERING

- Create and maintain an environment to excel in teaching, learning and applied research in the fields of electronics, communication engineering and allied disciplines which pioneer for sustainable growth.
- Equip our students with necessary knowledge and skills which enable them to be lifelong learners to solve practical problems and to improve the quality of human life.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

- 1. Graduates will be engineering practitioners and leaders, whowould help solve industry's technological problems
- Graduates will be engineering professionals, innovators or entrepreneurs engaged in technology development, technology deployment, or engineering system implementation in industry
- 3. Graduates will function in their profession with social awareness and responsibility
- 4. Graduates will interact with their peers in other disciplines in industry and society and contribute to the economic growth of the country
- 5. Graduates will be successful in pursuing higher studies in engineering or management
- 6. Graduates will pursue career paths in teaching or research

PROGRAMME OUTCOMES (POs)

PO_01: Having an ability to apply mathematics and science in engineering applications.

PO_02: Having an ability to design a component or a product applying all the relevant standards and with realistic constraints, including public health, safety, culture, society and environment

PO_03: Having an ability to design and conduct experiments, as well as to analyse and interpret data, and synthesis of information

PO_04: Having an ability to use techniques, skills, resources and modern engineering and IT tools necessary for engineering practice

PO_05: Having problem solving ability- to assess social issues (societal, health, safety, legal and cultural) and engineering problems

PO_06: Having adaptive thinking and adaptability in relation to environmental context and sustainable development

PO_07: Having a clear understanding of professional and ethical responsibility

PO_08: Having a good cognitive load management skills related to project management and finance

PROGRAMME SPECIFIC OUTCOMES (PSOs)

On completion of M. Tech. (Biomedical Engineering) programme, graduates will be able to

- PSO1: Apply advanced concepts of Biomedical Engineering to design and develop components and systems for health care applications
- PSO2: Use state-of-art hardware and software tools to design experiments in medical electronic systems for the benefit of society.
- PSO3: To exhibit independent, and collaborative research with strategic planning, while demonstrating the professional and ethical responsibilities of the engineering profession.

CREDIT STRUCTURE

Category-wise Credit distribution

Category	Credits
University core (UC)	27
Programme core (PC)	19
Programme elective (PE)	18
University elective (UE)	06
Bridge course (BC)	-
Total credits	70

DETAILED CURRICULUM

University Core - 27

S. No.	Course Code	Course Title	L	Т	Р	J	C
1.	MAT6001	Advanced Statistical Methods	2	0	2	0	3
2.	ENG5001 and ENG5002 or GER5001	Technical English I and Technical English II (or) Deutsch fuer Anfaeger	{0 0 2	0 0 0	2 2 0	0 0} 0	2
3.	STS5001 & STS5002	Soft skills	0	0	0	0	2
4.	SET5001	SET Project-I	0	0	0	0	2
5.	SET5002	SET Project-II	0	0	0	0	2
6.	ECE6099	Master's Thesis	0	0	0	0	16

Programme Core - 19

S. No.	Course Code	Course Title	L	Т	Р	J	C
1.	BIT5010	Anatomy & Physiology (Bridge Course)	1	0	0	0	NA
2.	ECE5000	Basic Electronics & Measurements (Bridge Course)	1	0	0	0	NA
3.	ECE5046	Biomedical Sensors an Data Acquisition Techniques	2	0	2	4	4
4.	ECE5047	Bio-signal Processing and Analysis	3	0	2	0	4
5.	ECE5048	Embedded Systems and IoT for Biomedical Applications	3	0	0	4	4
6.	ECE5052	Medical Image Processing	2	0	2	4	4
7.	ECE6040	Biomedical Equipment	3	0	0	0	3

Programme Elective - 18

S. No.	Course Code	Course Title	L	Т	Р	J	С
1.	BIT5011	Rehabilitation Engineering	2	0	2	0	3
2.	BIT6022	Biomaterials	3	0	0	0	3
3.	BIT6023	Biomechanics	3	0	0	0	3
4.	BIT6024	Health Care Management	3	0	0	0	3

Course Code	Course Title	
BIT5010	ANATOMY AND PHYSIOLOGY (Bridge Course)	1 0 0 0 NA
Prerequisite:	Nil	
_		Syllabus version: 2
Course Object	tives:	
1. To defi	ne the basic concepts of anatomical and physiological termi	inologies relating to
cell, blo	ood components and joints with their functions.	
2. To des	cribe the chemical coordination of human endocrine system	s, hormones and its
function	ns, male and female reproductive organs.	1 1
3. To brus	sh the basics of anatomical and physiological functions of cal	diovascular system,
biood p	are and gaseous exchange	, and mechanism of
4 To disc	uss about the human Nervous system physiology and termino	logies involved in it
Functio	ns of brain, vision, hearing, taste and smell. Urinary System,	functions of kidney
and ur	ine formation Functions and absorption property of digest	tive system and its
movem	ent.	5
Expected Cou	rse Outcomes:	
The students w	ill be able to:	
1. Compre	ehend the basic concepts of human cell and its organelles, g	eneral physiological
concept	s, primary tissues and organ systems of the human body	1 1
2. Ability	to understand the basic physiological function about endocrine	, digestive and
3 Conceiu	ory system.	n
4 Perceiv	e the concepts about the body fluids and its circulatory pathway	vs in human body
5. Envisas	the basic concepts on the human body mechanics, locomoti	on, bones and joints
involve	d in its movement.	, the state of the
6. Recogn	ize the breathing mechanism, gaseous exchange, human ne	ural system and its
conduct	tion of nerve impulse.	
7. Ability	to understand the necessary information about the human bo	dy mechanism with
its phys	biological functions	
Module 1	Basics of Anatomy and Physiology	2 hours
Introduction to	Human anatomy and physiology- Anatomical and medical ter	minology- Structure
of the human c	ell – Four primary tissues, organs and organ systems – Physiol	logy of homeostasis.
Osteology and	joints- Muscles.	25
Module:2	Blood and Body Fluids	2 hours
Body fluids- C	composition and functions of blood- Plasma proteins- Red bloo	d cells, White blood
cells and platel	ets- Blood groups and blood clotting.	
Modular	Endowing and Danuadrating Sustains	^ 1 · · ·
Violule:5	Endocrine and Keproductive Systems	<u>2 nours</u>
concept of he	binone – Types of normones and normone receptors – Ad	drenal modules and
adrenal cortex	- Male reproductive organs and functions of androgons.	Female reproductivo
organs, functio	ns of oestrogen and progesterone	emaie reproductive
	F0	

Module:4	Cardi	ovascular System				2 hours
Structure of t	the hear	t and blood vessels. Condu	cting system	of the	e heart	and electrocardiogram.
Arterial blood	d pressu	re – Factors maintaining blo	od pressure, 1	Facto	rs regul	ating blood pressure.
	1	<u> </u>	1		<u> </u>	0 1
Module:5	Respi	ratory System				1 hours
Organs of res	spiratory	v system – Structure of lungs	s, Mechanics	of bre	eathing,	Lung volume and
capacities- Ti	ransport	of Oxygen in the blood, Tra	ansport of car	bon-d	li-oxide	in the blood
Regulation of	f respira	tion- Hypoxia, Dyspnoea.				
	.	<u> </u>				
Module:6	Nervo	us System and Special Sen	ses			2 hours
Structure of	neuron-	Resting membrane potentia	al and action	poter	ntial, No	euromuscular junction,
Synaptic tran	Smissio	n, Brain and spinal cord, Re	flex arc and	reflex	action,	, Functions of the parts
of the brain –	• v 1sion,	nearing, taste and smell				
Modulo:7	Uring	ry System and Digestive Sy	vetom			3 hours
Structures of		system (malphigian corpus	alas Droving	1 000	volutod	tubula loop of Hapla
and Distal co	urmary nyolute	d tubule) Eurotions of the	kidney Inner	n con rvatio	ns of u	rinary bladder Organs
of digestive s	vstems	- Salivary secretion gastric	secretion and	nanc	reatic s	ecretion Rile secretion
and functions	s of live	: Absorption of food substa	nces. Movem	ents c	of diges	tive tract.
					0	
Module:8	Conte	mporary Issues				1 hour
				-	_	
		Το	tal Lecture:	15	hours	5

		ME	ASUREN	MENT	ГS (]	(Brid	ge Co	ourse)						
Prere	quisite	Nil								Sy	llabı	is V	ersio	n
Cours	se Objectives													
1.	To describe to circuits using diodes, trans	he basic conc g node and me istors and op-	epts of elec esh analysis Amps.	ctrical of s metho	circu od; 7	cuits a To ac	nd to c quaint	demons t the stu	strate th Idents v	e anal vith di	ysis (iffere	of D(nt ty _]	C and pes o	l AC f
2.	To elucidate interfacing o	the concepts f 8051 microo	of logic Circontroller.	rcuits,	men	mory	types a	and illu	strate t	ie arc	hitect	ture a	and	
3.	To teach the introduce the	students to cl properties of	assify and p Continuou	perform us and o	m se disci	everal crete t	opera ime Fo	tions of ourier to	f signal ransfor	s; repi n.	resen	t the	signa	ls and
4.	To acquaint	the students w	ith the diff	ferent t	types	es of s	ensors	and tra	ansduce	rs, an	d the	ir		

Expected Course Outcome:

The students will be able to

- 1. Analyze electric circuits using the circuit laws and to comprehend the I-V characteristics of diodes.
- Gains ability to design amplifiers and voltage followers; comprehend the characteristics of op-2. Amps.
- 3. Cognize the various logic circuits and memory types; ability to synthesize logic circuits.
- 4. Comprehend the architecture and instruction sets and programming related to 8051 microcontroller.
- Assimilate the properties of discrete and continuous time Fourier transforms. 5.
- 6. Investigate, design and implement small projects, applying the basics acquired from the types of sensors and transducers

Semiconductor Devices and Circuits Module:1

PN Junctions- Formation of Junction- Physical operation of diode, Contact potential and Space Charge phenomena, I - V Characteristics, Zener diode- Introduction to BJT, FET, MOSFET, amplifiers based on BJT and FET - Ohm's Law - KCL, KVL, Node Voltage Analysis, Mesh Current.

Module:2 **Integrated Circuits**

Op-Amp Fundamentals, Practical Limitations of op-amps, Frequency compensation and stability, Gain bandwidth product, Voltage Follower, Introduction to Instrumentation amplifier.

Module:3 | Digital Systems

Basic Logic Circuit Concepts- Representation of Numerical Data in Binary Form - Combinatorial and Sequential Logic Circuits - Synthesis of Logic Circuits - Computer Organization - Memory Types.

Module:4 | 8051 Microcontroller

Introduction to 8051 microcontroller and it's architecture - Memory organization - Instruction sets and assembly language programming - Programming timers - interrupts - I/O ports and serial port - I/O interfacing.

Course Code				P	J	
ECE5046	BIOMEDICAL SENSORS AND DATA ACQUISITION TECHNIQUES	2	U	2	4	4
Prerequisite	Nil	yllal	ous	Ver	rsic	on
			1.	0		
Course Objective	s:					
1. To relate the	principles of bio potential sensing and electrodes to biomedical app	icatio	ons			
2. To identify	he type of signal conditioning needed and the data acquisition cards	for a	spe	cific	;	
sensor outpu	ıt					
3. To acquaint	the students with the communication standards and PC buses for dat	a acqu	uisi	tion		
4. To introduce	4. To introduce virtual instrumentation and the hardware interfacing.					
Expected Course	Outcome:					
The student will be	e able					
1. Perceive the	origin of bio signals and their measurement					
2. Prescribe a s	sensor type to measure a specific physiological parameter.					
3. Describe the	different Bio signals and their characteristics					
4. Design signs	al conditioning circuit for specific biomedical signal.					
5. Select a type	communication protocol for the given bio signal	çılar.				
7 Develop gra	nhical user interface for biomedical signal acquisition and analysis					
8. Design a pro	principal design interface for biomedical signal dequisition and analysis.					
Module:1 Bioel	ectrodes			4]	ho	urs
Origin of hig po	ptential and its propagation Electrode-electrolyte interface	El	ect	rode	<u>-s</u>	kin
interface. Half-cel	potential Impedance Polarization effects of electrode –	Noi	1-n	olar	iza	ble
electrodes. Types of	of electrodes - Surface. Needle and Micro electrodes and their	equi	val	ent		010
circuits. Recording	problems - Measurement with two electrodes.			•		
Module:2 Physi	ological Transducers			5]	ho	urs
Thermoresistive -	- Thermoelectric – Semiconductor - Piezoelectric senso	rs-]	Ele	ctre	ts	in
Capacitive transdu	cers- Pyroelectric effect – Piezoresistive effect- strain gauge	ges-	Ha	ll E	ffe	ct-
Magnetostrictive e	ffect, SQUID – AC/DC bridges - Temperature compensation.	-				
Module:3 Fund	amentals of Bioelectric Signal Acquisition			21	hor	urs
Introduction to bi	oelectric signals- Configuration and structure- Interface sys	ems-	- R	evie	w	of
quantization in am	plitude and time axis.					
Module:4 Bioan	nplifiers			4]	hot	urs
Need for bio-ampl	ifier - Single ended bio-amplifier, Differential bio-amplifier -	Rig	ht 1	eg (lriv	ven
ECG amplifier- Band-pass filtering, Isolation amplifiers – Transformer and optical isolation -						
Isolated DC amplifier and AC carrier amplifier. Chopper amplifier- Power line interference,						
Macroshock and Microshock, Preventive measures to reduce shock hazards						
Module:5 DAQ	cards			5]	hot	urs
Analog to digital c	conversion and Data acquisition cards- Analog and digital input	ts, C	oui	nter	tin	ner
I/O-accuracy and	dynamic range, Speed vs throughput-Acquisition of general	way	vefe	orm	s a	ınd
biosignals- Issues	in online monitoring- Web-based online monitoring.					

Mo	odule:6	Interface Standards and PC Buses	3 hours

Course Code	Course Title	L	Τ	P	J	С
ECE5047	BIOSIGNAL PROCESSING AND ANALYSIS	3	0	2	0	4
Prerequisite	Nil	Sy	llabı	ıs Ve	ersi	on
				1.1		
Course Objective	es:					
 Compare th To brush th Students ha Interpret th applications 	e basic concepts of signals and analyse time and frequency based tr e basics of digital filters ve to investigate the events in the signals e basic architecture of the DSP processor TMS 320 and its important s.	ansfo	orms entat	ion,		
Expected Course	Outcome:					
 Comprehen To acquaint Comprehen EEG analys To familiari Appreciate Acquaint th 	d and analyse the signals in different statistical methods the transforms enactments on bio signal d the implementations of filters in biosignals is and modelling ize the digital signal processor with its application aspects the operation of processors and its special applications e ECG processing and pattern recognition					
Module:1 Intro	oduction to Biomedical Signal Analysis			3 ł	iou	irs
Introduction to sig	nals - Time domain - Statistical and information theoretic ana	lysis				
		-				
Module:2 Time	e-Frequency Domain Analysis			8 ł	iou	irs
Fourier spectrum applications - W applications - Emp analysis and powe	of biosignals, short-time Fourier transform and spectrogra avelet transform and time frequency analysis - Hilbert pirical mode decomposition and empirical wavelet transform r spectral estimation.	am - trans - coi	DC sforr rrela	CT ar n an tion	nd Id	its its
Module:3 Digit	tal Filters			7 ł	100	irs
Types of artefacts filters, optimal filt	s and noise - Time domain filters, frequency domain filters ering, adaptive filters - Signal decomposition based filtering.	s, no	tch	and	con	nb
Module:4 Even	t Detection and Feature Extraction Techniques			7 ł	101	irs
Signal segmentati theoretic and cross	on - Envelop extraction and analysis, temporal, spectral, stat s spectral features - Waveform complexity.	istica	ıl, in	lform	ati	on
Module:5 Digit	al Signal Processors			51	101	ire
General purpose tools - Implement processors.	DSP processors, architecture, hardware configuration, soft ntation considerations, fixed point DSP processors, floating	tware g poi	e dev int I	velop DSP	me	nt
Module:6 TMS	320 Family of DSP processors			7 ł	100	irs
Architecture - Fu	inctional units - Pipelining-Registers - Linear and Circular ad	ddres	sing	; - Ty	pe	s

of instructions - Sample Programs - Real Time Implementation on DSP processors - Factors to be considered for optimized implementation based on processor architecture: Implementation of simple Real Time Digital Filters, FFT using DSP - Overview of Black Fin Processors.

Module:7Case Studies6 hoursLinear discrimination - detection of motor activity from EMG, Harmonic analysis - Estimation of
heart rate in ECG - Auto-regressive model - Estimation of spectrum of thoughts in EEG -
Mmatched and Wiener filter for filtering in ultrasound.6 hours

Module:8		Contemporary issues:	2 hours
		Total Lecture hours:	45 hours

Mode of	Evalua	ation: CAT, Digital Assignment, Quiz, online courses, Paper	r publication,
Hackathe	on/Make	athon and FAT	
List of C	halleng	ing Experiments (Indicative)	
1.	Acquir	e noisy ECG signal. The sampling rate of the signal is 1,000 l	Hz. 6 hours
	Develo	p a MATLAB program to perform synchronized averaging. Selec	et a
	QRS c	omplex from the signal for use as the template and use a suita	ble
	thresho	old on the cross-correlation function for beat detection. Plot the	
	resultin	ng averaged QRS complex and comment it. Observe the results where	nen
	the thre	eshold on the cross-correlation function is low (0.4) or high (0.95) .	
2.	Record	the EEG signals with spike-and-wave complexes. The sampling r	ate 6 hours
	is 100	Hz per channel. Cut out one spike-and-wave complex from any E	EG
	channe	I and use it as a template. Perform template matching by cro	SS-
	correla	tion or by designing a matched filter. Apply the procedure to	the
	same c	channel from which the template was selected as well as to other	her
	channe	Is. Study the results and explain how they may be used to det	ect
2	spike-a	nd-wave complexes.	in a Channa
3.	Acquir	e the ECG signal which contains a large number of PVCs, include	ing o nours
	episode	es. Apply the Pan-Tompkins procedure to detect and segment es	
	the num	abel each beat as normal of premature by visual inspection. Rec	
	for and	h best. Use a duration of 80 samples (400 ms) spanning the OPS	
	nortion	of each beat to compute FE. The D wave need not be considered	- 1 in
	the pre	sent exercise. Compute the mean and standard deviation of the	FF
	and PD	yalues for the normal heats and the DVCs. Evaluate the variation	of
	the two	ϕ parameters between the two categories of beats	UI
4.	Compu	the the PSDs of a few channels of the EEG in the file eegl-xx.	dat 6 hours

	using Welcl	h's procedure. Study th	e changes in the PSDs	derived with	
	variations in	the window width, the	number of segments avera	aged, and the	
	type of the window used. Compare the results with the PSDs computed				
	using the entire signal in each channel. Discuss the results in terms of the				
	effects of the	e procedures and parame	ters on spectral resolution a	and leakage.	
5.	The file spee	ech.wav contains the spe	ech signal for the word "s	afety" uttered	6 hours
	by a male sp	beaker, sampled at 8 kHz	. The signal has a significa	ant amount of	
	background noise. Develop procedures to segment the signal into voiced,				
	unvoiced, an	nd silence portions usin	g ZCR measures. Compu	te the model	
	based PSD f	for each segment. Compa	are the model PSD with the	ne FFT-based	
	PSD for eac	ch segment. What are th	e advantages and disadva	ntages of the	
	model-based	l PSD in the case of voice	ed and unvoiced sounds?	-	
Total Laboratory Hours				30 hours	
Mode of Evaluation: Continuous assessment and FAT					
Recomm	Recommended by Board of Studies 14.09.2017

Course Code	Course Title	L	Т	Р	J	С
ECE5052	MEDICAL IMAGE PROCESSING	2	0	2	4	4
Prerequisite	Nil	Syl	llabı	us V	ersi	on
						1.0

- 1. To define the principles of image sampling, quantization, enhancement and filtering techniques
- 2. To discover the different image compression methods and morphological based processes and machine learning techniques for image segmentation
- 3. To develop the methods of image registration and visualization for medical applications
- 4. To acquire the student with the techniques of shape analysis and image classification using neural networks for brain computer interface and computer aided diagnosis.

Expected Course Outcome:

The student will be able

- 1. Comprehend image sampling and DFT
- 2. Process the given medical images to enhance them
- 3. Apply compression techniques and morphological operations for segmentation
- 4. Predict a machine learning algorithm on the given image for segmentation
- 5. Register images of different modalities, render their volumes for visualization
- 6. Use neural networks for image classification
- 7. Design and develop algorithms to process and visualize images from different modalities
- 8. Develop algorithms to process and visualize images from different modalities for diagnostic application

Module:1 Image Fundamentals

Image perception- Image model- Image sampling and quantization - 2D DFT and DCT.

Module:2Image Enhancement and Filtering5 hoursImage enhancement- Histogram modelling, Spatial operations - Image restoration, Noise models,
Image degradation model, Wiener filtering, Maximum entropy restoration5 hours

Module:3	Image Compression and Morphological Processing	4 hours
Image comp	pression - Lossy and lossless Compression, Predictive techniques	- Dilation, Erosion,
Open, Close	e, Skeleton operations, Top-hat algorithm - Morphology based segr	nentation

Module:4 Image Segmentation	5 hours			
Machine Learning based segmentation algorithms - Singular Value Deco	omposition (SVD) -			
Principal Component Analysis and its applications - Support Vector Machine and its applications -				
Independent Component Analysis and its application				

Module:5Image Registration and Visualization4 hoursImage Registration - Medical image Fusion, SPECT/CT, MR/CT, PET/CT - Image visualization -
Volume Rendering, Surface rendering and Maximum Intensity Projection4 hours

Module:6	Module:6 Shape Analysis and Image Classification		
Topological	attributes - Shape orientation descriptors, Fourier descriptors, - K	means clustering,	

2 hours

machine learning, Neural Network approaches- Statistical Parametric Mapping in Imaging - Regression analysis

Module:7CAD and Brain Computer Interface4 hoursApplicationsof Computer Aided Design (CAD) - General Linear Model (GLM) and itsapplicationin functional brain mapping - Group analysis using t-test - Computer AidedManufacturing (CAM) in Medical Imaging applications, Patient specific modelling - BrainComputer Interface (BCI) and its applications in Neuroscience

Prerequisite	Nil	Sy	llab	us V	'ersi	ion
				10		

- 1. To define the basic concepts of biomaterials, classification (metals, polymers, and ceramics, bioresorbable and biodegradable materials), different properties on materials used in medicine.
- 2. To describe the basics of in-vitro and in-vivo testing of biomaterials, materials degradation in body fluids and its effects.
- 3. To discuss the various process of wound healing and foreign body response, toxicity levels, blood material interactions and its associated infections.
- 4. To relate the biomaterial standards, Indian and international standards with its specifications.

Expected Course Outcome:

The student will be able to

- 1. Comprehend the basic biomaterials concepts with different classes, properties and standards to be used in healthcare industry.
- 2. Ability to understand the various classification of biomaterials used in medicine, its bulk and surface properties and its wide applications.
- 3. Appreciate the specific properties of biopolymers (synthetic and natural) and ceramics used in healthcare applications.
- 4. Envision the different evaluation methods to analyse the biomaterials under in-vitro and in-vivo environment with its degradation properties.
- 5. Perceive the knowledge on host response to biomaterial, toxic effect and its interactions.
- 6. Ability to understand the significant applications of biomaterials used in contact with the human body.

Module:1 Introduction

History of biomaterials, General Properties of Bio-materials, Classes of materials used in medicine.

Module:2 Properties of materials 6 hours Properties of materials - Bulk and surface properties and their characterization. Mechanical Properties of Biomaterials. Classes of materials used in medicine - Metals, Polymers, Hydrogels Bioresorbable and Biodegradable Materials

Module:3 Metallic and Ceramic biomaterials	/ nours
Stainless steel, Titanium, Alloys, Cardiovascular Orthopaedic and Dental app	lications. Corrosion
of Bio-metals - Types of Valve Prostheses - Cardiac Stent- Bio-Ceramics -	Bio-inert ceramics,
Bio-active ceramics, Biodegradable ceramics, Alumina, Zirconia, Hydroxyapa	tite.

Module:4Polymeric Biomaterials7 hoursTypes of polymers - Sterilization, Structure, Bio-compatibility relationship, Stability, Examples of
polymers used in medicine - Hydrogels and drug delivery systems - Sutures, Adhesives, and
Hydro colloids - Super absorbents - artificial skin and blood.7 hours

Module:5Testing of biomaterials6 hoursIn- vitro and In- vivo assessment of tissue compatibility - Testing of blood-materials interactions -

6 hours

Degradation of materials in the biological environment - Effects of the Biological environment on metals, polymers and ceramics								
inetais, poi	incluis, porymers and corames.							
Module:6	Host react	ions to biomaterials		6 hours				
Inflammation - Wound healing and the Foreign body response - System toxicity and								
Hypersensitivity - Blood coagulation and Blood-material Interactions - Tumorigenesis, Implant								
associated	infection.							
Module: /	Standards	tor Biomaterials		5 hours				
World star	ndards - Indi	an Standards - Specifica	ations - General specifica	ations, Classification of				
Specificati	0118.							
Module:8	Contempo	rary Issues:		2 hours

BIT6023	BIOMECHANICS	3	0	0	0	3
Prerequisite:	Nil	Sy	llab	us V	⁷ ersi	ion
				1.0		

- 1. To recall the mechanical concepts and the laws of fluid dynamics that are applicable in human body and governs the properties of biological fluids.
- 2. To discover and also predict the mechanics of human bones, joints, soft tissues and orthopaedic and cardiovascular implants.
- 3. To estimate human posture, gait during physiological and pathological conditions.
- 4. To model and analyse human body parts using software tools

Expected Outcomes:

The students will be able to

- 1. Ability to apply mechanical concepts to understand the movements of human body
- 2. Differenciate and analyse the laws of fluid dynamics in biological fluids
- 3. Perceive and analyse kinetics and kinematics of human bones and joints
- 4. Ability to understand the mechanics of ligaments, tendons and muscles
- 5. Understand and investigate the orthopaedic and cardiovascular implants
- 6. Classify and examine the posture, gait using software tools
- 7. Ability to choose a suitable software for particular application

Module:1 Introduction to Biomechanics

6 hours

6 hours

Introduction to bio-mechanics, relation between mechanics and Medicine - Newton's laws, stress, strain, shear rate, viscosity - Fluid Mechanics: viscoelasticity, non-Newtonian viscosity, soft tissue mechanics - Mechanical properties of soft biological tissues - Euler equations and Navier Stokes equations.

Module:2 Mechanics and Circulation

Rheology of blood and micro vessels - Dynamics of circulatory system - Turbulence flow around prosthetic heart valves.

Module:3Mechanics of Biological System7 hoursOrthopaedicbiomechanics - Mechanical properties of bones, stress induced bone growth,
kinematics and kinetics of joints - Lubrication of joints, and analysis of force in orthopaedic
implants - Skeletal muscles servo mechanism - Cardio vascular control mechanism - Respiratory
control mechanism.

Module:4	Bio -Solid Mechanics of Hard Tissues	6 hours				
Hard Tissues - Bone structure & composition mechanical properties of bon - Cortical and cancellous bones - Viscoelastic properties, Maxwell and Voight models - anisotropy.						
Module 5	Bio-Solid Mechanics of Soft Tissues	6 hours				

modulete	Dio Sona i	icemanies		bbueb					onours
Soft Tissue	s: Structure,	functions,	material	properties	and	modelling	of soft	tissues -	Cartilage,

Г

Course Code	Course Title	L	Т	Р	J	С
BIT6024	HEALTH CARE MANAGEMENT	3	0	0	0	3
Prerequisite	Nil	Syllabus Version			ion	
		10				

- 1. Introduction to general management principles and basic healthcare application
- 2. Explore on International and national healthcare problems and issues
- 3. Discuss Planning, budgeting and uses of computers and information technology
- 4. To Explore International standards and protocol for hospital management

Expected Course Outcome:

The student will be able

- 1. Basic Management, elements of healthcare management, organizational hierarchy, Introduction to principles of management in Healthcare environment, health ergonomics and related technologies
- 2. Importance of Healthcare service providers, knowledge about the healthcare market in India, important requirement of health care setup system
- 3. Comprehend indian and global healthcare market and organisation structure
- 4. Knowledge of Various hierarchy of hospital system, Role of biomedical engineers
- 5. Communication within the hospital, Orientation and budgeting
- 6. Implementation of Computer and Information Management in Hospitals, software for billing, maintenance of patient records

Module:1 Introduction

7 hours

6hours

6 hours

Principles of Management - Origin of principles of Management, What is management? Henry Fayol's 14 principles of Management, elements of management, organizational hierarchy, Introduction to principles of management in Healthcare environment, health ergonomics.

Module:2 Healthcare Service Providers

Role of the healthcare service providers Conventional hospital setup, types of leadership in healthcare environment, Private clinics, Corporate hospitals.

Module:3 Global and Indian Healthcare Scenario

Global Healthcare Scenario - Global spending on healthcare, WHO Statistics, Global Healthcare Care Market, Medicare, Medicaid, Indian Healthcare Scenario - Indian healthcare system, composition, organizational structure, Indian Healthcare Market, Key Stake Holders, Global players in Indian healthcare market Case studies - USA, India and Singapore.

Module:4	Classification of Hospital Systems	6 hours
General Ho	spital –Specialist Hospital –Teaching – Research, Primary Health	Centre – Their role,
Functions.	Role of Biomedical Engineers, Aspects of Hospital Services-O	utpatient- Inpatient
supportive	emergency, drug and medical supply, Nursing Services, Dietary	services, Transport
services		

Module:5 Hospital Planning

7 hours Orientation, Budgeting, Communication within the hospital and outside the hospitals - Electric power supply for various theatres and rooms, Diesel generator, Stand by power supply- Air

conditioning of important theatres and equipment housings - Water supply requirements & management, Lifts and firefighting equipment's - Sanitation within the hospitals, Laundry services

Module:6Computer and Information Management in Hospitals6 hours

Computer aided hospital management - Application, Administration/Discharge records of patients, Patient billing, Maintenance of patient records and their history - Maintenance of inventory of medicines and drugs – Purchase.

Module:7Hospital Standards and Maintenance5 hoursModule content5

Introduction to ISO - WHO standards, FDA standards, Indian standards for **b**iomedical equipment services, Their purchase, Servicing and maintenance- Keeping intact and throwing the condemned equipment, Training personal for medical equipment, Preventive and periodical maintenance procedures.

ECE5008	MICRO AND NANO FLUIDICS	2	0	0	4	3	
Prerequisite:	Nil	Syllabus Version					
				1.0			
Course Object	ives:						
 Course Objectives: Introduce and discuss the fundamental physics of micro and nano scale fluids and thei hydrodynamics. Comprehend techniques of miniaturization, methods and tools to create microfluidic architectures and discuss various existing microfluidic devices. Discuss and identify the usage of microfluidics in various lab-on-chip and bioreacto applications						eir tor nd	
 Highlig technic Expose Variou Investi microf Design 	 3. Highlighted various existing microfluidic devices and their fabrication technique. 4. Exposure to various microfluidic lab-on-chip applications 5. Various bioreactor based microchips were described to the students. 6. Investigation and comparison with existing techniques of various microfabrication techniques to design vasculature and 3D microchannels. 7. Design and simulation of microfluidic devices and fabrication of the same. 						
Module:1 Fu	indamentals for Microscale and Nanoscale Flow			5	hou	ars	
Fluids and nonfluids, properties of fluids, classification of fluids, Newtonian and Non Newtonian fluids, pressure driven flow, reynolds number, Electrokinetic phenomena, Electric double layer, debye length, coupling species transport and fluid mechanics, Micro channel Resistance, Shear stress, capillary flow, flow through porous media, Diffusion, surface tension, contact angle and Wetting.							
Module:2 H	drodynamics			4	hou	urs	
Introduction to Electrical fields	surface, surface charge, surface energy, Thermodynamics of s, The Navier Strokes equation, Boundary and Initial conditions	surfa pro	aces, blem	Flu s,	ids	in	
Modulo.3 Fo	brigation methods and techniques			1	hor	ire	
Patterning, Pl properties, Fabr	notolithography, Micromachining, Micromolding, Soft lit rication of microfludics channels.	thog	raph	4 /,]	PDN	MS	
Module:4 Mi	crofluidic Devices			3	hoi	irs	
Droplet Microt Micromixers, C	fluids, Active Flow control, Microvalves, Electrically actu	ated	l mi	crov	alve	22.5 28,	

Modul	le:5	Microfluidics Lab on Chip	3 hours
Microf	fluidi	c for Flow cytometry, cell sorting, cell trapping, Cell culture in mi	croenvironment.
Modul	le:6	Bioreactors on Microchips	4 hours
Enzym	e ass	ay and inhibition, Chemical synthesis in microreactors, Sequ	ential reaction and
Paralle	el reac	tion in micro reactors, chemical separation, liquid chromatograph	У
Modul	le:7	3D Vascular Network for Engineered tissues	5 hours
Fabrica	ation,	Microfabrication of vasculature, Materials for 3D Microfluidi	c vasculature, Laser
Micro-	mach	ined 3D channels, Introduction to Comsol Multiphysics, Mather	natical Modeling of
MICTOC	chann	els in Microfludics Model builder.	
Modul	0.8	Contomporary Issue	2 hours
Wittun	10.0	Contemporary issue	2 110015

2. The aim of microfluidic mixing is to achieve a thorough and rapid mixing of multiple samples in microscale devices. Design a device in which, sample mixing is essentially achieved by enhancing the diffusion effect between the different species flows. Analyze the microfluidic mixing schemes such as active, where an external energy force is applied to perturb the sample species, and passive, where the contact area and contact time of the species samples are increased through specially-designed microchannel configurations.

3. Microfluidic bioreactor systems have length scales that are well matched to the physical dimensions of most cells and microorganisms. Due to their small footprint, micro-bioreactor

platforms offer a number of advantages over conventional macroscale systems. Design a bioreactor to predict process variables, such as temperature, pH and partial pressure of oxygen (pO2) within the Microfluidic bioreactor.

4. Blood separation is a strategic preliminary step in preparation for on-chip biological analysis. Design and analyze a microfluidic device based on the principle of particle retention using micro-filter structures with different pore sizes ($10~30\mu$ m) and a micro-well structure to automatically separate Red Blood cells (RBCs), White Blood cells (WBCs), and plasma into different compartments so that blood morphology study can be performed easily.

5. Polydimethylsiloxane is called PDMS, a polymer widely used for the fabrication and prototyping of microfluidic chips. Design a soft lithography mold for rapid prototyping of polydimethylsiloxane (PDMS)-based microfluidic device. Design a microfluidic device with different microfluidic channel heights (50, 100, 200, 500, 1000 and 2000 μ m) considering the other parameters for microfluidic channels were consistent [10 mm (L)×1.5 mm (W) and an inlet and outlet (0.75 mm in diameter)]. Study the flow characteristics of the fabricated microfluidic device.

ECE5050	PHYSIOLOGICAL CONTROL SYSTEMS	2	0	2	0	3
Prerequisite	Nil	Syllabus Version				ion
		1.1				

- 1. To introduce the basic system concepts and differences between an engineering and physiological control systems.
- 2. To acquaint students with different mathematical techniques applied in analysing a system and the various types of nonlinear modelling approaches.
- 3. To teach neuronal membrane dynamics and to understand the procedures for testing, validation and interpretation of physiological models.
- 4. To study the cardiovascular model and apply the modelling methods to multi input and multi output systems.

Expected Course Outcome:

The students will be able to

- 1. Comprehend the basic system concepts and differences between an engineering and physiological control systems.
- 2. Understand the application of various mathematical techniques in designing a bio-control system.
- 3. Analyze a given system in time domain and frequency domain.
- 4. Comprehend the techniques of plotting the responses in both the domain analysis.
- 5. Apply time domain and frequency domain analysis to study the biological systems.
- 6. Identify and optimize the physiological control systems.
- 7. Develop simple models of the physiological control systems and analyze its stability.

Module:1	Introduction to Physiological Control Systems	4 hours			
Introduction	n-Systems Analysis: Fundamental concepts – Physiological contr	ol systems analysis:			
simple exar	nples – Difference between engineering and physiological control s	systems.			
Module:2	Mathematical Modeling	4 hours			
Generalized	system properties - Models with combinations of systems eleme	ents – Linear models			
of physiolog	gical systems – Laplace transform and transfer functions.				
Module:3	Time Domain Analysis of Linear Control Systems	4 hours			
Linearized	Respiratory Mechanics: open loop vs closed loop - Open loop and	closed loop			
Transient R	esponse: First Order Model, Second Order Model - Descriptors	of Impulse and Step			
Responses -	Open loop versus closed loop Dynamics - A Model of Neuromusc	cular Reflex motion.			
Module:4	Frequency Domain Analysis of Linear Control Systems	4 hours			
Steady state	e responses to sinusoidal inputs - Graphical representation of fi	requency response -			
Frequency response of a model of circulatory control - Frequency response of Glucose Insulin					
regulation					

Module:5Stability Analysis4 hoursStability and Transient Response - Root Locus Plots - Routh - Hurwitz Stability Criterion -
Nyquist Criterion for Stability - Relative Stability - Stability Analysis of the Pupillary light Reflex
- Model of Cheyne-Stokes Breathing.4 hours

ECE5051	ARTIFICIAL NEURAL NETWORKS	3	0	0	0	3
Prerequisite	Nil	Syllabus Version			on	
				1.0		

- 1. To study basics of biological Neural Network
- 2. To understand the basics of artificial Neural Network
- 3. To study different pattern recognition task using ANN

Expected Course Outcome:

- 1. Acquire the information about components of biological neurons namely, the dendrites, the axons and the cell body.
- 2. Will be expedient in the concepts and classify the features of fundamental neural network models such as perceptron, McCulloch Pitts, and ADALINE.
- 3. Understand and analysis the mechanism of backpropagation in neural networks along with importance of tuning parameters.
- 4. Elaborate on concepts of Activation and Synaptic dynamics.
- 5. Understand the basics of competitive learning neural network, pattern recognition and pattern mapping.
- 6. Understand the basic gradient search methods, stochastic networks and machine learning based optimization mechanisms.
- 7. Visualize the components of competitive learning neural networks and to differentiate the features of ART models.
- 8. Develop real-time working prototypes of different small-scale and medium-scale artificial neural network based systems to address Engineering challenges.

Module:1 Introduction to ANN

Features, structure and working of Biological Neural Network Trends in Computing Comparison of BNN and ANN

Module:2	Basics of Artificial Neural Networks	7 hours					
History of	History of neural network research, characteristics of neural networks terminology, models of						
neuron Mc	Culloch – Pitts model, Perceptron, Adaline model, Basic learning	s laws, Topology of					
neural netw	ork architecture						
Module:3	Back propagation Networks	7 hours					
Architecture	e of feed forward network, single layer ANN, multilayer perceptro	on, back propagation					
learning, in	put - hidden and output layer computation, backpropagation algo	orithm, applications,					
selection of	tuning parameters in BPN, Numbers of hidden nodes, learning.						
Module:4	Activation & Synaptic Dynamics	5 hours					
Introduction, Activation Dynamics models, synaptic Dynamics models, stability and convergence,							
recall in net	Iral networks.	-					

Module:5Functional units of ANN for Pattern Recognition Tasks:6 hoursBasic feedforward, Basic feedback and basic competitive learning neural network. Pattern
association, pattern classification and pattern mapping tasks.6 hours

6 hours

Module:6	Feedforwa	rd & Feedback Neural I	Networks	5 hours			
Linear responsibility X-OR problem and solution. Analysis of pattern mapping networks							
summary of basic gradient search methods. Pattern storage networks, stochastic networks and							
simulated annealing, Boltzmann machine and Boltzmann learning							
Module:7	Competitiv	ve Learning Neural Netw	works :	7 hours			
Component	s of CL net	work pattern clustering	and feature mapping ne	etwork, ART networks,			
Features of	f ART mod	els, character recognition	on using ART network,	, Pattern classification,			
Recognition	n of Olymp	ic games symbols, Rec	cognition of printed Ch	aracters. Neocognitron,			
Recognition	n of handwrit	tten characters. NET Tall	k: to convert English text	to speech. Recognition			
of consonar	nt vowel (CV) segments, texture classi	fication and segmentation	1.			
Module:8	Contempo	rary issues:		2 hours			
	1						
			Total Lecture hour	rs: 45 hours			
Text Book((s)

House Pvt Ltd., New Delhi, India.							
Mode of Evaluation: CAT, Digital Assignment, Quiz, Online courses (MOOC), paper							
publications, Hackathon/Makeathon and FAT							
Recommend	ded by Board	l of Studies	14.09.2017				
Academic	Council:	No:47	Date	05.10.2017			

Course Code	Course Title	L	Т	P	J	С			
ECE6052	NETWORKING AND INFORMATION SYSTEM IN MEDICINE			0	4	3			
Prerequisite	Nil	Syl	llabı	ıs V	ersi	on			
		v		1.0					
Course Objective									
1. Introduce fu	1. Introduce fundamentals of data communication and principles of multimedia								
2. Discuss the	2. Discuss the overview of available networks for telemedicine								
5. Express the 4 Develop the	basic parts of Tele radiology Systems like Image Acquisition Systems	appii tem	Disn	lav					
System, Cor	munication Network, Interpretation	tenn,	Disp	iuy					
	×								
Expected Course	Outcome:								
1. Comprehens	sive coverage to concepts of Telemedicine								
2. To apply mu 3. Develop a p	infimedia technologies telemedicine	,							
4. Students will	Il acquire a basic knowledge about the hospital at home and remote	e dias	gnost	ics					
5. Understand	the often complex legal, regulatory and reimbursement in telemed	icine							
6. Able to iden	tify and address the sociotechnical factors in telehealth								
Module 1 Intro	duction to Networking			Δ	ho	irs			
Introduction Sys	stem Components Networked Communities Host N	Iana	oem	ent	U	ser			
Management- Apr	blication Level Services. Network Level Services. Principle	s of	Sec	urity	<i>.</i>	501			
Security Implication	ons, and Analytical System Administration.				,				
Module:2 Com	munication Network and Services			4	hou	urs			
Types of informat	tion: Audio, Video, Still Images, Text and data, and Fax	- Ty	pes	of	:				
and Network: Inter	id Network: PS1N, PO1S, A1N, and ISDN - Basic concepts	01 (_om	mun	icati	lon			
	incl, und Whereas communications.								
Module:3 Stand	lards for Data Exchange			4	hou	urs			
Real-time Teleme	dicine. Data Exchange: Network Configuration, circuit and	1 pa	cket	swi	tchi	ng,			
H.320 series (Vide	eo phone based ISBN) T.120, H.324 (Video phone based PS	STN)). Vi	deo					
Conferencing.									
Modulo:4 Hosp	ital Managamant			/	ho	irc			
Need for HMIS (anabilities & Development of HMIS functional area modu	les f	orm	ר ing		IS			
(like Pathology La	b. Blood bank. Pharmacy, Diet planning).	105 1	.0111	mε	1 11 1	10,			
Module:5 Hosp	ital Information System			4	hou	ars			
Maintenance and	development of HMIS-Ideal Features and functionality of	CPR	, De	evelo	pm	ent			
tools for CPR.									
Module:6 Pictu	re Archival Communication Systems (PACS)			5	ho	irs			
Types of image for	prmats, DICOM standard. PACS system: Block diagram. Sto	oring	g &	retri	evin	g			
images, Algorithm	for retrieving images, Compressions and its significance, L	ossl	ess c	lata		0			
Storage and in-house communication, Computer aided diagnosis (CAD), Centralized Database.									

Module:7 Recent Trends in Medical Health	care Management	3 hours						
Impact of Systems on Health Care, Care Providers and Organizations, mobile health care								
technologies.								
Module:8 Contemporary issues		2 hours						
	Total Lecture ho	urs: 30 hours						
Text Book(s)								
1. A.S. Tanenbaum, "Computer Networks", 20	12, 5th Edition, Pearson I	Education, London.						
2. Kenneth R. Ong. "Medical Informatics: Ar	Executive primer", 2015	5. 1 st Edition. HIMSS						
Publishing, Chicago.	,,,,,,,,	,						
Reference Book(s)								
1. Bernard Fong. A.C.M. Fong and C.K.	Li. "Telemedicine Tecl	hnologies: Information						
Technologies in Medicine and Tele-health",	2011, 1 st Edition, Wiley-	Blackwell, New Jersey.						
2. Lazakidu, "Web-based Application in He	althcare and Biomedicir	ne", 2012, 1 st Edition,						
Springer, New York.								
Mode of Evaluation: CAT, Digital Assign	ment, Quiz, Online con	urses (MOOC), paper						
publications, Hackathon/Makeathon and FAT								
Typical Projects:								
1 Design an Electronic Health Record System for a h	ospital and define criteria to	assess the usability of the						
system and its patient portals.		assess the asactiney of the						
2. Evaluate the impact of an Electronic Health Record	d System on Outpatient and	Inpatient Clinical						
Practices.		I ···· I ··· I ···						
3. Design a robust information system to secure the	data in a hospital which is	compliant with the norms						
and standards for safety and quality control.								
4. Propose an integrated model to network the various systems in the different departments in a hospital.								
5. Design an Electronic Prescribing System for a 600 bed super specialty hospital and review its costs and								
benefits.								
Mode of Evaluation: Review I, II, III								
Recommended by Board of Studies	14.09.2017

ECE(052				1	J	2
ECE0055	WIEDICAL KODUTICS	<u>2</u>	U U		4	3
Prerequisite		Sy		$\frac{us}{10}$	ersi	on
				1.0		
Course Objectives	S:					
1. To understar	nd the drives and sensors required for robotics.					
2. To study the	e kinematics, dynamics, motion planning and control of robotics.					
3. To understar	nd the importance of medical automation and medical robotics.					
4. To compare	the various future technologies being proposed.					
P () G						
Expected Course	Outcome:					
The student will be	e able to:					
1. Have an und	erstanding of the basics of robotics					
2. Understand	the kinematics and dynamic involved in design of robotic systems	5				
3. Determine the	ne path and plan a trajectory for a mobile system					
4. Understand	the importance of robotics in the field of surgery.					
5. Identify the	robotic system used for nueorsurgery					
6. Compare rol	potic systems used for cardiovascular interventions					
7. Focus on fut	ure trends on medical robotics.					
Module:1 Drive	s and sensors for robots			4	ho	ars
Pneumatic drives- systems- Image pro and Object recogni	Tactile sensors, Proximity and range sensors, Acoustic sensor processing and analysis - Image data reduction, Segmentation, tion.	ors, ' Fea	Visio ture	on se extra	nson	n

Course Code	Course Title	L	Τ	P	J	С
ECE6054	MEDICAL IMAGING TECHNIQUES	2	0	2	0	3
Prerequisite	Nil	Sy	llab	us V	ersi	ion
				1.1		

- 1. To provide comprehensive understanding of medical image acquisition in different modalities and the historical evolution of these imaging methods.
- 2. To acquaint the students with different reconstruction techniques and noise removal for medical images and to apprise the manipulation of acoustic radiation fields for medical applications
- 3. To relate all the modules employed in magnetic resonance imaging and to demonstrate knowledge, clinical and technical skills and decision-making capabilities with respect to diagnostic imaging
- 4. To investigate the relevant theory to apply imaging principles for 3D visualization.

Expected Course Outcome:

The student will be able

- 1. To comprehend the acquisition techniques involved in different modalities of medical imaging
- 2. To conceive the historical evolution of the imaging methods pertaining to computed tomography
- 3. To excel with different reconstruction techniques and programming techniques for noise removal.
- 4. To manipulate of acoustic radiation fields for diagnostics to be skillful in image generation
- 5. Establish the principle of operation and modules employed in magnetic resonance imaging
- 6. Able to develop decision-making capabilities with respect to diagnostic imaging
- 7. To compare the available processes, validate and interpret the medical images for a given application

Module:1 X-ray Projection Imaging

X-Ray tubes, cooling systems, removal of scatters, Fluoroscopy- construction of image – Intensifier tubes, Angiographic setup, Mammography, Scanning methods, Area detectors - Digital radiology, DSA - Electronic portal imaging - Noise, Artefacts.

Module:2X ray Computed Tomography4 hoursPrinciples of sectional scanning - CT detectors, Helical CT, Multi-slice CT, Cone beam CTimaging methods - Methods of reconstruction- Iterative, Back projection, convolution and Back-
Projection, FDK algorithm - Noise, Artefacts

Module:3Radio Isotopic Imaging4 hoursSPECT- Radiation detectors, Radionuclides for imaging, Gamma ray camera, scanners, Positron
Emission tomography - Iterative reconstruction algorithms, SPECT/CT,PET/CT registration

Module:4 Ultrasonic Systems

Wave propagation and interaction in Biological tissues - Acoustic radiation fields, continuous and pulsed excitation - Transducers and imaging systems - Scanning methods, Imaging Modes, Principles and theory of image generation - lap top style units - Applications

Module:5 Magnetic Resonance Imaging	4 hours
NMR - Principles of MRI, Relaxation processes and their measurements, F	ulse sequencing and
MRimage acquisition, Image reconstruction, Functional MRI, Diffusion imag	ing, EPI.

4 hours

4 hours

Mod	lule:6	Optical and other imaging modalit	ties	3 hours			
Microscopic imaging principle and applications - Optical coherence tomography, principle,							
appl	ications	- Endoscopic image processing and a	applications - Electrical so	ource imaging -			
Electrical impedance tomography - Microwave imaging							
Mod	lule:7	Image processing for medicine		5 hours			
Imag	ge segm	entation - Computational anatomy - F	Registration of multi-moda	ality images - Synthesis			
of pa	of parametric images - Data visualization - Treatment planning
