

# SCHOOL OF ELECTRONICS ENGINEERING

# B. Tech Electronics and Communication Engineering with Specialization in Biomedical Engineering

(B.Tech ECE with Spec in Biomedical Engineering)

Curriculum

(2019-2020 admitted students)

#### VISION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

Transforming life through excellence in education and research.

# MISSION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

**World class Education**: Excellence in education, grounded in ethics and critical thinking, for improvement of life.

**Cutting edge Research**: An innovation ecosystem to extend knowledge and solve critical problems.

**Impactful People**: Happy, accountable, caring and effective workforce and students.

**Rewarding Co-creations**: Active collaboration with national & international industries & universities for productivity and economic development.

**Service to Society**: Service to the region and world through knowledge and compassion.

# VISION STATEMENT OF THE SCHOOL OF ELECTRONICS ENGINEERING

To be a leader by imparting in-depth knowledge in Electronics Engineering, nurturing engineers, technologists and researchers of highest competence, who would engage in sustainable development to cater the global needs of industry and society.

# MISSION STATEMENT OF THE SCHOOL OF ELECTRONICS ENGINEERING

- Create and maintain an environment to excel in teaching, learning and applied research in the fields of electronics, communication engineering and allied disciplines which pioneer for sustainable growth.
- Equip our students with necessary knowledge and skills which enable them to be lifelong learners to solve practical problems and to improve the quality of human life.

## PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

- 1. Graduates will be engineering practitioners and leaders, who would help solve industry's technological problems
- 2. Graduates will be engineering professionals, innovators or entrepreneurs engaged in technology development, technology deployment, or engineering system implementation in industry
- 3. Graduates will function in their profession with social awareness and responsibility
- 4. Graduates will interact with their peers in other disciplines in industry and society and contribute to the economic growth of the country
- 5. Graduates will be successful in pursuing higher studies in engineering or management
- 6. Graduates will pursue career paths in teaching or research

#### **PROGRAMME OUTCOMES (POs)**

- PO\_01: Having an ability to apply mathematics and science in engineering applications.
- PO\_02: Having a clear understanding of the subject related concepts and of contemporary issues and apply them to identify, formulate and analyse complex engineering problems.
- PO\_03: Having an ability to design a component or a product applying all the relevant standards and with realistic constraints, including public health, safety, culture, society and environment
- PO\_04: Having an ability to design and conduct experiments, as well as to analyse and interpret data, and synthesis of information
- PO\_05: Having an ability to use techniques, skills, resources and modern engineering and IT tools necessary for engineering practice
- PO\_06: Having problem solving ability- to assess social issues (societal, health, safety, legal and cultural) and engineering problems
- PO\_07: Having adaptive thinking and adaptability in relation to environmental context and sustainable development
- PO\_08: Having a clear understanding of professional and ethical responsibility
- PO\_09: Having cross cultural competency exhibited by working as a member or in teams
- PO\_10: Having a good working knowledge of communicating in English communication with engineering community and society
- PO\_11: Having a good cognitive load management skills related to project management and finance
- PO\_12: Having interest and recognise the need for independent and lifelong learning

# PROGRAMME SPECIFIC OUTCOMES (PSOs)

On the completion of B.Tech ECE Specialization in Biomedical Engineering degree, Students will be able to

- PSO1. Design and develop variety of biomedical components and systems.
- PSO2. Apply modern engineering tools to solve complex Electronics & Communication Engineering and biomedical problems.

PSO3: Use modern tools and techniques to solve contemporary problems in the field of biomedical engineering.

# **CREDIT STRUCTURE**

#### **Category-wise Credit distribution**

| Category                 | Credits |
|--------------------------|---------|
| University core (UC)     | 53      |
| Programme core (PC)      | 68      |
| Programme elective (PE)  | 27      |
| University elective (UE) | 12      |
| Bridge course (BC)       | -       |
| Total credits            | 160     |

# **DETAILED CURRICULUM**

| Pre-requisite | NIL                                    | Syllabus versi |   |   | rsion |      |
|               |  |                |   | • |       | v1.0 |

- 1. To define the basic concepts of anatomical and physiological terminologies relating to cell, blood components and joints with their functions.
- 2. To describe the chemical coordination of human endocrine systems, hormones and its functions, male and female reproductive organs.
- 3. To brush the basics of anatomical and physiological functions of cardiovascular system, blood pressure with factors affecting it, Human Respiratory system, mechanism of breathing and gaseous exchange.
- 4. To discuss about the human Nervous system, physiology and terminologies involved in it, Functions of brain, vision, hearing, taste and smell, Urinary System, functions of kidney and urine formation Functions and absorption property of digestive system and its movement.

#### **Expected Course Outcome:**

- 1. Comprehend the basic concepts of cell and its organelles, biomolecules and nucleic acids.
- 2. Ability to understand the basic physiological function about endocrine, digestive and circulatory system.
- 3. Comprehend the mechanism about the kidney function and urine formation.
- 4. Comprehend the concepts about the body fluids and its circulatory pathways in human body.
- 5. Comprehend the basic concepts on the human body mechanics, locomotion, bones and joints involved in its movement.
- 6. Comprehend the breathing mechanism, gaseous exchange, human neural system and its conduction of nerve impulse.
- **7.** Ability to understand the necessary information about the human body mechanism with its physiological functions.

#### **Module:1** Cell & Biomolecules

10 hours

An overview of cell, cell theory, cell organelles, cell division, cell envelope and its modifications, Proteins, Polysaccharides, Nucleic acids, DNA, RNA, Enzymes, Metabolism.

#### **Module:2** | Chemical Coordination and Integration

10 hours

Introduction to Endocrine system, Hypothalamus, Pituitary, Pineal, Thyroid, Parathyroid, Thymus, Pancreas, Adrenal, Testis and Ovary.

#### **Module:3** Digestion and Absorption

8 hours

Alimentary canal, digestive glands, digestion of food, absorption of digested products, disorders of digestive system, Urine formation, Ultrafiltration, Kidney function and Diseases.

#### **Module:4** | Breathing and Exchange of Gases

8 hours

Mechanism of breathing, exchange and transport of gases, volumes and capacities, regulation of respiration and respiratory disorders.

#### **Module:5** | **Body fluids and Circulation**

8 hours

Blood, Plasma, Blood groups, Coagulation, Circulatory pathways, Cardiac cycle.

| Module:6                       | <b>Locomotion and Movem</b>                 | ent                 |                          |                        | 7 hours      |  |

| Course Objectives | :  | <u> </u>                |                |   |   |   |     |  |
| 1. To make stud   | lents understand and appreciate the unity of lif | e in all its forms, the | 9              |   |   |   |     |  |
| Implications of   | life style on the environment.                   |                         |                |   |   |   |     |  |

- 2. To understand the various causes for environmental degradation.
- 3. To understand individuals contribution in the environmental pollution.
- 4. To understand the impact of pollution at the global level and also in the local environment.

#### Expected Course Outcome: Students will be able to

- 1. Students will recognize the environmental issues in a problem oriented interdisciplinary perspectives
- 2. Students will understand the key environmental issues, the science behind those problems and potential solutions.
- 3. Students will demonstrate the significance of biodiversity and its preservation
- 4. Students will identify various environmental hazards
- 5. Students will design various methods for the conservation of resources
- 6. Students will formulate action plans for sustainable alternatives that incorporate science, humanity, and social aspects
- 7. Students will have foundational knowledge enabling them to make sound life decisions as well as enter a career in an environmental profession or higher education.

| Module:1  | Environment and Ecosystem  | 7 hours                               |  |  |  |  |  |  |

| Hazardous wast  | e – types and waste management methods.  |                                       |  |  |  |  |  |  |
|   |  |                                       |  |  |  |  |  |  |
| Module:4  | Energy Resources   | 6 hours                               |  |  |  |  |  |  |

Renewable - Non renewable energy resources- Advantages and disadvantages - oil, Natural gas, Coal, Nuclear energy. Energy efficiency and renewable energy. Solar energy, Hydroelectric power, Ocean thermal energy, Wind and geothermal energy. Energy from biomass, solar-Hydrogen revolution.

#### Module:5 **Environmental Impact Assessment**

6 hours

Introduction to environmental impact analysis. EIA guidelines, Notification of Government of India (Environmental Protection Act – Air, water, forest and wild life). Impact assessment Methodologies. Public awareness. Environmental priorities in India.

#### Module:6 **Human Population Change and Environment**

6 hours

Urban environmental problems; Consumerism and waste products; Promotion of economic development – Impact of population age structure – Women and child welfare, Women empowerment. Sustaining human societies: Economics, environment, policies and education.

#### Module:7 **Global Climatic Change and Mitigation**

5 hours

Climate disruption, Green house effect, Ozone layer depletion and Acid rain. Kyoto protocol, Carbon credits, Carbon sequestration methods and Montreal Protocol. Role of Information technology in environment-Case Studies.

#### Module:8 **Contemporary issues**

2 hours

Lecture by Industry Experts

**Total Lecture hours:** 

45 hours

#### **Text Books**

|                    |                            | 1.               |   |   | 1.1 |   |

- 1. To impart technological aspects of applied chemistry
- 2. To lay foundation for practical application of chemistry in engineering aspects

#### **Expected Course Outcomes (CO):** Students will be able to

- 1. Recall and analyze the issues related to impurities in water and their removal methods and apply recent methodologies in water treatment for domestic and industrial usage
- 2. Evaluate the causes of metallic corrosion and apply the methods for corrosion protection of metals
- 3. Evaluate the electrochemical energy storage systems such as lithium batteries, fuel cells and solar cells, and design for usage in electrical and electronic applications
- 4. Assess the quality of different fossil fuels and create an awareness to develop the alternative fuels
- 5. Analyze the properties of different polymers and distinguish the polymers which can be degraded and demonstrate their usefulness
- 6. Apply the theoretical aspects: (a) in assessing the water quality; (b) understanding the construction and working of electrochemical cells; (c) analyzing metals, alloys and soil using instrumental methods; (d) evaluating the viscosity and water absorbing properties of polymeric materials

#### **Module:1** | Water Technology

5 hours

Characteristics of hard water - hardness, DO, TDS in water and their determination - numerical problems in hardness determination by EDTA; Modern techniques of water analysis for industrial use - Disadvantages of hard water in industries.

#### **Module:2** | Water Treatment

8 hours

Water softening methods: - Lime-soda, Zeolite and ion exchange processes and their applications. Specifications of water for domestic use (ICMR and WHO); Unit processes involved in water treatment for municipal supply - Sedimentation with coagulant- Sand Filtration - chlorination; Domestic water purification - Candle filtration- activated carbon filtration; Disinfection methods-Ultrafiltration, UV treatment, Ozonolysis, Reverse Osmosis; Electro dialysis.

#### **Module:3** | Corrosion

6 hours

Dry and wet corrosion - detrimental effects to buildings, machines, devices & decorative art forms, emphasizing Differential aeration, Pitting, Galvanic and Stress corrosion cracking; Factors that enhance corrosion and choice of parameters to mitigate corrosion.

#### **Module:4** | Corrosion Control

4 hours

Corrosion protection - cathodic protection - sacrificial anodic and impressed current protection methods; Advanced protective coatings: electroplating and electroless plating, PVD and CVD.

Alloying for corrosion protection – Basic concepts of Eutectic composition and Eutectic mixtures - Selected examples – Ferrous and non-ferrous alloys.

#### **Module:5** | Electrochemical Energy Systems

6 hours

Brief introduction to conventional primary and secondary batteries; High energy electrochemical

energy systems: Lithium batteries – Primary and secondary, its Chemistry, advantages and applications.

Fuel cells – Polymer membrane fuel cells, Solid-oxide fuel cells- working principles, advantages, applications.

Solar cells – Types – Importance of silicon single crystal, polycrystalline and amorphous silicon solar cells, dye sensitized solar cells - working principles, characteristics and applications.

#### **Module:6** | Fuels and Combustion

8 hours

Calorific value - Definition of LCV, HCV. Measurement of calorific value using bomb calorimeter and Boy's calorimeter including numerical problems.

Controlled combustion of fuels - Air fuel ratio – minimum quantity of air by volume and by weight-Numerical problems-three way catalytic converter- selective catalytic reduction of NO<sub>X</sub>; Knocking in IC engines-Octane and Cetane number - Antiknocking agents.

#### **Module:7** | **Polymers**

6 hours

Difference between thermoplastics and thermosetting plastics; Engineering application of plastics - ABS, PVC, PTFE and Bakelite; Compounding of plastics: moulding of plastics for Car parts, bottle caps (Injection moulding), Pipes, Hoses (Extrusion moulding), Mobile Phone Cases, Battery Trays, (Compression moulding), Fibre reinforced polymers, Composites (Transfer moulding), PET bottles (blow moulding);

Conducting polymers- Polyacetylene- Mechanism of conduction – applications (polymers in sensors, self-cleaning windows)

| Module:8   | Contemporary issues: | 2 hours  |

- 1. To develop broad understanding of computers, programming languages and their generations
- 2. Introduce the essential skills for a logical thinking for problem solving
- 3. To gain expertise in essential skills in programming for problem solving using computer

#### **Expected Course Outcome:**

- 1. Understand the working principle of a computer and identify the purpose of a computer programming language.
- 2. Learn various problem solving approaches and ability to identify an appropriate approach to solve the problem
- 3. Differentiate the programming Language constructs appropriately to solve any problem
- 4. Solve various engineering problems using different data structures
- 5. Able to modulate the given problem using structural approach of programming
- 6. Efficiently handle data using flat files to process and store data for the given problem

|    | of Challenging Experiments (Indicative)   |            |
| 1. | Postman Problem   | 10 hours   |
|    | A postman needs to walk down every street in his area in order to deliver the   |            |
|    | mail. Assume that the distances between the streets along the roads are   |            |
|    | given. The postman starts at the post office and returns back to the post   |            |
|    | office after delivering all the mails. Implement an algorithm to help the post  |            |
|    | man to walk minimum distance for the purpose.   |            |
| 2. | Budget Allocation for Marketing Campaign  | 15 hours   |
|    | A mobile manufacturing company has got several marketing options such as  |            |
|    | Radio advertisement campaign, TV non peak hours campaign, City top  |            |
|    | paper network, Viral marketing campaign, Web advertising. From their  |            |
|    | previous experience, they have got a statistics about paybacks for each   |            |
|    | marketing option. Given the marketing budget (rupees in crores) for the   |            |
|    | current year and details of paybacks for each option, implement an algorithm  |            |
|    | to determine the amount that shall spent on each marketing option so that the   |            |
| _  | company attains the maximum profit.   | 101        |
| 3. | Missionaries and Cannibals  | 10 hours   |
|    | Three missionaries and three cannibals are on one side of a river, along with   |            |
|    | a boat that can hold one or two people. Implement an algorithm to find a  |            |
|    | way to get everyone to the other side of the river, without ever leaving a  |            |
|    | group of missionaries in one place outnumbered by the cannibals in that   |            |
|    | place.  | 4 7 1      |
| 4. | Register Allocation Problem   | 15 hours   |
|    | A register is a component of a computer processor that can hold any type of   |            |
|    | data and can be accessed faster. As registers are faster to access, it is   |            |
|    | desirable to use them to the maximum so that the code execution is faster.  |            |
|    | For each code submitted to the processor, a register interference graph (RIG)   |            |
|    | is constructed. In a RIG, a node represents a temporary variable and an edge  |            |
|    | is added between two nodes (variables) t1 and t2 if they are live   |            |
|    | simultaneously at some point in the program. During register allocation, two  |            |
|    | temporaries can be allocated to the same register if there is no edge   |            |
|    | connecting them. Given a RIG representing the dependencies between variables in a code, implement an algorithm to determine the number of |            |
|    | registers required to store the variables and speed up the code execution   |            |
| 5. | Selective Job Scheduling Problem  | 15 hours   |
| ٥. | Delective Job Delictioning I Tobiciii   | 15 110015  |

|     | <u> </u>   |                     |             |                |          |
|-----|--|---------------------|-------------|----------------|----------|

|               |  | 1.0              |   |    |   |   |

- To help students to identify the need for developing newer technologies for industrial / societal needs
- To train students to propose and implement relevant technology for the development of the prototypes / products
- To make the students learn to the use the methodologies available to assess the developed prototypes / products

#### **Expected Course Outcome:**

At the end of the course, the student will be able to

- [1] Identify real life problems related to society
- [2] Apply appropriate technology(ies) to address the identified problems using engineering principles and arrive at innovative solutions

Module:1 15 hours

- 1. Identification of real life problems
- 2. Field visits can be arranged by the faculty concerned
- 3. 6-10 students can form a team (within the same / different discipline)
- 4. Minimum of eight hours on self-managed team activity
- 5. Appropriate scientific methodologies to be utilized to solve the identified issue
- 6. Solution should be in the form of fabrication/coding/modeling/product design/process design/relevant scientific methodology(ies)
- 7. Consolidated report to be submitted for assessment
- 8. Participation, involvement and contribution in group discussions during the contact hours will be used as the modalities for the continuous assessment of the theory component
- 9. Project outcome to be evaluated in terms of technical, economical, social, environmental, political and demographic feasibility
- 10. Contribution of each group member to be assessed
- 11. The project component to have three reviews with the weightage of 20:30:50

Mode of Evaluation: (No FAT) Continuous Assessment the project done – Mark weightage of 20:30:50 – project report to be submitted, presentation and project reviews

1. Designed to test the students on the electronics and communication engineering concepts, and tools, and the process of identifying and solving engineering problems.

#### **Expected Course Outcome:**

The students will be able to

- 1. Apply knowledge of mathematics, science, and engineering
- 2. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health care and safety, manufacturability, and sustainability.

#### **Module:1** | Networks, Signals and Systems

Network solution methods: nodal and mesh analysis; Network theorems: superposition, Thevenin and Norton's, maximum power transfer; Wye-Delta transformation; Steady state sinusoidal analysis using phasors; Time domain analysis of simple linear circuits; Solution of network equations using Laplace transform; Frequency domain analysis of RLC circuits; Linear 2-port network parameters: driving point and transfer functions; State equations for networks and Network Synthesis (RL,RC,LC and RLC Synthesis): Positive real functions, hurwitz polynomial, foster and cauer forms.

Continuous-time signals: LTI System & Properties, Fourier series and Fourier transform representations, sampling and aliasing concepts and applications; Discrete-time signals: discrete-time Fourier transform (DTFT), DFT, FFT, Z-transform. Interconnection of systems; Filter design concepts, phase and group delay concepts

#### Module:2 | Electronic Devices and Analog Circuits

Energy bands in intrinsic and extrinsic silicon; Carrier transport: diffusion current, drift current, mobility and resistivity; Generation and recombination of carriers; Poisson and continuity equations; P-N junction, Zener diode, BJT, LED, photo diode and solar cell; MOS Transistor Theory: nMOS, pMOS Enhancement Transistor, ideal I-V characteristics, MOS capacitor, C-V characteristics, DC transfer Characteristics of CMOS inverter.

Small signal equivalent circuits of diodes, BJTs and MOSFETs; Simple diode circuits: clipping, clamping and rectifiers; Special diodes, Single-stage BJT and MOSFET amplifiers: biasing, bias stability, mid-frequency small signal analysis and frequency response; BJT and MOSFET amplifiers: multi-stage, differential, feedback, tuned amplifiers, power and operational; Simple opamp circuits; Active filters; Sinusoidal oscillators: criterion for oscillation, single-transistor and op-amp configurations; Function generators, 555 timers, open and closed loop applications of Comparators, Voltage Regulators, regulator protection methods, noise analysis of electronic circuits, PLLs and Data converters.

#### Module:3 | Digital Circuits

Number systems; Combinatorial circuits: Boolean algebra, minimization of functions using Boolean identities and Karnaugh map, logic gates and their static CMOS implementations, arithmetic circuits, code converters, multiplexers, decoders and PLAs; Sequential circuits: latches and flip-flops, counters, shift-registers and finite state machines; Data converters: sample and hold

circuits, ADCs and DACs; Semiconductor memories: ROM, SRAM, DRAM; 8-bit microcontroller (8051): architecture, programming, memory and I/O interfacing.

#### **Module:4** Electromagnetics

Electrostatics; Maxwell's equations: differential and integral forms and their interpretation, boundary conditions, wave equation, Poynting vector; Plane waves and properties: reflection and refraction, polarization, phase and group velocity, propagation through various media, skin depth; Transmission lines: equations, characteristic impedance, impedance matching, S-parameters, Smith chart; Waveguides: modes, boundary conditions, cut-off frequencies, Rader range equvation, Friss formula; Antennas: antenna types, radiation pattern, gain and directivity, return loss, antenna arrays; Wave Propagation, Antenna design considerations-Microstrip and Horn antennas. Basics of radar; Properties and characteristics of light sources (Laser and LED) and detectors; Light propagation in optical fibers.

#### Module:5 | Control Systems

Basic control system components; Feedback principle; Transfer function; Block diagram representation; Signal flow graph; Transient and steady-state analysis of LTI systems; Frequency response; Routh-Hurwitz and Nyquist stability criteria; Bode and root-locus plots; Closed loop control system design by Nichols plot , PID controller design, Lag, lead and lag-lead compensation, States space models, states space equations and solutions, states space methods for controller designs and non-linear control systems and its applications.

#### Module:6 | Communications

Random processes: autocorrelation and power spectral density, properties of white noise, filtering of random signals through LTI systems; Analog communications: amplitude modulation and demodulation, angle modulation and demodulation, spectra of AM and FM, superheterodyne receivers, circuits for analog communications; Information theory: entropy, mutual information and channel capacity theorem. Digital communications: PCM, DPCM, digital modulation schemes, amplitude, phase and frequency shift keying (ASK, PSK, FSK), QAM, MAP and ML decoding, matched filter receiver, calculation of bandwidth, SNR and BER for digital modulation; Fundamentals of error correction, Hamming codes; inter-symbol interference and its mitigation; Wireless Communication: Structure of a Wireless Communication Link, Modulation Techniques: QPSK, MSK, GMSK. Basics of TDMA, FDMA and CDMA.

Mode of Evaluation: Computerized Multiple Choice Questions FAT Examination – 100%

To provide sufficient hands-on learning experience related to the design, development and analysis of suitable product / process so as to enhance the technical skill sets in the chosen field.

#### **Expected Course Outcome:**

At the end of the course the student will be able to

- 1. Formulate specific problem statements for ill-defined real life problems with reasonable assumptions and constraints.
- 2. Perform literature search and / or patent search in the area of interest.
- 3. Conduct experiments / Design and Analysis / solution iterations and document the results.
- 4. Perform error analysis / benchmarking / costing
- 5. Synthesis the results and arrive at scientific conclusions / products / solution
- 6. Document the results in the form of technical report / presentation

#### **Contents**

- 1. Capstone Project may be a theoretical analysis, modeling & simulation, experimentation & analysis, prototype design, fabrication of new equipment, correlation and analysis of data, software development, applied research and any other related activities.
- 2. Project can be for one or two semesters based on the completion of required number of credits as per the academic regulations.
- 3. Can be individual work or a group project, with a maximum of 3 students.
- 4. In case of group projects, the individual project report of each student should specify the individual's contribution to the group project.
- 5. Carried out inside or outside the university, in any relevant industry or research institution.
- 6. Publications in the peer reviewed journals / International Conferences will be an added advantage

- 1. To facilitate effective language skills for academic purposes and real-life situations.
- 2. To enhance students' language and communication with focus on placement skills development.
- 3. To aid students apply language and communication skills in professional reading and reporting.

#### **Expected Course Outcome:**

- 1. Apply language skills with ease in academic and real-life situations.
- 2. Build up a job winning digital foot print and learn to face interviews confidently.
- 3. Develop good interpreting and reporting skills to aid them in research.
- 4. Comprehend language and communication skills in academic and social contexts.
- 5. Acquire vocabulary and learn strategies for error-free communication.

1.1

#### **Course Objectives:**

- 1. To understand and appreciate the ethical issues faced by an individual in profession, society and polity
- 2. To understand the negative health impacts of certain unhealthy behaviors
- 3. To appreciate the need and importance of physical, emotional health and social health

#### **Expected Course Outcome:**

Students will be able to:

- 1. Follow sound morals and ethical values scrupulously to prove as good citizens
- 2. Understand various social problems and learn to act ethically
- 3. Understand the concept of addiction and how it will affect the physical and mental health
- 4. Identify ethical concerns in research and intellectual contexts, including academic integrity, use and citation of sources, the objective presentation of data, and the treatment of human subjects
- 5. Identify the main typologies, characteristics, activities, actors and forms of cybercrime

#### **Module:1** | Being Good and Responsible

5 hours

Gandhian values such as truth and non-violence – Comparative analysis on leaders of past and present – Society's interests versus self-interests - Personal Social Responsibility: Helping the needy, charity and serving the society

#### Module:2 | Social Issues 1

4 hours

Harassment – Types - Prevention of harassment, Violence and Terrorism

#### Module:3 | Social Issues 2

4 hours

Corruption: Ethical values, causes, impact, laws, prevention – Electoral malpractices;

White collar crimes - Tax evasions – Unfair trade practices

#### **Module:4** | **Addiction and Health**

5 hours

Peer pressure - Alcoholism: Ethical values, causes, impact, laws, prevention - Ill effects of smoking - Prevention of Suicides;

Sexual Health: Prevention and impact of pre-marital pregnancy and Sexually Transmitted Diseases

#### **Module:5** Drug Abuse

3 hours

Abuse of different types of legal and illegal drugs: Ethical values, causes, impact, laws and prevention

#### **Module:6** | Personal and Professional Ethics

4 hours

Dishonesty - Stealing - Malpractices in Examinations - Plagiarism

#### **Module:7** | **Abuse of Technologies**

3 hours

Hacking and other cyber crimes, Addiction to mobile phone usage, Video games and Social networking websites

#### **Module:8** | Contemporary issues:

2 hours

- 1. To provide the requisite and relevant background necessary to understand the other important engineering mathematics courses offered for Engineers and Scientists.
- 2. To introduce important topics of applied mathematics, namely Single and Multivariable Calculus and Vector Calculus etc.
- 3. To impart the knowledge of Laplace transform, an important transform technique for Engineers which requires knowledge of integration

#### **Expected Course Outcomes:**

At the end of this course the students should be able to

- 1. apply single variable differentiation and integration to solve applied problems in engineering and find the maxima and minima of functions
- 2. understand basic concepts of Laplace Transforms and solve problems with periodic functions, step functions, impulse functions and convolution
- 3. evaluate partial derivatives, limits, total differentials, Jacobians, Taylor series and optimization problems involving several variables with or without constraints
- 4. evaluate multiple integrals in Cartesian, Polar, Cylindrical and Spherical coordinates.
- 5. understand gradient, directional derivatives, divergence, curl and Greens', Stokes, Gauss theorems
- 6. demonstrate MATLAB code for challenging problems in engineering

#### Module:1 Application of Single Variable Calculus

9 hours

Differentiation- Extrema on an Interval-Rolle's Theorem and the Mean Value Theorem-Increasing and Decreasing functions and First derivative test-Second derivative test-Maxima and Minima-Concavity. Integration-Average function value - Area between curves - Volumes of solids of revolution - Beta and Gamma functions—interrelation

#### **Module:2** Laplace transforms

7 hours

Definition of Laplace transform-Properties-Laplace transform of periodic functions-Laplace transform of unit step function, Impulse function-Inverse Laplace transform-Convolution.

#### **Module:3** Multivariable Calculus

1 hours

Functions of two variables-limits and continuity-partial derivatives –total differential-Jacobian and its properties.

#### **Module:4** Application of Multivariable Calculus

5 hours

Taylor's expansion for two variables-maxima and minima-constrained maxima and minima-Lagrange's multiplier method.

#### **Module:5** Multiple integrals

8 hours

Evaluation of double integrals—change of order of integration—change of variables between Cartesian and polar co-ordinates - Evaluation of triple integrals-change of variables between Cartesian and cylindrical and spherical co-ordinates- evaluation of multiple integrals using gamma and beta functions.

#### **Module:6 Vector Differentiation**

5 hours

Scalar and vector valued functions – gradient, tangent plane–directional derivative-divergence and curl–scalar and vector potentials–Statement of vector identities-Simple problems

Module:7 **Vector Integration** 5 hours line, surface and volume integrals - Statement of Green's, Stoke's and Gauss divergence theorems -verification and evaluation of vector integrals using them. Module:8 **Contemporary Issues:** 2 hours **Industry Expert Lecture Total Lecture hours:** 45 hours Text Book(s) 1. Thomas' Calculus, George B.Thomas, D.Weir and J. Hass, 13<sup>th</sup> edition, Pearson, 2014. 2. Advanced Engineering Mathematics, Erwin Kreyszig, 10<sup>th</sup> Edition, Wiley India, 2015. **Reference Books** 1. Higher Engineering Mathematics, B.S. Grewal, 43<sup>rd</sup> Edition, Khanna Publishers, 2015 2. Higher Engineering Mathematics, John Bird, 6<sup>th</sup> Edition, Elsevier Limited, 2017. 3. Calculus: Early Transcendentals, James Stewart, 8<sup>th</sup> edition, Cengage Learning, 2017. 4. Engineering Mathematics, K.A.Stroud and Dexter J. Booth, 7th Edition, Palgrave Macmillan (2013)**Mode of Evaluation** Digital Assignments, Quiz, Continuous Assessments, Final Assessment Test **List of Challenging Experiments (Indicative)** Introduction to MATLAB through matrices, and general Syntax 2 hours Plotting and visualizing curves and surfaces in MATLAB – Symbolic 2 hours computations using MATLAB Evaluating Extremum of a single variable function 3. 2 hours Understanding integration as Area under the curve 2 hours 5. Evaluation of Volume by Integrals (Solids of Revolution) 2 hours 6. Evaluating maxima and minima of functions of several variables 2 hours 7. Applying Lagrange multiplier optimization method 2 hours Evaluating Volume under surfaces 2 hours 8. 9. Evaluating triple integrals 2 hours Evaluating gradient, curl and divergence 2 hours 10. 11. Evaluating line integrals in vectors 2 hours 12. Applying Green's theorem to real world problems 2 hours **Total Laboratory Hours** 24 hours **Mode of Assessment:** Weekly assessment, Final Assessment Test Recommended by Board of Studies 12-06-2015

To provide students with a framework that will help them choose the appropriate descriptive methods in various data analysis situations.

To analyse distributions and relationship of real-time data.

To apply estimation and testing methods to make inference and modelling techniques for decision making.

# **Expected Course Outcome:**

At the end of the course the student should be able to:

- 1. Compute and interpret descriptive statistics using numerical and graphical techniques.
- 2. Understand the basic concepts of random variables and find an appropriate distribution for analysing data specific to an experiment.
- 3. Apply statistical methods like correlation, regression analysis in analysing, interpreting experimental data.
- 4. Make appropriate decisions using statistical inference that is the central to experimental research.
- 5. Use statistical methodology and tools in reliability engineering problems.
- 6. demonstrate R programming for statistical data

| Introduction to statistics and data analysis-Measures of central tendency –Measures of variability-[Moments-Skewness-Kurtosis (Concepts only)].  Module: 2 Random variables 8 hours  Introduction -random variables-Probability mass Function, distribution and density function - joint Probability distribution and joint density functions- Marginal, conditional distribution and density functions- Mathematical expectation, and its properties Covariance , moment generating function – characteristic function.  Module: 3 Correlation and regression 4 hours  Correlation and Regression – Rank Correlation- Partial and Multiple correlation- Multiple regression.  Module: 4 Probability Distributions 7 hours  Binomial and Poisson distributions – Normal distribution – Gamma distribution – Exponential distribution – Weibull distribution.  Module: 5 Hypothesis Testing I 4 hours |

To enable the students to understand the basics of the latest advancements in Physics viz., Quantum Mechanics, Nanotechnology, Lasers, Electro Magnetic Theory and Fiber Optics.

# **Expected Course Outcome: Students will be able to**

- 1. Comprehend the dual nature of radiation and matter.
- 2. Compute Schrodinger's equations to solve finite and infinite potential problems.
- 3. Analyze quantum ideas at the nanoscale.
- 4. Apply quantum ideas for understanding the operation and working principle of optoelectronic devices.
- 5. Recall the Maxwell's equations in differential and integral form.
- 6. Design the various types of optical fibers for different Engineering applications.
- 7. Explain concept of Lorentz Transformation for Engineering applications.
- 8. Demonstrate the quantum mechanical ideas

# **Module:1** Introduction to Modern Physics

6 hours

Planck's concept (hypothesis), Compton Effect, Particle properties of wave: Matter Waves, Davisson Germer Experiment, Heisenberg Uncertainty Principle, Wave function, and Schrodinger equation (time dependent & independent).

# **Module:2** | Applications of Quantum Physics

5 hours

Particle in a 1-D box (Eigen Value and Eigen Function), 3-D Analysis (Qualitative), Tunneling Effect (Qualitative) (AB 205), Scanning Tunneling Microscope (STM).

#### **Module:3** | Nanophysics

5 hours

Introduction to Nano-materials, Moore's law, Properties of Nano-materials, Quantum confinement, Quantum well, wire & dot, Carbon Nano-tubes (CNT), Applications of nanotechnology in industry.

# **Module:4** | Laser Principles and Engineering Application

6 hours

Laser Characteristics, Spatial and Temporal Coherence, Einstein Coefficient & its significance, Population inversion, Two, three & four level systems, Pumping schemes, Threshold gain coefficient, Components of laser, Nd-YAG, He-Ne, CO2 and Dye laser and their engineering applications.

# **Module:5** | Electromagnetic Theory and its application

6 hours

Physics of Divergence, Gradient and Curl, Qualitative understanding of surface and volume integral, Maxwell Equations (Qualitative), Wave Equation (Derivation), EM Waves, Phase velocity, Group velocity, Group index , Wave guide (Qualitative)

# Module:6 Propagation of EM waves in Optical fibers and Optoelectronic Devices

Light propagation through fibers, Acceptance angle, Numerical Aperture, Types of fibers - step index, graded index, single mode & multimode, Attenuation, Dispersion-intermodal and intramodal. Sources-LED & Laser Diode, Detectors-Photodetectors- PN & PIN - Applications of fiber optics in communication- Endoscopy.

| Module:7 Special Theory of Relativity                                   | 5 hours                   |
|---|---------------------------|
| Frame of reference, Galilean relativity, Postulate of special theory of | relativity, Simultaneity, |
| length contraction and time dilation.                                   |                           |

| Module:8   | Contemporary issues: |                      | 2 hours  |

This course is offered to the students in the 1<sup>st</sup> Year of B.Tech. in order to orient them towards independent, systemic thinking and be innovative.

- 1. To make students confident enough to handle the day to day issues.
- 2. To develop the "Thinking Skill" of the students, especially Creative Thinking Skills
- 3. To train the students to be innovative in all their activities
- 4. To prepare a project report on a socially relevant theme as a solution to the existing issues

# **Expected Course Outcome: Students will be able to**

- 1. Comprehend the various types of thinking skills.
- 2. Explain the innovative and creative ideas.
- 3. Analyze a suitable solution for socially relevant issues

#### **Module:1 A** | **Self Confidence**

1 hour

Understanding self – Johari Window –SWOT Analysis – Self Esteem – Being a contributor – Case Study

**Project :** Exploring self, understanding surrounding, thinking about how s(he) can be a contributor

for the society, Creating a big picture of being an innovator – writing a 1000 words imaginary autobiography of self – Topic "Mr X – the great innovator of 2015" and upload. (4 non-contact hours)

#### Module:1 B | Thinking Skill

1 hour

Thinking and Behaviour – Types of thinking– Concrete – Abstract, Convergent, Divergent, Creative.

Analytical, Sequential and Holistic thinking – Chunking Triangle – Context Grid – Examples – Case Study.

**Project:** Meeting at least 50 people belonging to various strata of life and talk to them / make field visits to identify a min of 100 society related issues, problems for which they need solutions and categories them and upload along with details of people met and lessons learnt. (4 noncontact hours)

# **Module:1 C** | Lateral Thinking Skill

1 hour

Blooms Taxonomy – HOTS – Outof the box thinking – deBono lateral thinking model – Examples

**Project:** Last weeks - incomplete portion to be done and uploaded

#### Module:2 A | Creativity

1 hour

Creativity Models – Walla – Barrons – Koberg & Begnall – Examples

**Project :** Selecting 5 out of 100 issues identified for future work. Criteria based approach for prioritisation, use of statistical tools & upload . (4 non-contact hours)

#### **Module:2 B** | Brainstorming

1 hour

25 brainstorming techniques and examples

**Project:** Brainstorm and come out with as many solutions as possible for the top 5 issues identified & upload. (4 non-contact hours)

#### Module:3 | Mind Mapping

1 hour

Mind Mapping techniques and guidelines. Drawing a mind map

**Project :** Using Mind Maps get another set of solutions forthe next 5 issues (issue 6-10). (4 non-contact hours)

| Systems Thinking essentials - examples - Counter Intuitive condemns   |
|---|
| Project: Select 1 issue / problem for which the possible solutions are available with you. Apply Systems Thinking process and pick up one solution [explanation should be given why the other possible solutions have been left out ]. Go back to the customer and assess the acceptability and upload (4 non- contact hours)  Module:4 B Design Thinking  Design thinking process – Human element of design thinking – case study  Project: Apply design thinking to the selected solution, apply the engineering & scientific tinge to it. Participate in "design week" celebrations upload the weeks learning out come.  Module:5 A Innovation  Difference between Creativity and Innovation – Examples of innovation –Being innovative.  Project: A literature searches on prototyping of your solution finalized. Prepare a prototype model or process and upload (4 non- contact hours)  Module:5 B Blocks for Innovation  Identify Blocks for creativity and innovation – overcoming obstacles – Case Study  Project: Project presentation on problem identification, solution, innovations-expected results – Interim review with PPT presentation (4 non- contact hours)  Module:5 C Innovation Process  1 hour  Steps for Innovation – right climate for innovation  Project: Refining the project, based on the review report and uploading the text (4 non-contact hours)  Module:6 A Innovation in India  1 hour  Stories of 10 Indian innovations  Project: Making the project better with add ons (4 non-contact hours)  Module:6 B JUGAAD Innovation  Frugal and flexible approach to innovation - doing more with less Indian Examples   |

- 1. To impart the basic concepts of data structures and algorithms.
- 2. To assess how the choice of data structures and algorithm design methods impacts the performance of programs.
- **3.** To provide an insight into the intrinsic nature of the problem and to develop software systems of varying complexity.

# **Expected Course Outcome:**

- 1. Evaluating and providing suitable techniques for solving a problem using basic properties of Data Structures.
- 2. Analyse the performance of algorithms using asymptotic notations.
- 3. Demonstrate knowledge of basic data structures and legal operations on them.
- 4. Illustrate different types of algorithmic approaches to problem solving and assess the tradeoffs involved.
- 5. Analyse basic graph algorithms, operations and applications through a structured (well-defined) algorithmic approach.
- 6. Categorize the feasibility and limitations of solutions to real-world problems.
- 7. Provide efficient algorithmic solution to real-world problems.

#### **Module:1** Introduction to Data structures and Algorithms

1 hour

Overview and importance of algorithms and data structures, Stages of algorithm development for solving a problem: Describing the problem, Identifying a suitable technique, Design of an Algorithm, Proof of Correctness of the Algorithm, Computing the time complexity of the Algorithm.

#### Module: 2 | Analysis of Algorithms

3 hours

Asymptotic notations and their significance, Running time of an algorithm, Time-complexity of an algorithm, Performance analysis of an algorithm, Analysis of iterative and recursive algorithms, Master theorem (without proof).

#### Module:3 Data Structures

7 hours

Importance of data structures, Arrays, Stacks, Queues, Linked list, Trees, Hashing table, Binary Search Tree, Heaps.

# Module:4 | Algorithm Design Paradigms

8 hours

Divide and Conquer, Brute force, Greedy, Recursive Backtracking and Dynamic programming.

#### Module:5 Graph Algorithms

4 hours

Breadth First Search (BFS), Depth First Search (DFS), Minimum Spanning Tree (MST), Single Source Shortest Paths.

#### Module:6 | Computational Complexity classes

5 hours

Tractable and Intractable Problems, Decidable and Undecidable problems, Computational complexity Classes: P, NP and NP complete - Cooks Theorem (without proof),3-CNF-SAT Problem, Reduction of 3-CNF-SAT to Clique Problem, Reduction of 3-CNF-SAT to Subset sum problem.

#### Module:7 | Recent Trends

2 hours

Algorithms related to Search Engines

| ECE1004       | CE1004 Signals and Systems       |                  |  |
| Pre-requisite | MAT1001 : Calculus for Engineers | Syllabus version |  |
|               |                                  | 2.0              |  |

- 1. To introduce the students to fundamental signals like unit impulse, unit step, ramp and exponentials and various operations on the signals.
- 2. To acquaint students to static, linear, time invariant, causal and stable systems.
- 3. To introduce the students to the processing of signals through systems using convolution, correlation operations.
- 4. To analyze the systems using Laplace and Z Transform.

#### Expected Course Outcomes:

- 1. Differentiate between various types of signals and understand the implication of operations of signals
- 2. Understand and classify systems based on the impulse response behavior of bothcontinuous time and discrete time systems
- 3. Perform domain transformation from time to frequency and understand the energy distribution as a function of frequency
- 4. Apply Fourier transform for discrete time signals and understand the difference between CTFT and DTFT.
- 5. Usefulness of convolution for analysing the LTI systems and understand the concepts of power spectral density through correlation.
- 6. Solve differential and difference equations with initial conditions using Laplace and Z transforms.
- 7. Design a system based on the concepts of system properties.

# **Course objectives (CoB):**

The course is aimed to

- 1. Acquaint the students with basic concepts and properties of Electrostatics & Magnetostatics.
- 2. Making the students to understand the propagation of EM wave through time varying Maxwell's equations and to analyze the EM Wave propagation in different conducting and dielectric media.
- 3. Making the students to comprehend the concept of transmission and reflection in various transmission lines and to design different transmission lines and matching circuits using Smith chart

#### **Course Outcomes (CO):**

At the end of the course, the student will be able to

- 1. Evaluate and analyze Electric Fields & Electric Potential due to different Charge distributions.
- 2. Compute and analyze magnetic fields in different material media.
- 3. Understand the propagation of EM wave through time varying Maxwell's equations
- 4. Comprehend the EM wave propagation in conducting as well as in dielectric materials.
- 5. Calculate power of an EM wave while propagating through different materials.
- 6. Illustrate the wave mechanism in different transmission lines at high frequencies using transmission line parameters.
- 7. Design Impedance matching circuits using Smith chart.

# Module:1 Electrostatics 6 hours

Coulomb's Law, Electric Fields due to Different Charge Distributions, Gauss Law and Applications, Electrostatic Potential and Equipotential surfaces, Energy Density, Poisson's and Laplace's Equations; Capacitance – Parallel Plate, Coaxial, Spherical Capacitors, Method of Images. Convection and Conduction currents, Continuity Equation, Relaxation Time, Joules Law, Analogy between D and J.

#### Module:2 Magnetostatics 6 hours

Biot-Savart's Law, Ampere's Circuital Law and Applications, Magnetic Flux Density, Maxwell's Two Equations for Magnetostatic Fields, Magnetic Scalar and Vector Potentials, Forces due to Magnetic Fields, Ampere's Force Law, Inductances and Magnetic Energy.

| Module:3 | Maxwell's Equations (Time | 6 hours |
|----------|---------------------------|---------|
|          | Varving Fields)           |         |

Faraday's Law and Transformer emf, Inconsistency of Ampere's Law and Displacement Current Density, Maxwell's Equations in Different Final Forms and Word Statements, Conditions at a Boundary Surface: Dielectric-Dielectric and Dielectric-Conductor Interfaces.

#### Module:4 | EM Wave Characteristics - I | 7 hours

Wave Equations for Conducting and Perfect Dielectric Media, Uniform Plane Waves – Definition, All Relations Between E & H, Sinusoidal Variations, Wave Propagation in Lossless and Conducting Media, Conductors & Dielectrics – Characterization, Wave Propagation in Good Conductors and Good Dielectrics, Polarization, Illustrative Problems.

| Module:5 EM Wave Characteristics – II | 7 hours |  |
|---------------------------------------|---------|--|
|---------------------------------------|---------|--|

Reflection and Refraction of Plane Waves – Normal and Oblique Incidences, for both Perfect Conductor and Perfect Dielectrics, Brewster Angle, Critical Angle and Total Internal Reflection, Surface Impedance, Poynting Vector and Poynting Theorem – Applications, Power Loss in a Plane Conductor, Illustrative Problems.

#### Module:6 Transmission Lines - I 6 hours

Types, Parameters, Transmission Line Equations, Primary & Secondary Constants, Expressions for Characteristic Impedance, Propagation Constant, Phase and Group Velocities, Infinite Line Concepts, Losslessness/Low Loss Characterization, Distortion – Condition for Distortionlessness and Minimum Attenuation, Loading - Types of Loading, Illustrative Problems.

## Module:7 Transmission Lines – II 5 hours

Input Impedance Relations, SC and OC Lines, Reflection Coefficient, VSWR, UHF Lines as Circuit Elements:  $\lambda/4$ ,  $\lambda2$ ,  $\lambda/8$  Lines – Impedance Transformations, Significance of  $Z_{min}$  and  $Z_{max}$  Smith Chart – Configuration and Applications, Single and Double Stub Matching, Illustrative Problems.

Module:8 Contemporary issues: 2 hours

Total Lecture Hours: 45 hours

|               |  |       | 2.0         |

- 1. To understand the use of transfer function models for the analysis of physical systems and to introduce the components of control system.
- 2. To provide adequate knowledge in the time response of systems and steady state error analysis along with the understanding of closed loop and open loop in frequency domain.
- 3. To introduce the design of compensators and controllers for the stability analysis.
- 4. To introduce state variable representation of physical systems and study the effect of state feedback

#### **Expected Course Outcomes:**

- 1. Differentiate real-time applications as open loop or closed loop systems.
- 2. Analyze the system from the transfer function.
- 3. Design of compensators and controllers and find the stability of these control systems.
- 4. Ability to compute steady state and transient response of the different order of the system and also to analyze its error coefficients.
- 5. Analyze the frequency domain response of the control systems.
- 6. Apply various control systems concepts to analyze and find the stability of control systems.
- 7. Analyze the observability of the system in state modeling.

# Module:1 Introduction to Control Systems 3 hours

Basic block diagram of control system, Control schemes – Open loop and closed loop, Applications and scope.

# Module: 2 Mathematical Modeling of Physical Systems 8 hours

Uncertainty, self-information, average information, mutual information and their properties - Entropy and information rate of Markov sources - Information measures of continuous random variables.

# Module:3 | Controller and Compensator Design | 8 hours

Controllers – P, PI, PID controllers, Realization of basic compensators, Cascade compensation in time domain and frequency domain, Feedback compensation, Design of lag, lead, lag-lead series compensator, Introduction to control system components: DC and AC Servo motors, Stepper motor and Synchros.

#### Module:4 | Time Domain Response | 6 hours

Steady state and transient response, Time domain specifications, Types of test inputs, Response of first order and second order systems, Steady state error, error constants, generalized error coefficient.

# Module:5 | Characterization of Systems | 4 hours

Stability – Concept and definition, Poles, Zeros, Order and Type of systems; R-H criteria, Root locus analysis.

#### Module:6 | Frequency Domain Response | 8 hours

Frequency response – Performance specifications in the frequency domain, Phase margin and gain margin, Bode plot, Polar plot and Nyquist plot, Stability analysis in frequency domain.

- 1. To introduce the basic system concepts and differences between an engineering andphysiological control systems.
- 2. To acquaint students with different mathematical techniques applied in analysing a system and the various types of nonlinear modelling approaches.
- 3. To teach neuronal membrane dynamics and to understand the procedures for testing, validationand interpretation of physiological models.
- 4. To study the cardiovascular model and apply the modelling methods to multi input and multioutput systems.

#### Expected Course Outcome:

The student will be able to

- 1. Understand the basic system concepts and differences between an engineering and physiologicalcontrol systems.
- 2. Apply different mathematical techniques to analyze a system.
- 3. Comprehend the various nonlinear modelling approaches.
- 4. Understand the neuronal membrane dynamics.
- 5. Apply the procedures for testing, validation and interpretation of physiological models.
- 6. Comprehend the cardiovascular model.
- 7. Analyse the modelling methods to multi input and multi output systems.

# Module:1 System Modeling in Physiology

5 hours

The problem of system modeling in physiology - Need for modeling - Conceptual and mathematical models — Modeling - experiments and simulation - Feedback control systems - Difference between engineering and physiological control systems.

#### Module:2 Physiological Modeling

5hours

Deductive and Inductive modeling - Characteristics of a reliable physiological model - Modeling a simple reflex - Mathematical modeling.

#### Module:3 Nonlinear Modeling

4hours

System Identification, Model Specification, Model estimation. Types of nonlinear modeling approaches. Non parametric modeling. Volterra and Wiener models. Volterra Kernels. Modeling the vertebrate retina. Analysis of estimation errors.

# Module:4 | Modeling of Neuronal Systems

4 hours

A general model of the nerve membrane - Action potential and synaptic dynamics - Functional integration in the single neuron -Neuronal systems with point process inputs - Conduction in nerve fibres - Voltage clamp experiment - Hodgkin Huxley (H-H) model - Circuit analog of the H-H nerve membrane model.

#### Module:5 Systems Identification in Physiology

4 hours

System characteristics -System parameters - System functional properties -Input characteristics - Experimental considerations -Data preparation -Data consolidation -Model specification and estimation tasks - Model validation and interpretation.

The course is aimed at

- 1. Introducing the concepts of digital and binary systems.
- 2. Enabling design and analysis of combinational and sequential logic circuits.
- 3. Learning basic software tools for the design and implementation of digital circuits and systems.

# **Expected Course Outcome:**

The students will be able to

- 1. Understand the number systems and concepts of digital logic families to delve into its hardware aspects.
- 2. Use Boolean algebra in digital logic circuit design.
- 3. Design and analyze combinational logic and sequential logic digital circuits
- 4. Understand the basic software tools for the design and implementation of digital circuits and systems.
- 5. Design and analyze sequential logic circuits.
- 6. Use Hardware Description Language in the design and implementation of digital circuits, both combinational and sequential.
- 7. Reinforce theory and techniques related to digital circuits and systems through experiments and work on rudimentary projects.

Mode of Evaluation :Continuous assessment test, Digital Assignment, Quiz and Final Assessment Test

|    | t of Challenging Experiments (Indicative)                                       |          |
|----|---|----------|
| 1. | Implementation of Full adder, Full subtractor using MUX/Decoder ICs             | 4 hours  |
|    | (Hardware)  |          |
| 2. | Design of Universal shift register, based on the control input it should        | 6 hours  |
|    | function as anyone of the following shift registers, Serial in Serial out,      |          |
|    | Serial in serial out, Parallel in Parallel out and Parallel in Serial out.      |          |
| 3. | Design 4 bit adder and 4 bit array Multiplier using basic logic gates and       | 6 hours  |
|    | implement the design in Altera FPGA   |          |
| 4. | Design a FSM that has an input w and output z. The machine is a                 | 6 hours  |
|    | sequence detector that produces $z = 1$ when the previous two values of w       |          |
|    | were 00 or 11 otherwise $z = 0$   |          |
| 5. | Design of a circuit that controls the traffic lights at the intersection of two | 8 hours  |
|    | roads. The circuit generates the outputs G1, Y1, R1 and G2, Y2, R2.             |          |
|    | These outputs represent the states of the green, yellow, and red lights,        |          |
|    | respectively, on each road.   |          |
|    | (a) Give an ASM chart that describes the traffic-light controller. Assume       |          |
|    | that two down counters exist, one that is used to measure the t1 delay and      |          |
|    | another that is used to measure t2. Each counter has parallel-load and          |          |
|    | enable inputs. These inputs are used to load an appropriate value               |          |
|    | representing either the t1 or t2 delay and then allow the counter to count      |          |
|    | down to 0. (b) Give an ASM chart for the control circuit for the traffic-       |          |
|    | light controller. (c)Write complete Verilog code for the traffic-light          |          |
|    | controller, including the control circuit from part (a) and counters to         |          |
|    | represent t1 and t2. Use any convenient clock frequency to clock the            |          |
|    | circuit and assume convenient count values to represent t1 andt2. Give          |          |
|    | simulation results that illustrate the operation of your circuit.               |          |
|    | Total Laboratory Hours  | 30 hours |

#### Mode of Evaluation: Continuous assessment test and Final Assessment Test

### **Typical Projects**

- 1. Design a Voting Machine using verilog HDL and implement the system on FPGA. The system should support to add upto ten candidates and should take the number of voters and display the result after providing a passcode
- 2. Design and implement a 7 segment LED matrix based display system, which is developed to display information regularly or the message in scrolling form. The system takes input directly from the keyboard and the typed message is displayed.
- 3. Design a 24 hour Digital Clock that has a format of HH:MM:SS using Verilog HDL Code using counters.
- 4. Design a calculator using verilog HDL which will be able to perform unsigned and signed addition/subtraction, multiplication of unsigned and signed numbers with 8 bit inputs.

- 1. Analysis the operation of BJT, MOSFET, I\_V characteristics and the biasing techniques for BJT based amplifier circuits.
- 2. Discuss the small-signal analysis of amplifier circuits using hybrid models and the frequency response of amplifiers.
- 3. Explore the concept of feedback, types and its application in different amplifier and oscillator circuits.
- 4. Explain the operation of a differential amplifier with dc characteristics and small-signal analysis.

#### **Expected Course Outcome:**

The students will be able to

- 1. Design and analyze the basic characteristics of BJT and MOSFET in different configurations, apply suitable biasing techniques and be able to use hybrid models of BJT and MOSFET.
- 2. Determine the small signal parameters of amplifiers in CE and CS mode using ac equivalent circuits and use it for frequency response.
- 3. Comprehend the need for multistage amplifiers and be able to suggest a suitable configuration forspecific applications.
- 4. Understand the different classes of power amplifier circuits, their designs and power conversionefficiencies.
- 5. Comprehend the feedback concepts, feedback topologies and design of oscillators.
- 6. Determine the dc characteristics of MOSFET differential amplifier, small signal analysis and its frequency response.
- 7. Design and conduct experiments using BJT, MOSFET, to analyze the characteristics and interpret its operation as amplifiers and oscillators.
- 8. Design and implement an idea suitable for a specified application.

#### Module:1 BJT Biasing and BJT amplifiers

4 hours

Operation of BJT, I\_V Characteristics of BJT in CE mode, Q-point, Self Bias-CE,CE amplifier andEmitter follower,hybrid-model of BJT.

#### Module:2 MOSFET Biasing and MOSFET amplifiers

4 hours

Operation of MOSFET (Enhancement mode), DC Characteristics of MOSFET, Self bias of CS mode, CS amplifier and Source follower circuit, hybrid model of MOSFET

#### Module:3 Small signal analysis of amplifiers

3 hours

Small signal analysis of amplifiers in CE mode and CS mode: voltage and current gain, input and output impedance; Frequency response of CE and CS amplifiers.

#### Module:4 Multistage amplifiers

3 hours

Frequency response of a two stage RC coupled amplifier (BJT & MOSFET), bandwidth of cascaded amplifiers, concept of wide band amplifier and Darlington pair.

#### Module:6 Feedback Amplifiers & Oscillators

5 hours

Feedback concept, negative & positive feedback, voltage/current, series/shunt feedback, Barkhausen criterion, Colpitts, Hartley's, Phase shift, Wein bridge and crystal oscillators.

#### Module:5 Power amplifiers

4 hours

- 1. Develop a comprehensive understanding of the technologies behind the embedded systems
- 2. Discover the programming concepts and embedded programming in linux
- 3. Discuss the overview of embedded networking
- 4. Introduce student to the Internet of things (IOT) with interfacing sensors, actuators for portable gadgets.

# **Expected Course Outcome:**

- 1. Gain the basic idea of measurements and the errors associated with measurement
- 2. Differentiate between the types of sensors available
- 3. Select a suitable sensor for a given application
- 4. Apply the knowledge about the measuring instruments to use them more effectively
- 5. Relate the self-generating sensors with passive sensors
- 6. Comprehend the basics of signal conditioning
- 7. Comprehend the operation and characteristics of special measurement systems

#### **Module:1** Introduction to Sensors and Transducers

3 hours

General concepts and terminology of Sensor systems, Transducers classification-sensors and actuators, General input-output configurations, Static and dynamic characteristics of measurement system.

# **Module:2** | Principles of Measurement and Analysis

3 hours

Units and standards, Errors, Functional Elements of a Measurement System and Instruments, Applications and Classification of Instruments, Types of measured Quantities, Measures of Dispersion, Sample deviation and sample mean, Calibration and standard.

#### **Module:3** | Resistive Sensors

4 hours

Resistive sensors- Potentiometers, strain gages (piezo-resistive effect), resistive temperature detectors (RTD), thermistors, magnetoresistors, light dependent resistor (LDR), resistive hygrometers, resistive gas sensors.

#### **Module:4** | Reactive Sensors:

4 hours

Inductive sensors - variable reluctance sensors, Hall effect, Eddy current sensors, Linear variable differential transformers (LVDT), variable transformers, magneto-elastic, magneto-resistive, and magnetostrictive sensors. Capacitive sensors- variable capacitor, differential capacitor.

# **Module:5** | Self generating Sensors:

4 hours

Thermoelectric sensors, piezo-electric sensors, pyroelectric sensors, photovoltaic sensors, electrochemical sensors

Module:6 | Bio-Instrumentation and Sensors for Healthcare

5 hours

| Types of electrophysiological measurements, Electrocardiography (ECG), Electroencephalography (EEG), Electromyography (EMG); The origin of biopotentials, Measurement of biopotentials, Resting and Action Potentials, Propagation of Action Potentials, Examples of biopotential electrodes and signals, Microelectrodes; Introduction to Biosensors. |   |                             |  |  |

| Version            |  | n : |   |   |   |   |
| Course Objectives: |  | 1.1 |   |   |   |   |

The course is aimed at

- 1. Training students in virtual instrumentation tools like Lab View
- 2. Imparting hands on training in developing various analog communication systems
- 3. Imparting the fundamental concepts of Communication in Virtual Instrumentation

#### **Course Outcome:**

At the end of the course the student should be able to

- 1. Code a labview program for Amplitude modulation.
- 2. Demonstrate simulation of Single Sideband Transmission and its characteristics
- 3. Code a labview program for Frequency modulation.
- 4. Analyse the Harmonics of modulated waveforms.
- 5. Design, simulate and analyse Super heterodyne receiver.
- 6. Construct PPM and PWM signals.
- 7. Simulate and carry out a study on TDM and FDM systems.

Task:1 8 hours

Amplitude Modulation and demodulation

- a)Design and analyze the performance of Amplitude Modulation (AM)
  - (i) Time domain
  - (ii) Frequency domain
- b)Analyze and study the significance of modulation index(m) of AM
  - (i) m<1
  - (ii) m=1
  - (iii) m>1

Task:2 8 hours

Single sideband Transmission

- a)Design and analyze the performance of Single Side Band (SSB) Transmission.
- (i) Time domain
- (ii) Frequency domain
- b) Compare and analyze the performance of AM, AM-SSB and VSB.

Task:3 8 hours

Frequency Modulation and demodulation

- a) Design and analyze the performance of FM receiver
- b) Compare and analyze the performance of AM and FM.

Task:4 8 hours

Pulse Modulation Scheme

- a) Design and analyze the performance of Pulse Amplitude Modulation (PAM) and demodulation (To detect the original message signal)
  - b) Using PAM design Pulse Position Modulation (PPM) and detect the original signal.

Task:5 8 hours

Sampling and Quantization

- a) Analyze the performance of Sampling, Quantization and Encoding using
  - (i) Sinusoidal Signal
  - (ii) Random signal (Preferably Voice signal)

Task:6 8 hours

Pulse Code Modulation

- a) Design a system which coverts analog signal into digital and vice versa.
- (i) Sinusoidal signal
- (ii) Voice signal

Task:7 4 hours

- a) Multiplexing Scheme
- (i) Design and analyze the performance of
- (ii) Time Division Multiplexing (TDM)
- (iii) Frequency Division Multiplexing (FDM)

Task:8 8 hours

**Spread Spectrum Communication** 

a) Design the Pseudo Noise (PN) sequence generator (minimum 4 stage shift register) and verify its properties.

Design and analyze the performance of Direct Sequence-Spread Spectrum (DS-SS).

**Total Practical Hours:** | 60 hours

| Course Objectives: |   |              |  |  |

The course is aimed at

- 1. Teaching the students the basic terminologies and concepts of OSI, TCP/IP reference model and functions of various layers.
- 2. Making the students to understand the protocols, design and performance issues associated with the functioning of LANs and WLANs.
- 3. Introducing the students to queuing models and basic concepts of network security.

# **Expected Outcomes:**

At the end of the course, the student will be able to

- 1. Explain the functions of the OSI, TCP/IP reference models and differentiate between various switching techniques and internetworking devices
- 2. Analyze the performance of data link layer protocols, LAN and WLAN standards
- 3. Design subnets using routing techniques
- 4. Demonstrate the functioning of TCP and UDP
- 5. Deduce the performance of queuing models
- 6. Tackle the issues related to network security
- 7. Carry out the analysis the performance of internetworking devices, various LAN, WLAN and routing protocols using simulation tools

The course is aimed at

- 1. Acquainting students with the basic concepts of architecture 8085, 8086 and ARM processors and 8051 microcontroller with its organization and architecture and also the RAM-ROM organization.
- 2. Enabling the students to work with 8051 microcontroller and its instruction set as well programming to accomplish simple tasks about? explain
- 3. Familiarizing about timer, ports, serial communication and peripherals interrupts available in 8051.
- 4. Knowing about the peripherals interfaced with 8051 microcontroller and, various embedded system design for simple applications using 8051 and others. Statement is improper

#### **Course Outcome:**

At the end of the course, the student should be able to

- 1. Know about the various microprocessor and microcontroller architectures
- 2. Understand techniques for accessing data from RAM/ROM of 8051 microcontrollers
- 3. Know about various 8051 instructions and addressing modes for suitably programming the microcontroller for a task.
- 4. Comprehend the operation of timer and ports, peripherals in 8051 with various modes of operation and at different baud rates
- 5. Study about the various 8051 interrupts and their uses.
- 6. Know the methodology to handle data conversion: Analog to Digital (A/D) and viceversa.
- 7. Acquire the overview of various embedded system design using 8051 and other microcontrollers targeting simple applications
- 8. Write efficient codes and be able to interface the hardware with 8051 microcontrollers. Should be able to design a real time project prototypes which includes 8051 as one of the hardware component.

|               |  | v1.0             |   |    |   |   |

- To elaborate the development of biomedical instrumentation and its application in medical field, and the concepts behind measuring the blood pressure, cardiac output and heart sounds.
- 2. To revise the basics of EEG and to introduce the concepts of measuring the brain activity, andto familiarize them with the basic principle, working and design of various automated diagnostic equipment related to ENT and ophthalmology.
- 3. To elaborate the need of Scopy techniques in medical field and to develop the understandingtowards the medical laboratory equipment.
- 4. To deliver the awareness towards shocks and hazards.

#### Expected Outcome:

- 1. To comprehend the development of biomedical instrumentation and its application in medicalfield.
- 2. Excel in measuring the blood pressure, cardiac output and heart sounds and to design smallproducts related to this application.
- 3. To conceive the basics of EEG and the concepts of measuring the brain activity
- 4. To understand the basic principle, working and design of various automated diagnostic equipment related to ENT and ophthalmology.
- 5. Ability to differentiate between different kinds of scopy for several applications.
- 6. To excel in first level trouble shooting for the breakdown happening with the medicallaboratory equipment.
- 7. Ability to plan, design and implement an instrument for medical applications.

# Module:1 Introduction

5 hours

Introduction to Physiological System of Human Body, Development of Biomedical Instrumentation, Man instrument system, Problems encountered in the measurement, Body as a Control System, General constraints in design of medical instrumentation system.

# Module:2 Cardiovascular and respiratory Instrumentation

5 hours

Heart and cardiovascular system-model, Physiological Pressures, Blood pressure measurement, Measurement of heart sounds, Systemic and Pulmonary Circulation, Blood flow measurement, Cardiac output, Measurement of Pulmonary function, ECG, Standard Lead System, Respiratory system-model, Spirometer, Plethysmography.

# Module:3 Nervous System and Instrumentation

4 hours

Neuronal communication system, The organization of the brain, measurements from the nervoussystem, EEG, Standard Lead System, Amplitude and Frequency Bands, Evoked Potential Recording,

Sensory Measurement, Experimental Analysis of Behavior, Biofeedback Instrumentation.

#### Module:4 ENT and Ophthalmic Instrumentation

4 hours

Mechanism of hearing, Measurement of Sound, Basic Audiometer, Pure Tone and Speech Audiometer, Hearing Aids, Optometry, EOG

# Module:5 Endocrine and Urological Instrumentation

4 hours

Endocrine system, Glucometer, ELISA, Endoscope, Cystoscope, Urological system: Nephroscope, Resectoscope, Ureteroscope.

# Module:6 Medical Laboratory Instrumentation

3 hours

Calorimeter, Flame photometer, Spectrophotometer, pH and Blood Gas Analyzer, Auto Analyzer.

# Module:7 | Electrical Safety and Hazards

3 hours

Physiological Effects of Electrical Current, Shock Hazards, Methods of Accident Prevention

# Module:8 Contemporary issues

2 hours

30 hours

**Total Lecture hours:** 

widule.6 | Contemporary issues | 2 hours

#### Text Book

1. Joseph Carr, Brown, Introduction to Biomedical Equipment, Pearson, 2014

#### Reference Books

- 1. Leslie Cromwell, "Biomedical Instrumentation and measurement", PHI, New Delhi, 2015
- John G. Webster, "Medical Instrumentation Application and Design", John Wiley and sons, New York, 2015.
- 3. Khandpur R.S Hand Book of Biomedical Instrumentation Tata McGraw Hill publication, New Delhi, 2014.

#### **Experiments:**

- 1. Recording of Blood Pressure, Heart sounds
- 2. Recording of ECG Signal
- 3. Recording of EMG Signal
- 4. Recording of EEG Signal
- 5. Measurement of pH and conductivity
- 6. Study of Endoscopes
- 7. Measurement of visually evoked potential
- 8. Pulse oximetry

Mode of Evaluation: Theory: Continuous Assessment Test, Quiz, Digital Assignment, Final Assessment Test, Additional Learning (MOOC / Conference, Journal Publications / Make a thon / Project competition and more)

|               |                             | v1.0             |   |   |   |   |

- 1. To discuss the principles of operational amplifiers and the type of signal conditioning needed for a specific sensor output
- 2. To define the principles of analog to digital and digital to analog conversion techniques for data acquisition
- 3. To compare the communication standards, PC buses and the functioning of distributed and standalone loggers used in data acquisition
- 4. To introduce students to virtual instrumentation and the hardware interfacing

#### **Expected Course Outcomes:**

The students will be able to

- 1. Comprehend the principles of operational amplifiers and their applications
- 2. Formulate the type of signal conditioning needed for a specific sensor output
- 3. Analyze the analog to digital and digital to analog conversion techniques
- 4. Identify the communication standards and PC buses for data acquisition
- 5. Discover the functioning of distributed and standalone loggers
- 6. Design the virtual instrumentation and write software for data acquisition from circuits.
- 7. Develop a device to measure physical parameters for specific application

# Module:1 Operational Amplifier and its applications

6 hours

Ideal OPAMP, Differential Amplifier, CMRR, Open & Closed loop circuits, inverting & noninverting amplifiers, voltage follower/buffer circuit. DC characteristics and AC characteristics of op-amp, Adder, comparator, Instrumentation amplifiers and Schmitt trigger.

# Module:2 Design of Signal Conditioning Circuit

5 hours

Signal amplifiers, analog filters, digital and pulse train conditioning, distributed I/O, noise reduction and isolation

# Module:3 Analog to Digital Conversion

4 hours

Introduction to ADC, Sampling and Holding, Quantizing and Encoding, Accuracy of A/Dconverters, Types of A/D converters, Plug-in data acquisition boards- parameter setting- Sampling strategies for multi-channel analog inputs- speed vs throughput.

# Module:4 Digital to Analog Conversion

4 hours

Introduction to DAC, Types of DACs, D/A boards-parameter setting - timing circuitry-output amplifier buffer- bus interface, Digital I/O boards. Counter-timer I/O boards.

#### Module:5 Interface Standards and PC buses

3 hours

RS232, RS422, RS485, GPIB, RJ 11, RJ 45, USB, Firewire; Backplane buses - PCI, PCI-Express, PXI, PXI – Express, VME, VXI; Ethernet –TCP/IP protocols.

# Module:6 Distributed and Stand-alone Loggers

2 hours

Programming and logging data using PCMCIA cards- stand-alone operation- direct and remote connection to host PC, Host software- data loggers vs internal systems

| Mod   | Module:7 Virtual Instrumentation |   | 4 hours                   |

|              |   | v1.0  |                  |   |   |   |

- 1. To discuss digital image fundamentals and image enhancement techniques
- 2. To discover the principles filtering techniques in spatial domain and frequency domain forenhancement and restoration
- 3. To identify the segmentation techniques for feature extraction from images and classification
- 4. To formulate image registration techniques and virtual reality

#### **Expected Course Outcome:**

#### Student is expected to:

- 1. Comprehend image sampling and DFT
- 2. Process the given images to enhance them in spatial and frequency domains
- 3. Restore degraded images using frequency domain filters such as adaptive and Wiener filters
- 4. Extract features from a given image by segmentation and classify them
- 5. Develop algorithms for image compression
- 6. Register images from different modalities for better visualization and diagnosis
- 7. Develop algorithms for specific applications

# Module:1 Image Processing Fundamentals

2 hours

Modulating transfer function of visual system, Digitizing an image, medical image formats, image quality and information content- histogram, entropy, Fourier Transform and spectral contents, Signal-to-Noise-Ratio

#### Module:2 Removal of Noise in Medical Images

5 hours

Noise characterization, multi-frame averaging, statistics based filters, frequency domain filters for high frequency noise and periodic noise removal, Wiener filter, adaptive filters

# Module:3 Medical Image Enhancement

5 hours

Digital subtraction angiography, gray scale transforms, Histogram transformation, convolution mask operators, high frequency emphasis, homomorphic filtering, contrast enhancement

#### Module:4 Image Restoration

2 hours

Modelling image degradation, Inverse filtering, Wiener filtering, motion deblurring, blind deblurring.

#### Module:5 Medical Image Analysis and Classification

6 hours

Image segmentation – pixel based, edge based, and region based, morphological operations. Representation of shapes and contours, shape factors, statistical analysis of texture. Feature extraction

and image classification - statistical, rule based and neural network approaches.

# Module:6 Image Compression

5 hours

Lossy Vs lossless compression, distortion measures and fidelity criteria, Direct source coding, transform coding, predictive coding, Image coding and compression standards

# Module:7 Image Registration and Visualization

3 hours

Image registration - Rigid body transformation, Principal axis registration, Interactive principal axis registration, Feature based registration, Elastic deformation based registration, Image visualization - Surface rendering, volume rendering, virtual reality

Module:8

# **Expected Course Outcome:**

- 1. To apply physical science concepts to understand how they can be used in medical diagnostics
- 2. To compare the functioning of physiological and mechanical cardio vascular system
- 3. To comprehend and analyze the functioning of respiratory equipment
- 4. To analyze the machines that are available in intensive care units
- 5. To comprehend analyze the functioning of Laser and surgical equipment
- 6. To comprehend and analyze medical imaging devices
- 7. To choose appropriate technology to construct medical devices

# Module:1 Medical Ultrasonography

6 hours

Physics of Sound and Sound Waves, Absorption and Attenuation of Ultrasound, Scan Modes, Biological Effects of Ultrasound, Transducers, Doppler, Flowmeters, Echo Encephalograph

# Module:2 Cardiac Assistive and Coronary Care Devices

6 hours

Cardiac Defibrillator, AC & DC Defibrillator, Implantable Defibrillator, Cardiac Pacemaker, External, Internal, Implantable Pacemakers, Heart Lung Machine, Holter monitoring.

# Module:3 Respiratory Therapy Equipment

6 hours

Classification of Ventilators, Types, Artificial Ventilation, Humidifiers, Nebulizers, Aspirators, Anesthesia Machine, Oximeters

# Module:4 Intensive Care Devices

6 hours

Dialyzers, Portable Kidney Machines, Infusion Pumps, Automated Drug Delivery Systems, Bedside Monitors, Central Monitoring Consoles, Fetal Monitoring, Wireless Telemetry, Multi patient Telemetry

#### Module:5 Laser and Surgical Instruments

6 hours

Surgical Diathermy, Shortwave Diathermy, Microwave Diathermy, Lithotripsy, Safety aspects in Electro Surgical Units, Introduction to Lasers, Application of Pulsed Ruby, Nd-YAG, Helium-Neon, Argon, CO<sub>2</sub>, Excimer Lasers.

# Module:6 Radiology and Nuclear Medicine

7 hours

Electromagnetic Radiation, Nature and types of Nuclear Radiation, Units for measuring radioactivity, Origin and nature of X-Rays, X – Ray Tube, Fluoroscopy, Effect of Nuclear Radiationon Human Body, Computed Tomography - System Components, Gantry Geometry, Patient Dose, Pulse Height Analyzer, Radio Isotope Rectilinear Scanner, Gamma Camera, ECT, SPECT, PET

# Module:7 Magnetic Resonance and Thermal Imaging

6 hours

Principles of NMR in Imaging Reconstruction Techniques, NMR Components, Biological Effects of

NMR, Advantages of NMR, Medical Thermography, Mammography, Infra-Red Detectors, Quantitative Medical Thermography

Module:8 Contemporary issues 2 hours

**Total Lecture hours:** 45 hours

#### Text Book

1. Leslie Cromwell, "Biomedical Instrumentation and measurement", PHI, New Delhi, 2015

#### **Reference Books**

- John G. Webster, "Medical Instrumentation Application and Design", John Wiley and sons, New York, 2015.
- 2. Joseph Carr, Brown, Introduction to Biomedical Equipment, Pearson, 2014

#### List of Projects: (Indicative)

- 1. Design a VVI based Pacemaker for patients who need Right and Left ventricles to be paced.
- 2. Design a pulse detector based on ultrasound Doppler effect.
- 3. Design a synchronous defibrillator which depends on the appearance of R wave of every cycle.
- 4. Design the upper and lower discriminator circuit which can be applied for energy discrimination inradiation detector.
- 5. Design a circuit that can be applied as Electro surgical Unit analyser.

Mode of Evaluation: Theory: Continuous Assessment Test, Quiz, Digital Assignment, Final Assessment Test, Additional Learning (MOOC / Conference, Journal Publications / Make a thon / Project competition and more)

- 1. To understand the various laws and theorems applied to solve electric circuits and networks
- 2. To provide the students with an overview of the most important concepts in Electrical and Electronics Engineering which is the basic need for every engineer

# **Expected Course Outcome:**

- 1. Solve basic electrical circuit problems using various laws and theorems
- 2. Analyze AC power circuits and networks, its measurement and safety concerns
- 3. Classify and compare various types of electrical machines
- 4. Design and implement various digital circuits
- 5. Analyze the characteristics of semiconductor devices and comprehend the various modulation techniques in communication engineering
- 6. Design and conduct experiments to analyze and interpret data

### **Module:1** DC circuits

5 hours

Basic circuit elements and sources, Ohms law, Kirchhoff's laws, series and parallel connection of circuit elements, Node voltage analysis, Mesh current analysis, Thevenin's and Maximum power transfer theorem

#### **Module:2** AC circuits

6 hours

Alternating voltages and currents, AC values, Single Phase RL, RC, RLC Series circuits, Power in AC circuits-Power Factor- Three Phase Systems – Star and Delta Connection- Three Phase Power Measurement – Electrical Safety –Fuses and Earthing, Residential wiring

#### **Module:3** | Electrical Machines

7 hours

Construction, Working Principle and applications of DC Machines, Transformers, Single phase and Three-phase Induction motors, Special Machines-Stepper motor, Servo Motor and BLDC motor

# Module:4 | Digital Systems

5 hours

Basic logic circuit concepts, Representation of Numerical Data in Binary Form- Combinational logic circuits, Synthesis of logic circuits

# **Module:5** | Semiconductor devices and Circuits

7 hours

Conduction in Semiconductor materials, PN junction diodes, Zener diodes, BJTs, MOSFETs, Rectifiers, Feedback Amplifiers using transistors. Communication Engineering: Modulation and Demodulation - Amplitude and Frequency Modulation

# Total Lecture hours: 30 hours

|                    |   | 1.0              |

- [1] understanding basic concepts of linear algebra to illustrate its power and utility through applications to computer science and Engineering.
- [2] apply the concepts of vector spaces, linear transformations, matrices and inner product spaces in engineering.
- [3] solve problems in cryptography, computer graphics and wavelet transforms

# **Expected Course Outcome**

At the end of this course the students are expected to learn

- [1] the abstract concepts of matrices and system of linear equations using decomposition methods
- [2] the basic notion of vector spaces and subspaces
- [3] apply the concept of vector spaces using linear transforms which is used in computer graphics and inner product spaces
- [4] applications of inner product spaces in cryptography
- [5] Use of wavelet in image processing.

# Module:1 System of Linear Equations: 6 hours

Gaussian elimination and Gauss Jordan methods - Elementary matrices- permutation matrix - inverse matrices - System of linear equations - - LU factorizations.

# Module:2 Vector Spaces 6 hours

The Euclidean space R<sup>n</sup> and vector space- subspace —linear combination-span-linearly dependent-independent- bases - dimensions-finite dimensional vector space.

# Module:3 Subspace Properties: 6 hours

 $Row\ and\ column\ spaces\ \textbf{-}Rank\ and\ nullity-Bases\ for\ subspace-invertibility-\ Application\ in\ interpolation.$ 

# Module:4 Linear Transformations and applications 7 hours

Linear transformations – Basic properties-invertible linear transformation - matrices of linear transformations - vector space of linear transformations – change of bases – similarity

# Module:5 Inner Product Spaces: 6 hours

Dot products and inner products – the lengths and angles of vectors – matrix representations of inner products- Gram-Schmidt orthogonalisation

# Module:6 Applications of Inner Product Spaces: 6 hours

QR factorization- Projection - orthogonal projections - relations of fundamental subspaces - Least Square solutions in Computer Codes

| Module:7 | Applications of Linear equations : | 6 hours |
|----------|------------------------------------|---------|
|----------|------------------------------------|---------|

An Introduction to coding - Classical Cryptosystems –Plain Text, Cipher Text, Encryption, Decryption and Introduction to Wavelets (only approx. of Wavelet from Raw data) **Contemporary Issues:** Module:8 2 hours **Industry Expert Lecture Total Lecture hours:** 45 hours **Tutorial** A minimum of 10 problems to be worked out 30 hours by students in every Tutorial Class Another 5 problems per Tutorial Class to be given as home work. Text Book(s) 1. Linear Algebra, Jin Ho Kwak and Sungpyo Hong, Second edition Springer(2004). (Topics in the Chapters 1,3,4 &5) 2. Introductory Linear Algebra- An applied first course, Bernard Kolman and David, R. Hill, 9<sup>th</sup> Edition Pearson Education, 2011. **Reference Books** 1. Elementary Linear Algebra, Stephen Andrilli and David Hecker, 5th Edition, Academic Press(2016) 2. Applied Abstract Algebra, Rudolf Lidl, Guter Pilz, 2<sup>nd</sup> Edition, Springer 2004. 3. Contemporary linear algebra, Howard Anton, Robert C Busby, Wiley 2003 4. Introduction to Linear Algebra, Gilbert Strang, 5<sup>th</sup> Edition, Cengage Learning (2015).

The aim of this course is to

- 1. cover certain basic, important computer oriented numerical methods for analyzing problems that arise in engineering and physical sciences.
- 2. use MATLAB as the primary computer language to obtain solutions to a few problems that arise in their respective engineering courses.
- 3. impart skills to analyse problems connected with data analysis,4.solve ordinary and partial differential equations numerically

### **Expected Course Outcomes**

At the end of the course the student should be able to

- 1. Observe the difference between exact solution and approximate solution.
- 2. Use the numerical techniques to find the solution of algebraic equations and system of equations.
- 3. Fit the data using interpolation technique and spline methods.
- 4. Find the solution of ordinary differential equations, Heat and Wave equation numerically.
- 5. Apply calculus of variation techniques to extremize the functional and also findapproximate series solution to ordinary differential equations

# Module:1 Algebraic and Transcendental Equations 5 hours

General iterative method- rates of convergence- Secant method - Newton – Raphson method-System of non-linear equations by Newton's method.

# Module:2 System of Linear Equations and Eigen Value 6 hours Problems

Gauss –Seidel iteration method. Convergence analysis of iterative methods-LU Decomposition -Tri diagonal system of equations-Thomas algorithm- Eigen values of a matrix by Power and Jacobi methods.

#### Module:3 Interpolation 6 hours

Finite difference operators- Newton's forward-Newton's Backward- Central differences-Stirling's interpolation - Lagrange's interpolation - Inverse Interpolation-Newton's divided difference-Interpolation with cubic splines.

#### Module:4 Numerical Differentiation and Integration 6 hours

Numerical differentiation with interpolation polynomials-maxima and minima for tabulated values-Trapezoidal rule, Simpsons 1/3<sup>rd</sup> and 3/8<sup>th</sup> rules. –Romberg's method. Two and Three point Gaussian quadrature formula.

# Module:5 Numerical Solution of Ordinary Differential 8 hours Equations

First and second order differential equations - Fourth order Runge – Kutta method. Adams-Bashforth-Moulton predictor-corrector methods. Finite difference solution for the secondorder ordinary differential equations.

# **Programme Elective**

| Course code  | Course Title        | L   | Т    | Р  | J    | С   |

- 1. With an objective of imbibing a professional approach amongst students towards hospitalmanagement.
- 2. The subject encompasses management principles, staffing and marketing processes, discussingtheir significance and role in effective and efficient management of health care organizations.

#### **Expected Course Outcome:**

The student will be able to

- 1. Understand the basic principles in hospital system management.
- 2. Apply the system development life cycle concepts.
- 3. Comprehend the disposal and hospital waste management mechanisms.
- 4. Analyse the electrical and fire safety measures.
- 5. Understand the principles of material management in a hospital.
- 6. Analyse the financial and legal aspects in hospital management.

# Module:1 Principle of Hospital Management 4 hours

Importance of management and Hospital-Management control systems-Forecasting techniques decision-making process-Staffing pattern in hospitals-Selection-Recruiting process-Training of staff-Organizational structures.

# Module:2 Computers in Hospital Management 4 hours

System Development life cycle-Reasons to use computers in hospital-Main categories of information systems in hospitals-EPR-E health care.

# Module:3 Sterilization and waste management 4 hours

Disease Transmission - Disinfection methods — Sterilization - steam sterilizing (Auto claving) - Microwave (Non-burn treatment technology).-Disposal methods - Incinerator - Hazardous waste-Radioactive waste-Liquid waste destruction landfill-Air pollution and Emission control-Instrumentation and monitoring-Crematories.

# Module:4 Electrical and fire safety 4 hours

Sources of shocks, macro & micro shocks-Hazards, monitoring and interrupting the Operation from leakage current- Elements of fire-causes of fire-Action to be taken in case of fire in a hospital.

# Module:5 | Assessing Quality Health Care | 4 hours

Patient Safety Organization-Governmental & Independent-Measuring Quality care-Evaluation of hospital services – Six sigma way-Quality assurance in hospitals – Patient Orientation for total patient satisfaction-5S techniques

- 1. To learn the fundamentals of tissue engineering and tissue repairing 2. To acquire knowledge on clinical applications of tissue engineering
- 3.To understand the basic concept behind tissue engineering focusing on the stem cells, biomaterials and its applications

# **Expected Course Outcome:**

At the end of the course, students should be able to:

- 1. Multidisciplinary aspects in tissue engineering to solve healthcare problems
- 2.Identify sources of cells, bioactive molecules and materials
- 3. Design and develop scaffolds using conventional and advanced fabrication methods
- 4.Evaluate biological outcomes of tissue engineering strategies
- 5. Describe the regulatory aspects to commercialize products
- 6.Define site and patient specific applications

# Module:1 Introduction and History

6 hours

Introduction to tissue engineering:Basic definition; current scope of development; Tissue and organ banking; limitations of banking; types of tissues; organ and tissue culture invitro; origin of tissue engineering; history (with respect to artificial skin);

#### Module:2 Tissue Architecture

9 hours

Tissue types and Tissue components, Tissue repair, Engineering wound healing and sequence of events. Basic wound healing Applications of growth factors. scopesuse in therapeutics, cells as therapeutic agents, cell numbers and growth rates, measurement of cell characteristics morphology, numberviability, motility and functions. Measurement of tissue characteristics, appearance, cellular component, ECM component, mechanical measurements and physical properties.

# Module:3 Morphogenesis &Cell sources

8 hours

Morphogenesis and organ development in human; repair and regeneration; cell sources; stem cells and its types; Differentiation, differentiation and trans-differentiation; Intercellular communication- gap junctional and microvescular; Cell aggregation; adhesion dependence; Role of ECM in term of decellularizedallo-/xeno-genic tissues in tissue engineering

### Module:4 Scaffolds and bioreactors

6 hours

Classification of scaffold materials, criteria for ideal scaffold, various types of scaffolds, various types of bioreactor configurations for cell cultures and advantages/disadvantages of the same. Definition, 3-dimentionality; porosity and pore-size; fabrication technology: conventional (such as Solvent-casting particulate-leaching Gas foaming, electrospinning, fiber meshes/ fiber bonding, phase separation, freeze drying, solution casting) and solid free form technology (such as stereolithography, 3D printing, fused deposition modeling, phase-change jet printing)

# Module:5 Biomaterials and Transplantation of Engineered Cells and Tissues

6 hours

Definition, ideal properties and types; biomimetics; Properties like -- mechanical property, wetability, biodegradability and surface property; Types -- polymeric (natural and synthetic), nano-materials, ceramic, composites, hydrogels and metallic Clinical implementation Module:6 6 hours Examples of various types of engineered tissues, the latest developments / commercial successes in the area. Module:7 Introduction to Stem Cells, Gene Therapy, Regulation and ethics 2 hours Gene therapy and types of gene therapy. Examples of gene therapy in current science. Moral and risk evaluation of conducting gene therapy. **Contemporary issues:** Module:8 2 hours **Total Lecture hours:** 45 hours Text Book(s) 1. Principles of Tissue Engineering, 4th Edition Robert Lanza, Robert Langer, Joseph P. Vacanti, Academic Press; 4 edition (2015) 2. 3D Bioprinting and Nanotechnology in Tissue Engineering and Regenerative Medicine Lijie Grace Zhang John Fisher Kam Leong, 1st EditionAcademic Press (2015) **Reference Books** 1. Ravi Birla, (2014) Introduction to Tissue Engineering: Applications and Challenges, Wiley-IEEE Press. Robert A. Brown, (2012) Extreme Tissue Engineering: Concepts and Strategies for tissuefabrication, Wiley Blackwell. Mode of Evaluation: Continuous Assessment Test, Quiz, Digital Assignment, Final Assessment Test, Additional Learning (MOOC / Conference, Journal Publications / Make a thon / Project competition and more) Mode of Evaluation: Continuous Assessments and FAT Recommended by Board of Studies: 19-09-2019 Approved by Academic Council No. 56 Date 24-09-2019

- 1. Apply basic knowledge of various computational algorithms on areas of applications inbioinformatics.
- 2. Analyze common problems in bioinformatics, alignment techniques, ethical issues, public datasources and evolutionary modelling.
- 3. Discover the practical use of tools for specific bioinformatic areas.

#### **Expected Course Outcomes:**

- 1. Evaluate the main databases at the NCBI and EMBL-EBI resources.
- 2. Compare the databases, tools, repositories and be able to use each one to extract specificinformation.
- 3. Demonstrate the selected tools at NCBI and EBI to run simple analyses on genomic sequences.
- 4. Apply knowledge of bioinformatics in a practical project.
- 5. Develop the ability for critical assessment of scientific research publications in bioinformatics.
- 6. Understanding of the research process in general, such as research methods, scientific writing, and research ethics.

# Module:1 Introduction to Bioinformatics

4 hours

Scope and applications of bioinformatics, Evolutionary Basis - Sequence Homology, Sequence Identity, Sequence Similarity, Biological databases – File formats.

# Module:2 Sequence Alignment

4 hours

Alignment of pairs of sequences, Introduction - Definition of sequence alignment, Methods - Dot matrix sequence comparison. Similarity Searches on Sequence Databases - FASTA and BLAST.

# Module:3 Pairwise Sequence Alignment

4 hours

Dynamic programming algorithm for sequence alignment – Global Alignment: Needleman-Wunsch, Local Alignment: Smith-Waterman, Gap penalty, Assessing the significance of an Alignment.

# Module:4 Multiple Sequence Alignment

4 hours

Dynamic programming, progressive methods, Iterative methods, MSA using CLUSTAL W,PILEUP and CLUSTAL X, purpose and applications of multiple sequence alignment, phylogenetic trees.

#### Module:5 Scoring Matrices

4 hours

Similarity searches - PAM and BLOSUM matrix, Dayhoff mutation matrix, construction of PAM and BLOSUM matrix. Differences between PAM & BLOSUM.

# Module:6 Neural Networks

4 hours

Introduction – Priors & likelihoods - Learning algorithms: Backpropagation - Sequence encoding & output interpretation - Sequence correlations & Hidden Markov Models.

# Module:7 Structural Bioinformatics

4 hours

|--|--|--|
| CJLZUU4  | DATABASE MANAGEMENT SYSTEM   | 2 0 2 4  |
| Pre-requisite  | NIL  | Syllabus   |
|  |  | version  |
|  |  | v1.0   |
| Course Objectives:   |  |  |
|  | nd the concept of DBMS and ER Modeling.  |  |
| •  | e normalization, Query optimization and relational al  |  |
| 3. To apply the  | concurrency control, recovery, security and indexing   | for the real time data.  |
| Expected Course Out  | come:  |  |
| •  | pasic concept and role of DBMS in an organization.   |  |
| 2. Illustrate the  | design principles for database design, ER model and  | normalization.   |
| <ol><li>Demonstrate</li></ol>  | e the basics of query evaluation and heuristic query or  | otimization techniques.  |
| 4. Apply Concu   | rrency control and recovery mechanisms for the desir   | able database problem.   |
| <ol><li>Compare the</li></ol>  | e basic database storage structure and access techniqu   | ues including B Tree, B+   |
|  | and hashing.   |  |
|  | undamental view on unstructured data and its manag   |  |
| 7. Design and in   | mplement the database system with the fundamental  | concepts of DBMS.  |
|  |  |  |
|  |  |  |

|                   |              | v. 1.0 |    |     |     |    |
| Course Objectives |              |        |    |     |     |    |

- 1. To introduce the concept of Data Mining and Data Preprocessing
- 2. To develop the knowledge for application of the mining algorithms for association, clustering
- 3. To explain the algorithms for mining data streams and the features of recommendationsystems.

# **Expected Course Outcome:**

- 1. Interpret the contribution of data warehousing and data mining to the decision-support systems
- 2. Apply the various classifications techniques to find the similarity between data items
- 3. Design the model to sample, filter and mine the Streaming data
- 4. Apply the link analysis and frequent item-set algorithms to identify the entities on the realworld data
- 5. Evaluate and report the results of the recommended systems
- 6. Analyse the various data mining tasks and the principle algorithms for addressing the tasks

| 7. Create     | the working model as a team to solve the challeng                 | ing data mining problems               |

# Module:1 INTRODUCTION 3 hours

Data Mining – Data ware housing-OLAP-Data Preprocessing

# Module:2 CLASSIFICATION TECHNIQUES AND FINDING SIMILAR ITEMS 5 hours

Classification Techniques: Decision Tree,ID3,K-Nearest Neighbour Classifier, Naive Bayes-Near Neighbour Search – Shingling of Documents - Similarity Preserving – Locality Sensitive Hashing (LSH) – Application and Variance of LSH – Distance Measures – High degrees of similarity

# Module:3 | MINING DATA STREAMS | 4 hours

Stream Data model - Sampling Data in a Stream - Filtering Streams - Counting distinct elements in a stream - Estimating Moments - Counting Ones in a window - Decaying windows

# Module:4 LINK ANALYSIS 4 hours

Page Rank – Link Spam – Hubs and Authorities

# Module:5 | FREQUENT ITEM SETS | 4 hours

Market-Basket Model – A-priori Algorithm – Handling larger datasets – Counting Frequent items in a stream – Limited Pass Algorithms

# Module:6 | CLUSTERING | 4 hours

Hierarchical Clustering – K-means Algorithm – Clustering in Non-Euclidean spaces, Clustering for Streams and Parallelism

# Module:7 | RECOMMENDATION SYSTEMS | 4 hours

Content based – Collaborative Filtering – Dimensionality reduction-Case study

|               |  |   |   | v. 01            |   |

- 1. To study the production of x-rays and its application in medical imaging
- 2. To study the different types of Radio diagnostic techniques
- 3. To study the special imaging techniques used for visualizing the cross sections of the body.

# **Expected Course Outcome:**

The student will be able to

- 1. To comprehend the acquisition techniques involved in different X Ray medical imaging
- 2. To conceive the historical evolution of the imaging methods pertaining to computed tomographyand to excel with different reconstruction techniques and programming techniques for noise removal.
- 3. To comprehend the principle of operation of modules employed in magnetic resonance imaging
- 4. Familiar with all the modules employed in magnetic resonance imaging
- 5. To manipulate of nuclear radiation fields for diagnostics to be skillful in image generation
- 6. To comprehend the Ultrasound imaging system.
- 7. To comprehend the principle of operation of modules employed in thermal imaging

# Module:1 X – Rays 4 hours

Nature of X-Rays - X-ray Absorption - Tissue Contrast. X-Ray Equipment — X-ray Tube, collimator, Bucky Grid, power supply. Digital Radiography - discrete digital detectors, storage phosphor and film Scanning. X-Ray Image intensifier tubes - Fluoroscopy — Digital Fluoroscopy. Angiography, Cine angiography. Digital Subtraction Angiography. Mammography.

# Module:2 Computed Tomography

4 hours

Principles of Tomography - First to Fifth generation scanners — Image reconstruction Technique -Back projection and Iterative method. Spiral CT Scanning - Ultra fast CT Scanners- X-Ray Sources — Collimation — X-Ray Detectors — Viewing System

# Module:3 Magnetic Resonance Imaging

4 hours

Fundamentals of Magnetic Resonance- Interaction of nuclei with static Magnetic Field and Radio frequency wave – Rotation and Precession –induction of a magnetic resonance signal – bulk Magnetization – Relaxation Processes T1 and T2.

# Module:4 MRI System and its components

4 hours

MRI system- System Magnet, generation of Gradient magnetic Fields, Radio Frequency coils, Shim coils, Electronic components

#### Module:5 Emission Imaging

4 hours

Alpha, Beta, Gamma Emission, different types of Radiation Detectors, G.M. & Proportional Counters, Pulse Height Analysers, Isotopic, Scanners, Principle of PET and SPECT, PET/CT

# Module:6 Ultrasound Imaging

4 hours

Wave propagation and interaction in Biological tissues, Acoustic radiation fields, continuous and

- 1. Educate the need for wearable devices and introduce the different techniques to measure physiological/ environmental parameters.
- 2. To provide a clear understanding of the state-of —the-art wearable devices available in the market for various applications.
- 3. To know about the latest research trends in development of wearable and flexible sensors and its applications in the healthcare industry in particular.

# Expected Course Outcome:

- 1. Introduced the role and importance of wearable technology in our society and its usage in various industrial sectors to the students.
- 2. Rudiments of various Thin film deposition and polymer materials for electrode fabrication were discussed with students.
- 3. Comprehensive understanding of power consumption in wearable sensors and need for energy harvesting were provided to the students.
- 4. Highlighted the students with various Inertial sensors for monitoring of various Physical parameters.
- 5. Acquainted the students with various wearable sensors for healthcare and biomedical applications
- 6. Discussed about the applications of wearable sensors in navigation with the students

#### Module:1 Introduction to Wearable Devices

4 hours

Role of Wearables, Attributes of Wearables, Meta Wearables, Challenges and Opportunities, Future of Wearables, Social Aspects, Wearable Haptics, Intelligent clothing, Industry sectors' overview – sports, healthcare, Fashion and entertainment, military, environment monitoring, mining industry, public sector and safety.

# Module:2 Fabrication of Wearable Sensors

8 hours

Working principles of wearable sensors, Characteristics of wearable sensors; Thick-film processing, Thin film processing, overview of Photolithography; Issues in the fabrication of wearable sensors, Substrate selection, Substrate pre-processing, Fabrication of electrodes. Fabrication of wearable sensors using electrical properties.

# Module:3 Energy harvesting for wearable devices

5 hours

Energy Expenditure of Body-Worn Devices, Energy and Power Consumption Issues, Design Considerations and need for Energy Harvesting Systems, Energy Harvesting from Temperature Gradient at the Human Body, Foot Motion and Light, Wireless Energy Transmission, Energy.

#### Module:4 Wearable Inertial Sensors

5 hours

Wearable Inertial Sensors - Accelerometers, Gyroscopic sensors and Magnetic sensors; Modality of Measurement- Wearable Sensors, Invisible Sensors, In-Shoe Force and Pressure Measurement; Applications: Fall Risk Assessment, Fall Detection, Gait Analysis, Physical Activity monitoring: Human Kinetics, Cardiac Activity, Energy Expenditure measurement: Pedometers, Actigraphs.

# Module:5 Wearable Devices for Healthcare-1 ours

Wearable ECG devices: Basics of ECG and its design, Electrodes and the Electrode–Skin Interface; Wearable EEG devices: Principle and origin of EEG, Basic Measurement set-up, electrodes and instrumentation; Wearable EMG devices: EMG/ SEMG Signals, EMG Measurement – wearable surface electrodes, SEMG Signal Conditioning, Applications. Smart textile for neurological rehabilitation system (NRS), Study of flexible and wearable EMG sensors. Epidermal electronics system (EES), Study of Multiparametric (ECG, EEG, EMG) Epidermal Electronics Systems.

# Module:6 Wearable Devices for Healthcare-2 6 hours

Wearable Blood Pressure (BP) Measurement: Cuff-Based Sphygmomanometer, Cuffless Blood Pressure Monitor. Study of flexible and wearable Piezoresistive sensors for cuffless blood pressure measurement. Wearable sensors for Body Temperature measurement: Intermittent and Continuous temperature monitoring.

# Module:7 Wearable Biochemical Sensors 7 hours

Wearable Biochemical Sensors: Parameters of interest, System Design –Textile based, Microneedle based; Types: Wearable Colorimetric Sensing Platforms, Electrochemical. Wearable pulse oximeter, Wearable capnometer. Wearable sweat analysis, drug monitoring, alcohol testing devices; Sensor Design and Development - Textile Patch, Microfluidic channel.

- 1. Introduce and discuss the historical background of evolution of MEMS and Microsystems and their applications and highlight the scaling effects in miniaturizing devices.
- 2. Educate on the rudiments of various materials and fundamental concepts used in MEMS and microfluidics fabrication
- 3. Comprehend various fluidic systems in LoC devices and identify their usage in development of various electrochemical biosensors, paper based microfluidics and chemical analysis.

# **Expected Course Outcome:**

- 1. Introduced the historical background of evolution of MEMS and Microsystems as well as discussed the scaling effects on different Physical domains to the students.
- 2. Rudiments of silicon and various polymer materials for MEMS fabrication was discussed with students.
- 3. Comprehensive understanding of basic microfluidic theory and its fabrication techniques were provided to the students.
- 4. Highlighted the students with various Fluidic systems for complete microfluidic device development.
- 5. Acquainted the students with various techniques of developing electrochemical LoC biosensors
- 6. Discussion about the applications of microfluidics in development of low cost paper-based devices and for chemical synthesis.
- 7. Design and fabrication of various microfluidic LoC devices.

# Module:1 Introduction to MEMS

3 hours

Historical background of Micro Electro Mechanical Systems-Types of MEMS devices-Applications of MEMS in healthcare industry, Microsystems and Miniaturization.

#### Module: 2 Scaling Laws in MEMS

3 hours

Introduction to Scaling, Scaling in Geometry-Scaling in Rigid, Body Dynamics, Scaling in Electrostatic Forces, Scaling in Electromagnetic Forces, Scaling in Heat Transfer, Scaling in Fluid Mechanics/ Microfluidics.

# Module:3 Materials for MEMS and Microfabrication Technology

4 hours

Substrates and wafers, Silicon and Silicon compounds, Polymers (SU8, PDMS), Thin filmcoating: PVD, CVD, Photolithography, Lift-off technique, Etching, Bulk micro machining, Surface micro machining, LIGA process.

### Module:4 Microfluidics: Theory and Fabrication

5 hours

Basic Microfluidics Theory: Fluidic parameters, Equation of motion, Transport modes in microfluidic systems; Micromachining of silicon, glass, rigid and soft polymers for micro total analysis systems, Soft-Lithography: Molding Technology. Surface chemistry in polymer microfluidic system.

#### Module:5 Fluidic Systems of Lab-on-Chip devices

5 hours

Lab-On-a-Chip Platforms and Components – Fluidic Platforms-Pressure driven, Capillary flow,

flow, Electrokinetics, Electrowettingon Dielectrics (EWOD). Segmented Centrifugal Microfluidics; Components of LoC Systems- Microvalves, Micropumps-mechanical (membrane type) and non-mechanical (electrical-electroosmosis, electrophoretic, DEP, EHD), Micromixers, Filters, Sensors. Module:6 Electrochemical Lab-on-Chip Biosensors 5 hours Electrodes Fabrication, Electrochemical Detection Techniques-Amperometric, Potentiometric, Conductimetric, Impedimetric; Applications- Enzymatic-Based LOC Biosensors, Enzymeimmobilization techniques, Antibodies-Based LOC-Biosensors, Cell-Based LOC-Biosensors. Module:7 Paper based Microfluidics 3 hours Low-Cost Diagnostics, Properties of Paper-Based Devices, Current Status of Paper-BasedDevices, Technical Achievements and Challenges- Sample preparation, Flow, Detection techniques, Module:8 **Contemporary issues:** 2 hours **Total Lecture hours: 30 hours** Text Book(s) Tai-Ran Hsu, "MEMS & Microsystem, Design and manufacture", 2017, 1st Edition. - 1. Understand the properties of the Bio-compatible materials
- 2. Expose to different types of Biomaterials
- 3. Estimate artificial organs and its constraints

#### **Expected Course Outcome:**

The student will be able

- 1. To understand and classify biomaterials based on their characteristics property.
- 2. To justify different metals and ceramics usage based on different application.
- 3. To decide polymeric materials and its distinctive combinations that could be used as a tissue replacement implants
- 4. To apply the knowledge in artificial organ using these materials
- 5. To comprehend the knowledge about the need for artificial organs with its desired design consideration, organ replacement and steps required to evaluate the device.
- 6. To perceive the basics and concepts of artificial heart, artificial lungs, liver, blood and kidney.

# Module:1 Structure of Biomaterials and Biocompatibility

4 hours

Definition and classification of biomaterials, mechanical properties, surface and bulk properties of biomaterials, viscoelasticity, wound-healing process, body response to implants, blood compatibility.

#### Module:2 Metal and Ceramic Materials

6 hours

Metallic implant materials, stainless steels, co-based alloys, Ti-based alloys, ceramic implant materials, aluminum oxides, hydroxyapatite glass ceramics carbons, medical applications.

# Module:3 Polymeric Implant Materials

5 hours

Polymerization, polyolefin, polyamicles, Acrylic, polymers, rubbers, high strength thermoplastics, natural and synthetic polymer, medical applications.

#### Module:4 Tissue Replacement Implants

6 hours

Soft-tissue replacements, sutures, surgical tapes, adhesive, percutaneous and skin implants, maxillofacial augmentation, blood interfacing implants, hard tissue replacement implants, internal fracture fixation devices, joint replacements.

# Module 5 Design of Artificial Organs

6 hours

Substitutive medicine, Biomaterial Concentration, Outlook for Organ Replacement, Design Consideration, Evaluation of Artificial Organs

#### Module 6 Cardiovascular Implants

Blood clotting, vascular implants, cardiac pacemakers, blood substitutes, artificial heart, extracorporeal blood circulation devices, artificial heart valves. Module:7 **Artificial Organs and Devices** 10 hours Comparison of Artificial Lungs and Natural Lungs, Oxygen Transport, Carbon-di-oxide Transport, Coupling of Oxygen & Carbon-di-oxide Exchange, Shear Induced Transport, Augmentation and Devices for Improved Gas Transport, Artificial Kidney: Renal Transplantation, Mass Transfer in Dialysis, Membranes, Hemofiltration, Adequacy of Dialysis, Peritoneal Dialysis Equipment, Artificial pancreas: Insulin Therapy, Therapeutic options in Diabetes, Insulin Administration System, Insulin Production System, Artificial Liver: Liver Support Systems, Global Liver Function Replacement, Hybrid Liver function Replacement. **Contemporary issues:** 2 hours Module:8 **Total Lecture hours:** 45 hours Text Book(s) J. Park, Biomaterials: An Introduction, Springer Science & Business Media, 2012 2. Michael Lysaght, Thomas J Webster, Biomaterials for Artificial Organs, Elsevier Science, 2018 Reference Books Sujata V. Bhatt, Biomaterials Second Edition, Narosa Publishing House, 2005 2. Standard Handbook of Biomedical Engineering & Design – Myer Kutz, McGraw-Hill, 2003 3. |               |                               |                  |   |   | v.1 | 0 |

- 1. Introduce the basic concepts of solid mechanics and fluid dynamics with respect to physiological systems.
- 2. Familiarise students with the mathematical models that can be used in the analysis ofphysiological systems.
- 3. Understand the parameters and constraints pertaining to the designing of the physiological tissues and organs.

# **Expected Course Outcomes:**

- 7. Understand the basic concepts in Biomechanics and Biofluid Dynamics.
- 8. Comprehend the applications of posture and gait analysis in restoring body functions.
- 9. Apply the various aspects of embedded technology and IoT in ergonomics.
- 10. Develop better understanding about various bio fluids.
- 11. Ability to construct a mathematical model for any solid/fluid tissue and their interactions.
- 12. Explore various parameters and constraints that pertaining to FEM and FEA of solid and fluid bio structures.
- 13. Ability to design and analyse hard, soft and fluid tissues of the body.

#### Module:1 Introduction to Solid Mechanics

6 hours

Basic Biomechanics: Kinematics, Kinetics; Planes and axes of motion; Newton's law of motion, Translational, Rotational, Curvi-Linear Motions; Types of human joints; Ortho and Osteo kinematics; Types of muscle contraction: Isometric, Isotonic, Isokinetic; Role of skeletal muscles during contraction: Agonist, antagonist, stabilizer, inhibitor; Coplanar, parallel force systems; Resultant forces; Forces: gravitational force, buoyant force; Use of force in improving the work efficiency.

#### Module:2 Posture & Gait

6 hours

Normal posture, deviations from normal posture; Effects of age, occupation, habit, disease on posture; Normal gait pattern, Influence of posture on gait; Change of posture and gait in certain diseases: scoliosis, kyphosis, lordosis, flat back posture, crossed leg, equinus, flat foot, knock knees, bow legs, sway back; Abnormal gait patterns. Occupational modifications on posture and gait. Variation of

posture and gait during pregnancy.

#### Module:3 Ergonomics

4 hours

Designing of suitable devices for posture and gait correction and modifications; Parameters and Constraints of design; Material choices available for various designs; Wearable devices to enhance the body mechanics, reduction of energy usage, efficient use of human joints and muscles. Use of IoT in ergonomics.

# Module:4 Fluid Mechanics

3 hours

Introduction to fluid mechanics: Newton and non-Newton fluids; Laminar and turbulent flow, Viscosity, elasticity, viscoelasticity; Basic laws governing rheology

Module:5 Bio Fluids

Body fluids: blood, plasma, CSF, protoplasm, lymph, synovial fluid, sweat, urine. Aqueous humor, visceral fluids, cystic fluid; Viscosity: definition, factors affecting viscosity of various body fluids; influence of varied viscosity in causing organ/ system dysfunction

Module:6

Viscoelastic Models

3 hours

Viscoelasticity of tissues; Mathematical modelling of living tissues: Maxwell, Voigt, Kelvin models. Mathematical equivalent for all the body fluids and their interaction with bones. Detailed study ofblood and its properties; Disease of vascular system leading to altered dynamics and vice versa.

Module:7 Modelling of Physiological Implants/ System 3 hours
Basics of modelling of solid structures like bones, meniscus, uni-bi-tri axial joints; fluids like blood,
CSF, plasma; Construction and assembly of organ systems; Parameters to be considered for analysis of models; Basics of FEM and FEA of orthopaedics and cardiovascular implants.

| Module:8    |              | Contemporary issues:                                       |                            |        |               |                           | 2 hours   |

- 1. To understand the general principles of design of biometric systems, different algorithms applied and its functional blocks.
- 2. Analyze common problems in biometrics techniques, ethical issues, public data sources and security.
- 3. To study various Biometric Authentication Methods and security systems.

#### Expected Course Outcomes:

- 14. Demonstrate knowledge engineering principles underlying biometric systems.
- 15. Describe and explain Finger print feature processing and techniques, computer enhancement and modelling.
- 16. Face recognition, how to perform Feature Extraction, classification of features, training of algorithm using neural network
- 17. Competing iris Scan technologies, various steps involved in voice scan, challenges related to iris and voice scan. Perceive various areas of physiological and Behavioural Biometrics
- 18. Biometric system and integration strategies, performance evaluation of biometric system, Statistical Measures of Biometrics. New authentication methods and security systems and futuristic devices.

# Module:1 Introduction to Biometric systems

6 hours

Introduction and back ground – Biometric technologies – Passive biometrics – Active biometrics - Biometric systems – Enrollment – Templates – Algorithm – Verification – Biometric applications – biometric characteristics - Authentication technologies –Need for strong authentication – Protecting privacy and biometrics and policy – Biometric applications – Biometric characteristics

#### Module:2 Fingerprint Biometric systems

6 hours

History of fingerprint pattern recognition - General description of fingerprints - Finger print feature processing techniques - Fingerprint sensors using RF imaging techniques - Fingerprint quality assessment - Computer enhancement and modeling of fingerprint images - Fingerprint enhancement - Feature extraction - Fingerprint classification - Fingerprint matching

#### Module:3 Face recognition and hand geometry

6 hours

Introduction to face recognition \_ Neural networks for face recognition — face recognition from correspondence maps — Hand geometry — Scanning — Feature Extraction - Adaptive Classifiers - Visual-Based Feature Extraction and Pattern Classification - Feature extraction — Types ofalgorithm — Biometric fusion.

# Module:4 Iris, Voice recognition

6 hours

Iris scan - Features — Components — Operation (Steps) — Competing iris Scan technologies — Strength and weakness. Voice Scan - Features — Components — Operation (Steps) — Competing voice Scan (facial) technologies—Strength and weakness.

Module:5 Physiological and Behavioural Biometrics

Retina scan – AFIS (Automatic Finger Print Identification Systems) – Behavioral biometrics – Signature scan- Keystroke scan biometrics application – Biometric Solution Matrix – Bio privacy – Comparison of privacy factor in different biometrics technologies.

Multimodal Biometrics Module:6 6 hours Introduction to multimodal Biometric system – Integration strategies – Architecture – Level of fusion – Combination strategy –Training and adaptability – Examples of multimodal biometric systems – Performance evaluation- Statistical Measures of Biometrics – FAR – FRR – FTE – EER – Memory requirement and allocation. Module:7 Biometric security systems 6 hours Securing and trusting a Biometric transaction — Matching location — local host - authentication server – Match On Card (MOC) – cryptography and Multimodal biometrics and Two-Factor authentication. Biometrics in Cyber Security and Network protection Module:8 3 hours **Contemporary issues: Total Lecture hours:** 45 hours Text Book(s) Nalini K Ratha and Govindraju, "Advances in Biometrics - Sensors, Algorithms 1. Systems", 2018, 1<sup>st</sup> edition, Springer, London. Haizhou Li, Liyuan Li, Kar-Ann Toh, Advanced Topics in Biometrics, 2012, 1<sup>st</sup> edition, 2. |               |  |   | \ | /1.0 | )                |   |  |  |  |

- 1. To impart the key principle of telemedicine and healthcare.
- 2. Expound element of tele-radiology systems like image acquisition system, display system and communication networks.
- 3. Demonstrate the methods and techniques used in virtual instrumentation.

#### **Expected Course Outcome:**

- 4. To teach the key principles of telemedicine-health and its technology.
- 5. To make the student understand tele-medical technology.
- 6. To introduce the students with the knowledge of mobile telemedicine and its applications.
- 7. To study the need for digital imaging and picture archiving and communication systems in telemedicine application.
- 8. To introduce the student with the significance of Virtual instrumentation.

To teach the key significance and the biomedical equipment applications of Virtual instrumentation.

# Module:1 Telemedicine and Health

5 hours

History and Evolution of telemedicine - Tele health - Tele care - Organs of telemedicine - Global and Indian scenario. Ethical and legal aspects of Telemedicine - Social and legal issues - Safety and regulatory issues - Advances in Telemedicine.

# Module:2 Telemedical Technology

8 hours

Principles of Multimedia - Text, Audio, Video, data - Data communications and networks - PSTN – POTS – ANT – ISDN – Internet - Air/ wireless communications: GSM satellite - and Micro wave - Modulation techniques, Types of Antenna - Integration and operational issues - Communication infrastructure for telemedicine – LAN and WAN technology - Satellite communication. Mobile hand held devices and mobile communication - Internet technology and telemedicine using world wide web (www) - Video and audio conferencing - Clinical data – Local and centralized.

#### Module:3 Mobile Telemedicine

6 hours

Tele radiology: Definition, Basic parts of tele radiology system - Image Acquisition system

- Display system Tele pathology Multimedia databases Color images of sufficient resolution
- Dynamic range Spatial resolution Compression methods Interactive control of color.

#### Module:4 Information System

5 hours

Medical information storage and management for telemedicine - Patient information medical history - Test reports - Medical images diagnosis and treatment - Hospital information system – Doctors – Paramedics - Facilities available -Pharmaceutical information system.

# Module:5 Telemedical Applications

5 hours

Telemedicine access to health care services — Health education and self-care - Introduction to robotics surgery - Tele surgery - Tele cardiology, Tele oncology - Telemedicine in neurosciences - Electronic Documentation - e - health services, security and interoperability -

Telemedicine access to health care services — health education and self-care - Business aspects - Project planning and costing - Usage of telemedicine.

# Module:6 Virtual Instrumentation and its programming Techniques

8 hour

Virtual Instrumentation: Historical perspective - advantages - block diagram and architecture of a virtual instrument - Conventional Instruments versus Traditional Instruments - data-flow techniques, graphical programming in data flow, comparison with conventional programming. VIs and sub-VIs, loops and charts, arrays, clusters and graphs, case and sequence structures, formula nodes, local and global variables, State machine, string and file I/O, Instrument Drivers, Publishing measurement data in the web.

# Module:7 VI Toolsets and applications

6 hours

Use of Analysis tools, Fourier transforms, power spectrum, correlation methods, windowing and filtering. Application of VI in process control designing of equipments like oscilloscope, Digital multimeter. Distributed I/O modules- Application of Virtual Instrumentation: Instrument Control, Development of process database management system, Simulation of systems using VI, Image acquisition and processing, Motion control. Biomedical Applications: Examination, Monitoring, Biofeedback, Training and education.

- 1. Familiarize students with Artificial Intelligence principles and techniques in Biomedical
- 2. Introduce the facts and concepts of cognitive science by computational model and theirapplications in Biomedical
- 3. Introduce the facts and concepts of cognitive science by computational model and theirapplications in Biomedical

#### **Expected Course Outcome:**

- 1. Apply knowledge of computing and mathematics appropriate to the medical applications.
- 2. Analyze a medical problem, identify and define the computing requirements appropriate to its solution
- 3.To design, implement, and evaluate a computer-based system, process, component, or programto meet Medical needs
- 4. Design efficient algorithm to achieve optimized solution in complex medical situation
- 5. Apply heuristic methodologies in state-space medical diagnostic problems
- 6. Characterize various ways to represent the Medical Learning system
- 7. Design the Medical adaptive mechanism in case of uncertainty
- 8. Implement learning algorithms to apply and resolve in Biomedical problems

# Module:1 Artificial Intelligence and its Issues

4 hours

Definitions - Importance of AI, Evolution of AI – Medical Applications of AI, Classification of AI systems with respect to environment, Knowledge Inferring systems and Planning, Uncertainty and towards Learning Systems

# Module:2 Overview to Problem Solving

4 hours

Medical Problem solving by Search, Problem space - State space, Blind Search - Types, Performance measurement

#### Module:3 Heuristic Search

4 hours

Types, Game playing – mini-max algorithm, Alpha-Beta Pruning techniques in medical diagnosis and decision making system

# Module:4 Knowledge Representation and Reasoning

4 hours

Logical systems – Medical Knowledge Based systems, Propositional Logic – Constraints, Predicate Logic – First Order Logic, Inference in First Order Logic, Ontological Representations and applications. Applications in diagnosis of medical condition.

# Module:5 Uncertainty and knowledge Reasoning

4 hours

Overview – Definition of uncertainty, Bayes Rule – Inference, Belief Network, Utility BasedSystem, Decision Network, Applications in Medical Diagnosis.

#### Module:6 Learning Systems

| Prerequisite: | ECE1005 - Sensors and Instrumentation |   |   |   |   |   |

# Course objectives (CoB):

- 1. To provide basic understanding of robotics and their applications.
- 2. To demonstrate the need for various sensors and drives in robotics.
- 3. To provide knowledge about the robot kinematics, path planning and different trajectories.
- 4. To make students understand the basics of programming of robots, contemporary use and design of robots in practice and research.

# Course Outcomes (CO):

- 1. Understand the necessity of robots in various applications.
- 2. Comprehend the working of basic electric, electronic and other types of drives required in robots.
- 3. Identify a suitable sensor for a specific robot.
- 4. Derive the mathematical model of robotic systems and analyze its kinematic behavior.
- 5. Design robots for diverse environments encompassing all types of motions and paths.
- 6. Apply the ideas for performing various robotic tasks with the application of programmingskills.
- 7. Design of different types of robots for various applications.

# Module:1 Introduction to Robotics 2 hours Robots: Basics, Types-Application, Mobility, Terrain, components classification, performance characteristics.

| Module:2 | Drives for Robotics | 3 hours |
|----------|---------------------|---------|
|----------|---------------------|---------|

Drives: Electric, hydraulic and pneumatic drives.

# Module:3 Sensors for Robots 4 hours

Tactile sensors - Proximity and range sensors - Acoustic sensors - Vision sensor systems -Image processing and analysis - Image data reduction – Segmentation – Feature extraction -Object recognition.

#### Module:4 Robot Kinematics and Dynamics 7 hours

Kinematics of manipulators, rotational, translation and transformation, Homogeneous, Transformations, Denavat – Hartenberg Representation, Inverse Kinematics. Linearization of Robot Dynamics – State variable continuous and discrete models.

# Module:5 Path Planning 5 hours

Types of trajectories, trajectory planning and avoidance of obstacles, path planning, skew motion, joint integrated motion and straight line motion.

# Module:6 Programming of Robots 3 hours

Robot programming: languages and software packages-MATLAB/Simulink, OpenRDK, Adams.

#### Module:7 Application of Robots 4 hours

Industrial robots used for welding, painting and assembly, remote controlled robots, robots for nuclear, thermal and chemical plants, industrial automation, typical examples of automated industries.

- 1. Introduce the basic concepts in Biomedical Informatics.
- 2. Understand the applications of an electronic medical record system and medical standards.
- 3. Acquaint the students to clinical decision support systems.
- 4. Introduce the basics of bioinformatics, resources in the field and explore the variousdatabases.

#### **Expected Course Outcomes:**

- 1. Understand the basic concepts in Biomedical Informatics.
- 2. Comprehend the applications of an electronic medical record system.
- 3. Apply the various aspects of health informatics and medical standards.
- 4. Design and develop clinical decision support systems.
- 5. Understand the basics of bioinformatics and the resources in the field.
- 6. Explore and apply the various bioinformatics tools and databases available in NCBI.
- 7. Analyse and apply the standards in proper health care delivery.

# Module:1 Introduction to Biomedical Informatics

7 hours

The Science and the Pragmatics - Biomedical Data - Their Acquisition, Storage, and Use -Computer Architectures for Health Care and Biomedicine - Overview of hospital information system - Patient history taking mechanisms - Patient data processing - Database Management - Communication of medical data across different hospital units - Networking and Integration of patient data.

# Module:2 Computer Architectures and Software Engineering for Health Careand 6 hours Biomedicine

Data from patients - Patient Record, Coding and classification — Standards - Natural Language Processing - Biomedical Imaging Informatics - Biosignal Analysis - Electronic Health Record Systems - Patient-Centered Care Systems - Primary care - Clinical Departmental Systems - Nursing Information Systems.

#### Module:3 Electronic Patient Record and Standards

6 hours

Electronic Patient Record - Medical data formats – Medical Standards – HL7 – DICOM - LOINC -PACS - Medical Standards for Vocabulary - ICD 10 – DRG - MeSH, UMLS, SNOMED - Healthcare Standards - JCAHO, HIPAA.

# Module:4 Biomedical Decision Making

6 hours

Probabilistic Clinical Reasoning - Medical Knowledge and Decision Support - Methods fordecision support - Clinical decision-support systems - Strategies for medical knowledge acquisition - Predictive tools for clinical decision support.

#### Module:5 Bioinformatics

6 hours

Introduction to Bioinformatics- Biological information resources - Genome sequence acquisition and analysis - Retrieval of biological data - Data acquisition — databases - structure and annotation

Data mining and data characteristics. Module:6 **Bioinformatics tools** 6 hours NCBI - Human Genome Project – GenBank - Sequence alignment – BLAST – FASTA – CLUSTALW - Phylogenetic analyses. Methodology for Information Systems Module:7 6 hours Human-Computer interaction in health care - Costs and Benefits of information systems - Securityin medical information systems - Standards in Health care informatics and Telematics - Project management. Module:8 Contemporary issues: 2 hours **Total Lecture hours:** 45 hours Text Book Edward H. Shortliffe and James J. Cimino, "Biomedical Informatics: ComputerApplications in Health Care and Biomedicine (Health Informatics)", 2014, 4<sup>th</sup> edition, Springer, New York. Reference Book Rastogi, "Bioinformatics: Methods and Applications: Genomics, Proteomics and Drug Discovery", 2013, 1<sup>st</sup> edition, Prentice Hall, New Delhi. Mode of Evaluation: Continuous Assessment Test, Quiz, Digital Assignment, Final Assessment Test, Additional Learning (MOOC / Conference, Journal Publications / Make a thon / Project competition and more) Recommended by Board of Studies: 19-09-2019 Approved by Academic Council No. 56 Date 24-09-2019

| Pre-requisite      | ECE1018 – Signal Analysis and Processing | Version: 1.1 |   |   |   |   |

# **Course objectives (CoB):**

The course is aimed at

- 1. Acquainting students with the basic concepts of random variable and random process.
- 2. Introducing the basics of information theory and channel capacity
- 3. Using statistical hypothesis and estimation theory for parameter estimation.

# **Course Outcomes (CO):**

At the end of the course the student should be able to

- 1. Comprehend the basics probability and random variables understand.
- 2. Understand the two-dimensional random variables.
- 3. comprehend the different types of random processes like stationary, Gaussian random process etc.
- 4. Compute information measure and channel capacity
- 5. Compute response of correlator in receiver and matched filter.
- 6. Use the various statistical hypothesis testing methods including LR test, Mim-Max test, Neyman Pearson test.
- 7. Comprehend the different estimation theory including MMSE, MAP, ML and CRB estimators.
- 8. Solve the problems using modern engineering tools

Mode of Evaluation: Continues Assessment Test, Quiz, Digital Assignment, Challenging Experiments, Final Assessment Test

| That Abbedding Test   |             |
|---|-------------|
| List of Challenging Experiments(Indicative)   |             |
| Task I: Computation of Probability Mass (Density) Function (PMF or PDF)   | 3 hours     |
| 1. Generate 1000 sample points of real numbers uniformly distributed between '0'  |             |
| and '1'.  |             |
| i) Let X be random variable(RV) taking values '0' &'1'. X=0 corresponds to the  |             |
| sample points whose values are less than 0.5. X=1 corresponds to the sample points  |             |
| whose values are between 0.5 and 1. Draw the probability mass function of the RV,   |             |
| X.  |             |
| ii) Repeat part (i) for RV 'Y' taking values 0, 1&2.  |             |
| 0 : sample values between 0&1/3 1: sample values between 1/3&2/3  |             |
| 2: sample values between 2/3 & 1.   |             |
| Task II: Computation of PDF and cumulative distribution function (CDF)  | 4 hours     |
| 1. Draw the graph for the binomial density function for N=6 and p=0.4. Also   |             |
| compute and show it by graph, the binomial cumulative distribution function   |             |
| (CDF).  |             |
| Task III: Generation of Histogram of Uniform RV   | 3 hours     |
| 1. Generate 1000 sample points of real numbers uniformly distributed between 0  |             |
| & 1 using the Matlab function 'rand'. Compute the Histogram of the above  |             |
| sample points (Take 10 uniform steps between 0 & 1). Redraw the histogram   |             |
| when the sample points are increased to 2000. Also observe it when the steps  |             |
| are increased from 10 to 20. Compare your results with built in Matlab  |             |
| function.   | 4.1         |
| Task IV : Generation of Histogram of Gaussian RV  | 4 hours     |
| Redo the steps Task III with Matlab function 'rand' replaced by 'randn'.  |             |
| Write a Matlab script to compute the mean, mean square, variance and standard   |             |
| deviation for the RVs given and display them on the command prompt. Compare   |             |
| your results with the built in functions.   |             |
| Generate 1000 samples of a uniform RV taking values between 0 & $2\pi$ .<br>Generate the new RV, $Y = \sin \Theta$ . Plot the p.d.f of Y. Compare this with the |             |
| theoretical result.   |             |
|   | 4 h o xx ma |
| Task 5: Transformation of Uniform pdf to exponential and Rayleigh pdfs  | 4 hours     |
| Generate 1000 sample points of uniform p.d.f., Use appropriate transformation to  |             |
| convert uniform p.d.f to i) exponential p.d.f ii) Rayleigh p.d.f. Draw their  |             |
| Concrete 1000 complex of a 'Gaussian' random variable V. Use the transformation   |             |
| Generate 1000 samples of a 'Gaussian' random variable X. Use the transformation $Y = X$ 2. Draw the p.d.f of Y and compare it with theoretical results          |             |
| Task 6: Probability of error analysis   | 4 hours     |
| <u> </u>  |             |
| Task 7: Baseband Transmission and Reception schemes   | 4 hours     |
| Task 8: True parameter estimation schemes   | 4 hours     |
| Total Laboratory Hours: 30 hours  |             |

| Mode of Evaluation: Continuous and Final Assessment test |    |            |            |  |  |  |

| ECE2027       | EMC and EMI                                | 2            | 0 | 0  | 4 | 3 |
| Pre-requisite | ECE1017- Electro Magnetic Field Theory and | Version: 1.2 |   | .2 |   |   |
|               | Transmission Lines                         |              |   |    |   |   |

The course is aimed at

- 1. Imparting knowledge on the importance of EMC and EMC compliance.
- 2. Providing exposure to EMI sources, mitigation, and measurement techniques/standards to guarantee the correct working modalities.
- 3. Providing exposure to the guidelines for reduced EMI in PCB design.

# **Expected Course Outcome:**

At the end of the course the student should be able to

- 1. Understand the concepts related to EMI and EMC, and differentiate between conducted and radiated emission.
- 2. Differentiate the types of EMI coupling mechanisms
- 3. Apply a proper EMI control technique for a specific identified EMI problem.
- 4. Design an EMC model for PCBs
- 5. Describe about various Radiated EMI Measurements techniques and chambers.
- 6. Understand the standards for EMI and EMC

# Module:1 EMI/EMC Concepts

3 hours

EMI/EMC definitions – Units - Sources of EMI: Classification, Lightning, ESD, NEMP - Conducted and radiated emission - Conducted and radiated susceptibility – Intra and inter system EMI - In band interference - Spectrum conservation - Radiation hazard - Specific Absorption Rate (SAR).

# Module:2 EMI Coupling Principles

3 hours

Conductive coupling: Common-mode, Differential-mode - Inductive coupling - Capacitive coupling - Radiative coupling

# Module:3 EMI Control Techniques -I

5 hours

Grounding: Earthing principle, system grounding - Shielding: Shielding theory and shielding effectiveness, Shielding integrity at discontinuities, Conductive coatings, Cable shielding, Bonding: Shape and material for bond strap - general guidelines for good bonds.

# Module:4 EMI Control Techniques -II

5 hours

EMI Filters: Characteristics of filters, Impedance mismatch effects, Lumped element filters, Power line filter design, Common mode filter, Differential mode filter - EMI suppression devices and components: EMI suppression cables, EMC connectors, EMC gaskets, Isolation transformers, Transient and surge suppression devices.

# Module:5 EMC Design of PCBs

5 hours

RF Sources in PCB - SMD / through hole components, Pins, Basic loops, Differential vs Common mode - Board layout: Grounds and Power, ground bounce, Power distribution for two-layer boards, Power supply decoupling, Board zoning, Signal traces, Cross talk, Trace routing - Cables and connectors.

#### Module:6 EMI Measurements

4 hours

Radiated interference measurements: Open area test site measurement, anechoic chamber, TEM cell; Reverberating chamber - Conducted interference measurements: Characterization of conduction currents voltages, Conducted EM noise on power supply lines, Conducted EMI from equipment - Pulsed interference immunity: ESD/EFT, Electrical surge - Time domain EMI measurement

Module:7 EMC Standards

Military standards, IEEE/ ANSI Standards, CISPR/IEC, FCC standards, European Standards, VDE Standards, Other EMC Standards, Company Standards, EMC compliance for wireless devices, Radio Equipment Directive (RED).

| Module:8 | Contemporary issues: | 2 hours  |  |
|----------|----------------------|----------|--|
|          | Total Lecture hours: | 30 hours |  |

**Contemporary issues:** 

**Total Lecture hours:** 

Module:8

2 hours

#### Text Book(s)

**1.** Thomas A Runkler, Data Analytics: Models and Algorithms for Intelligent Data Analysis, Springer, 2012

#### **Reference Books**

- **1.** Montgomery, Douglas C., and George C. Runger. Applied Statistics and Probability for Engineers. John Wiley & Sons, 2010
- **2.** Kevin P. Murphy & Francis Bach, Machine Learning: A probabilistic perspective, MIT Press, 2012
- **3.** Trevor Hastie, Robert Tibshirani & Jerome Friedman, The Elements of Statistical Learning: Data Mining, Inference, and Prediction, Springer, 2017
- **4.** Shai Shalev-Shwartz, Shai Ben-David, Understanding Machine Learning: From Theory to Algorithms, Cambridge University Press, 2014

Mode of Evaluation :Continuous assessment test, Digital Assignment, Quiz and Final Assessment Test

# **List of Experiments (indicative)** 8 hours

Programming with Data analytic tools: WEKA, R Tool, python and SPSS

- 1. Using R for Introductory Statistics
- 2. Creating and customizing applications to analyse data.
- 3. Exploring the data and pre-processing the data using WEKA tool
- 4. Data Visualization
- 5. Apply Regression and different classification techniques for classifying the given data:
  - i) Linear regression, ii) Logistic regression, iii) Neural networks,
  - iv) SVM,
- v) Decision tree,
- vi) Naïve Bayes
- 6. Apply various clustering techniques to cluster the data:
  - i) K Nearest Neighbour, ii) K-Means
  - iii) Fuzzy C Means, iv) Self-organizing map
- 7. Apply various associative rule mining algorithms
- 8. Apply Deep learning for extracting complex patterns from big data.

Framework and application of ARIMA model- Build the model and make prediction in the future time points

Recommended by Board of Studies: 31/08/2018

Approved by Academic Council: 53<sup>rd</sup> Date: 13/12/2018

| <b>Course Code</b>   | Course Title                 | L      | T | P | J | C |

| ECE3002              | VLSI System Design           | 3      | 0 | 2 | 0 | 4 |
| <b>Prerequisite:</b> | ECE2003 Digital Logic Design | V: 1.1 |   |   |   |   |

- 1. To understand MOS device characteristics and to implement simple gates using CMOS logic style with delay and power constraints
- 2. To understand the CMOS fabrication process styles including layout design rules
- 3. To design combinational and sequential circuits using different logic styles
- 4. To use modern EDA tools to simulate and synthesize VLSI circuits

# **Expected Course Outcomes:**

- 1. Clear understanding of fundamental concepts of MOS transistors
- 2. Able to design simple logic gates using CMOS logic style
- 3. Able to calculate power and delay of simple CMOS circuits
- 4. Understand fabrication processes and their impact on the circuit performance
- 5. Able to design and validate combinational and sequential circuits using different logic styles
- 6. Able to design VLSI circuits at sub-system abstraction level
- 7. Able to use modern EDA tools to design VLSI circuits

# **Module:1 MOS Transistor Theory**

5 hours

I-V Characteristics, C-V Characteristics, Non ideal I-V effects of MOS Transistors

# Module:2 CMOS Logic

5 hours

Basic gates, Compound Gates, Transmission Gates based combinational and sequential logic design

# **Module:3** | CMOS Circuit characterization and Performance Estimation

8 hours

DC transfer Characteristics of CMOS inverter, Circuit characterization and performance estimation: Delay estimation, Logical effort and Transistor Sizing. Power Dissipation: Static & Dynamic Power Dissipation.

# **Module:4 CMOS Fabrication and Layout**

5 hours

CMOS Process Technology N-well, P-well process, Stick diagram for Boolean functions using Euler Theorem, Layout Design Rule

# **Module:5** | CMOS Combinational Circuit Design

7 hours

Static CMOS, Ratioed Logic, Cascode voltage Switch Logic, Dynamic circuits, Pass Transistor Circuits

# **Module:6** | CMOS Sequential Circuit Design

7 hours

Conventional CMOS Latches and Flip Flops, Pulsed Latches, Resettable and Enabled Latches and Flip Flops

# Module:7 | Sub System Design

6 hours

Single bit Adder, Carry look ahead adder, Carry propagate Adder, Magnitude Comparator, Barrel Shifter, Signed and unsigned multiplier.

- 1. To develop algorithms and techniques for analyzing and interpreting the real world scenarios.
- 2. To introduce the concepts related to multi-dimensional signal processing, feature extraction, pattern analysis.
- 3. To explore and contribute to research and further developments in the field of computer vision.
- 4. To investigate and develop object recognition algorithms supporting real-world scenarios.

#### **Course Outcomes:**

- 1. Able to understand digital image formation and low-level processing.
- 2. Able to perceive the diverse perspectives of digital imaging
- 3. Able to interpret, analyze and apply the different feature extraction methods.
- 4. Able to recognize various motion patterns, analyze and classify the same
- 5. Able to recognize and detect objects
- 6. Able to identify and recognize human faces
- 7. Able to identify and recognize instances

#### **Module:1** Introduction

7 hours

Introduction to computer vision, Image Formation – Digital Camera and optics –Light and color properties – Sampling and quantization - Enhancement Techniques – Spatial, frequency Domain.

# Module:2 | Morphology representation and segmentation

5 hours

Morphological operators, Boundary descriptor, Regional descriptors, Segmentation Thresholding techniques, Edge, Region based segmentation

#### **Module:3** | Feature detection and Matching

8 hours

Interest points and corners, Local image features, Model fitting, Detectors and Key point Descriptors, SIFT, RANSAC and transformations.

#### **Module:4** | Multiple views and motion

4 hours

Stereo introduction and camera calibration, epipolar geometry and structure from motion, Stereo correspondence and optical flow, Geometric alignment.

# **Module:5** | Supervised Recognition

6 hours

Patterns and pattern classes – template matching – Active appearance and 3D shape models Introduction to classification – Decision theoretic methods – Bayesian classifier- Support vector Machine-ANN

#### **Module:6** | Unsupervised Recognition

8 hours

Clustering techniques – K – Means algorithm – Hierarchical clustering- Cluster evaluation methods – similarity measures.

#### **Module:7** | **Applications**

5 hours

Data Base and Test Set, Object Detection, Pedestrian detection, Face recognition, Instance recognition, Medical diagnosis, Deep Learning concepts & Transfer learning: CV applications.

- 2. Marsland, Stephen. Machine learning: an algorithmic perspective. Chapman and Hall/CRC, 2014.
- 3. Anuradha Srinivasaraghavan and Vincy Joseph. Machine Learning, Wiley Publisher, 2019.

**Mode of evaluation**: Internal Assessment (CAT, Quizzes, Digital Assignments) & Final Assessment Test (FAT)

# **List of Challenging Experiments (Indicative)**

Software: Python, Numpy, Tensorflow, Keras, Pandas, OpenCV

Appropriate datasets from the following repository (suggestive) can be utilised

- 1. https://archive.ics.uci.edu/ml/datasets.html
- 2. <a href="http://sci2s.ugr.es/keel/datasets.php#sub1">http://sci2s.ugr.es/keel/datasets.php#sub1</a>

# **List of experiments:**

Algorithms to be practised include,

- 1. Linear & Multi-Linear Regression
- 2. Naive Bayes classifier
- 3. Decision trees
- 4. Logistic regression
- 5. Support Vector Machines Linear & Non-linear
- 6. Single & Multilayer Perceptrons
- 7. K-NN, K-Means & K-mode clustering
- 8. Random forest
- 9. Self Organizing maps

- 1. To understand the importance of Deep Learning
- 2. To get familiarized with deep feedforward neural networks
- 3. To get acquainted with diverse regularization strategies
- 4. To understand the role of optimization on deep learning models

#### **Course Outcomes:**

- 1. To analyze different learning techniques using regularization parameters
- 2. To build a deep feedforward network
- 3. To focus on regularization strategies for building deep models
- 4. To optimize the performance of deep learning
- 5. To analyze the impact of Convolution on simple neural networks
- 6. To process sequential data using recurrent neural networks
- 7. To apply deep learning algorithms for solving real-world engineering problems

# **Module:1** | Machine Learning Basics

4 hours

Review of Machine Learning techniques – Capacity, Overfitting & Underfitting Hyperparameters & Validation sets - Estimators, Bias and Variance - Supervised and Unsupervised learning algorithms, Stochastic Gradient Descent. Artificial Neural networks -Concepts.

# **Module:2** | Deep Feedforward Networks

6 hours

Learning XOR - Gradient Based learning - Hidden Units - Architecture Design - , Back propagation and other differentiation algorithms.

#### **Module:3** Regularization

9 hours

Norm penalties – Constrained & Under-constrained problems-Dataset augmentation- Early Stopping –Sparse representations-Ensemble methods – Dropout.

# **Module:4** | Optimization for training deep models

7 hours

Learning & Optimization - Challenges in Optimization - Basic algorithms - Algorithms with adaptive learning rate - Approximate Second-Order Methods, Optimization Strategies and Meta-Algorithms.

#### **Module:5** | Convolutional Neural Networks

7 hours

Convolution operation – Pooling – Efficient convolution algorithms

#### **Module:6** | Sequence Modelling

7 hours

Recurrent Neural Networks (RNN) – Bi-directional RNN – Long Short-term Memory (LSTM) -Gated Recurrent Unit (GRU) – Deep Recurrent Networks

#### **Module:7** | **Applications**

3 hours

Computer vision – Speech recognition – Natural Language Processing

| Pre-requisite | ECE4001: Digital Communication Systems | Syl | Syllabus version |   |   |   |  |
|               |  | 1.0 |                  |   |   |   |  |

- 1. To discuss technology developments in Optical Communication system.
- 2. To provide an in-depth knowledge on various types of fibers and their transmission characteristics, the construction, working principle and characteristics of transmitters, receivers and various optical amplifiers used in long distance communication.
- 3. To describe the concepts of Wavelength Division Multiplexing technique, components used and the estimation of rise-time and power budget for digital transmission system.
- 4. To introduce SONET/SDH, OTN and PON Technologies.

# **Expected Course Outcomes:**

- 1. Understand the concept of optical communication.
- 2. Select fiber and optoelectronic components to design, analyze an optical communication system and understand the basic concepts of optical transmitters, modulators and nonlinear effects.
- 3. Understand the concepts on photodetectors and receivers and various optical amplifiers.
- 4. Establish optical communication systems for multichannel systems using multiplexing techniques.
- 5. Understand the concepts of WDM system and their applications.
- 6. Understand and classify various types of optical Networks and their applications.
- 7. Design, analyze and evaluate optical communication systems.
- 8. Model and Simulate Optical Communication systems and networks.

Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar

# **Typical Projects**

- 1. Efficient Image compression technique by using modified SPIHT algorithm
- 2. Develop the compression algorithms by using Discrete Wavelet Transform
- 3. Compress and decompress an Image using Modified Huffman coding
- 4. Apply Run length coding and Huffman encoding algorithm to compress an image.
- 5. Adaptive Huffman coding of 2D DCT coefficients for Image compression
- 6. Compress of an image by chaotic map and Arithmetic coding
- 7. Region of Interest based lossless medical image compression
- 8. Write a code to build the (3, 1, 3) repetition encoder. Map the encoder output to BPSK symbols. Transmit the symbols through AWGN channel. Investigate the error correction capability of the (3, 1,
- 3) repetition code by comparing its BER performance to that without using error correction code.
- 9. Write a code to compare the BER performance and error correction capability of (3, 1, 3) and (5, 1,
- 5) repetition codes. Assume BPSK modulation and AWGN channel. Also compare the simulated results with the theoretical results.
- 10. Write a code to compare the performance of hard decision and soft decision Viterbi decoding algorithms. Assume BPSK modulation and AWGN channel.
- 11. Write a code to build (8, 4, 3) block encoder and decoder. Compare the BER performance of (8, 4, 3) block coder with (3,1,3) repetition codes. Assume BPSK modulation and AWGN channel.
- 12. Consider the following Extended vehicular A channel power delay profile. Write a code to model the given profile. Also measure the channel capacity. Compare the obtained capacity to that without fading channel.

| Delay (ns) | Power (dB) |
|------------|------------|
| 0          | 0          |
| 30         | -1.5       |
| 150        | -1.4       |
| 310        | -3.6       |
| 370        | -0.6       |
| 710        | -9.1       |
| 1090       | -7         |
| 1730       | -12        |

2510 -16.9

- 13. Performance analysis of various channels (BSC, BEC, Noiseless, Lossless) under AWGN.
- 14. FPGA implementation of linear block coding and syndrome decoding.
- 15. Performance of linear block codes under single error and burst error.
- 16 .Performance of analysis of convolution codes under single error and burst error
- 17. Implementation of VITERBI decoding in FPGA.
- 18. Efficiency checking of different interleaver for turbo encoder.
- 19. Implementation of trellis code modulator in FPGA.
- 20. Developing the Compression algorithms for Wireless multimedia sensor networks.

| Pre-requisite      | ECE4001 : Digital Communication Systems | Syllabus version |
|                    |   | 1.0              |

- 1. To familiarize the concepts related to cellular communication and its capacity.
- 2. To acquaint students with different generations of mobile networks.
- 3. To teach students the fundamentals of multipath fading and propagation models.
- 4. To describe the modulation and diversity schemes as applied in mobile communication.

# **Expected Course Outcomes:**

- Understand and solve telecommunication design issues using cellular and trunking theory.
- Interpret the functions of the building blocks of cellular network architecture. 2.
- Perform practical link budget analysis for next generation cellular networks. 3.
- Analyze the effect of multipath channels and suggest a suitable model for indoor or outdoor applications.
- 5. Demonstrate the implications of multipath parameters in mobile communication.
- Differentiate the digital modulation schemes available and select appropriate method to improve the performance of wireless communication.
- 7. Appraise a suitable diversity technique to combat the multipath fading effects.
- Design a wireless mobile communication system by formulating the apt techniques and selecting the supporting software/ hardware components.

# **Module:1** | Cellular Concept

6 hours

Cellular concept – Frequency reuse – Channel assignment strategies – Handoff strategies – Interference & system capacity - Trunking & grade of service - Improving coverage and capacity in cellular system.

#### **Module:2** | Cellular Networks

5 hours

GSM architecture - CDMA architecture - GPRS architecture - UMTS architecture

#### **Module:3** Introduction to Mobile Radio Propagation

5 hours

Free space propagation model – Three basic propagation mechanism – Reflection, diffraction and scattering – Two ray ground reflection model

# Module:4 | Mobile Radio Propagation: Large Scale Path Loss

6 hours

Link budget design using path loss model – Outdoor and indoor propagation models

# **Multipath**

Module:5 | Mobile Radio Propagation : Small Scale Fading and 6 hours

Small scale multipath propagation – Parameters of mobile multipath channels – Types of small scale fading – Fading effects due to multipath time delay spread and doppler spread – Rayleigh and Rician fading.

# **Module:6** | **Modulation Techniques for Mobile Radio**

9 hours

Overview of linear modulation techniques: QPSK, MSK, QAM - GMSK- OFDM and its principle,

transceiver implementation, cyclic prefix, inter carrier interference, windowing, PAPR and its reduction techniques. **Module:7** | **Diversity Techniques** 6 hours Diversity - Types of diversity - Diversity combining techniques: Selection, Feedback, Maximal Ratio Combining and Equal Gain Combining – Rake receiver **Contemporary issues** Module:8 2 hours **Total Lecture hours:** 45 hours Text Book(s) Rappaport, T.S., "Wireless communications", 2012 (Reprint), 2<sup>nd</sup> edition, Pearson Education, Noida, India. Education, Noida, India. Y. S. Cho, J. Kim, W.Y. Yang, C. G. Kang, "MIMO-OFDM Wireless Communications with Matlab", 2014 (Reprint), 1<sup>st</sup> edition, John Wiley & Sons, Singapore. Mode of Evaluation: Continuous Assessment Test –I (CAT-I), Continuous Assessment Test –II (CAT-II), Digital Assignments/ Quiz / Completion of MOOC, Final Assessment Test (FAT). **List of Challenging Experiments (Indicative)** To study the effect of various fading channels such as Rayleigh, Ricean and 3 hours various noise channel such as AWGN and Laplacian noise Simulate to compute the pathloss of urban, suburban and rural environment 3 hours for LTE/WiMAX/WLAN system using free space, Ericsson, COST 231, ECC, Hata and SUI model 3. Evaluate Signal to Interference Noise Ratio (SINR) distribution for the 6 hours following scenarios a. Effect of changing transmit power b. Effect of common vertical tilt of antennas c. Effect of changing percentage of users who are indoor and outdoor d. Different Terrains Simulate link level Bit Error Rate (BER) performance 4. 6 hours a. Link level BER Performance without FEC b. Link level BER Performance with various CQI indices c. Link level BER Performance with various transmission mode

| 5. | Study of relative interference levels in homogeneous networks     | 3 hours  |
|----|---|----------|
| 6. | Evaluate SINR distribution for heterogeneous scenarios with Picos | 5 hours  |
|    | a. Effect of Pico locations and number of Picos                   |          |
|    | b. Effect of power levels of Picos                                |          |
|    | c. Effect of Pico bias  |          |
| 7. | Study of CQI variation  | 4 hours  |
|    | a. CQI variations for different users                             |          |
|    | b. CQI variations in different sub bands                          |          |
|    | Total Laboratory hours  | 30 hours |

Mode of evaluation: Continuous Assessment of Challenging experiments / Final Assessment Test (FAT)

## **Typical Projects**

- 1. Energy-and cost-efficient mobile communication using multi-cell MIMO and relaying techniques
- 2. Inter-cell interference mitigation for mobile communication system
- 3. Improving capacity / resource allocation for soft handoff performance in wireless mobile communication
- 4. Security in mobile communication
- 5. Call admission and control schemes for QoS in cellular networks
- 6. Analysis of different traffic models in mobile communication
- 7. Dynamic channel assignment in wireless mobile communication
- 8. Performance analysis of macrocell / microcell hierarchical cellular systems
- 9. Performance analysis of propagation models
- 10. Performance analysis of modulation schemes

| Pre-requisite   ECE3030 - Principles of Computer Communications   Version : 1.2   |   |  |               |           |        |        |        |      |  |  |
| The course is aimed at  1. Introducing students with the basic concepts of M2M communication  2. Acquainting with M2M architecture, protocols and its security  3. Knowing the significance of M2M interfaces and services  Course Outcomes (CO):  At the end of the course the student should be able to  1. Get acquainted with the basics of M2M Communication  2. Understand the operation of M2M protocols and architecture  3. Possess an ability to optimize the M2M in public mobile networks  4. Know about IP in M2M  5. distinguish between different types of M2M security methods  6. Comprehend the operation and, characteristics of M2M terminals and interfaces  7. Familiarise with the basics of M2M services  8. Analyse the traffic models, routing protocols and different services using modern engineering tools.  Module:1 Introduction M2M 4 hours  What is M2M, Business of M2M, Accelerating M2M maturity, High level M2M framework, Policies, M2M Standards, M2M Value Chain, MVNO Led Model, Optimization in M2M Deployments.  Module:2 M2M Architecture and Protocols 4 hours  Use-Case driven approach in M2M architecture, ETSI-M2M work on use cases, Smart Metering Approach in ETSI M2M, Typical Smart Metering Deployment Scenario, Traffic models, M2M market applications  Module:3 M2M Optimization in Public Mobile Networks  M2M Over a Telecommunications Network, M2M Communication Scenarios, Data Connections for M2M Applications, 3GPP Standardization of Network Improvements for Machine Type  Communications, Numbering, Identifiers, and Addressing, Triggering Optimizations, Overload and Congestion Control  Module:4 IP in M2M 3 hours  Neighbor Discovery Protocol, IPv6 for M2M, 6LoWPAN: Framework, Header Compression, Routing Protocol for Low-Power and Lossy Networks (RPL), RPL Topology, CoRE, REST Architecture.  Module:5 M2M Security 5 hours  Security Characteristics of Cellular M2M, Security Requirements, Access Network Provider, M2M Service Provider perspectives, Approaches Against Hijacking, Public Key Solutions, Smart card based onlyting | ECE4026   | M2M COMMUNICATIONS                                   |               | 2         | 0      | 0      | 4      | 3    |  |  |
| The course is aimed at  1. Introducing students with the basic concepts of M2M communication  2. Acquainting with M2M architecture, protocols and its security  3. Knowing the significance of M2M interfaces and services  Course Outcomes (CO):  At the end of the course the student should be able to  1. G et acquainted with the basics of M2M Communication  2. Understand the operation of M2M protocols and architecture  3. Possess an ability to optimize the M2M in public mobile networks  4. Know about IP in M2M  5. distinguish between different types of M2M security methods  6. Comprehend the operation and, characteristics of M2M terminals and interfaces  7. Familiarise with the basics of M2M services  8. Analyse the traffic models, routing protocols and different services using modern engineering tools.  Module:1 Introduction M2M 4 hours  What is M2M, Business of M2M, Accelerating M2M maturity, High level M2M framework, Policies, M2M Standards, M2M Value Chain, MVNO Led Model, Optimization in M2M Deployments.  Module:2 M2M Architecture and Protocols 4 hours  Use-Case driven approach in M2M architecture, ETSI-M2M work on use cases, Smart Metering Approach in ETSI M2M, Typical Smart Metering Deployment Scenario, Traffic models, M2M market applications  M2M Applications, Numbering, Identifiers, and Addressing, Triggering Optimizations, Overload and Congestion Control  Module:4 IP in M2M Sibon Scenario, Data Connections for M2M Applications, Judentifiers, and Addressing, Triggering Optimizations, Overload and Congestion Cortrol  Module:4 IP in M2M Sibon Scenario, Scenarios, Data Connections for M2M Applications, Judentifiers, and Addressing, Triggering Optimizations, Overload and Congestion Cortrol  Module:4 IP in M2M Sibon Scenario, Scenario, Scenarios, Data Connections for M2M Applications, Authorited Ray Scenario, Scenarios, Scenarios, Overload and Congestion Cortrol  Module:5 M2M Security Scenarios, Repl., RPL Topology, CoRE, REST Architecture.  Module:5 M2M Security Security Requirements, Access Network Provider, | Pre-requisite   | ECE3030 - Principles of Computer Commu               | inications    | Vei       | rsion  | : 1.2  | 1      | - L  |  |  |
| 1. Introducing students with the basic concepts of M2M communication 2. Acquainting with M2M architecture, protocols and its security 3. Knowing the significance of M2M interfaces and services  Course Outcomes (CO):  At the end of the course the student should be able to 1. G et acquainted with the basics of M2M Communication 2. Understand the operation of M2M protocols and architecture 3. Possess an ability to optimize the M2M in public mobile networks 4. Know about IP in M2M 5. distinguish between different types of M2M security methods 6. Comprehend the operation and, characteristics of M2M terminals and interfaces 7. #### **Course Objectives:**

- 1. To understand the web architecture and web languages.
- 2. To program for web client and web server objects.
- 3. To understand web development environment and methodology

## **Expected Course Outcome:**

- 1. Implement interactive and responsive web pages using HTML and CSS.
- 2. Use Java script language to transfer data and add interactive components to web pages.
- 3. Develop a sophisticated web application that appropriately employs the MVC architecture
- 4. Demonstrate a client server application using HTTP protocol and access web services for dynamic content using AJAX.
- 5. Exhibit the working of server-side scripts.
- 6. Understand the fundamental working of data using open source databases
- 7. Develop advanced web frameworks by combining multiple web technologies
- 8. Implement Client side and Server side programming.

Evolution of Web – Web architecture – HTML –XHTML- CSS

## Module:2 | Client-Side Scripting | 5 hours

Javascript Basics – Arrays- Functions - Javascript objects – HTML DOM - DOM methods – Events-Regular Expressions – Form Validation-JSON-Jquery

#### Module:3 | Web Applications | 5 hours

Web applications- Web Application Frameworks-MVC framework-Angular JS – Single Page Applications-Responsive Web Design

#### Module:4 | Client/Server Communication | 4 hours

HTTP- Request/Response Model- HTTP Methods- RESTful APIs-AJAX-AJAX with JSON

#### Module:5 | Web Servers | 5 hours

Node.js-NPM- Callbacks -Events- Express framework-Cookies-Sessions-Scaling

#### Module:6 Storage 3 hours

MongoDB-Manipulating and Accessing MongoDB Documents from Node is

#### Module:7 | Reactive frameworks | 2 hours

Meteor JS framework – Templates – Events – Sessions – Publish & Subscribe – Accounts

# Module:8 | Contemporary issues: | 2 hours

# **List of Challenging Experiments (Indicative)**

- . Use DHTML to perform the following.
  - a) Design the spotlight section of VIT home page. Use Box properties of CSS.

Click here for Details

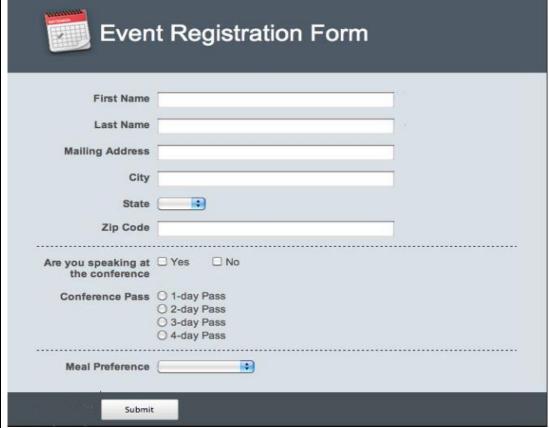

- b) To create a web page which includes a map and display the related information when a hot spot is clicked in the map
- c) Create a web page which displays an image "ganesha.jpg" and the text "This is image of Lord Ganesh". Place three buttons in the web page which performs the following on clicking them
  - To right align the image.
  - To change the height, width and border of the image to 250, 350 and 3 pixels respectively
  - To change the source and alternate text of the image to "vinayaga.jpg" and "The image cannot be loaded" respectively.
    - 1. Design a web page with image gallery and sliding menu for movie reviews
- 2. Design the following using JavaScript and DOM
  - a) Given an array of words, write a javascript code to count the number of vowels and number of consonants in each word. Use Regular Expressions.
  - b) Include Image Slide Show Digital clock, Survey Poll to make your webpage
    - i) Dynamic.

Develop a web application to implement online quiz system. The application includes only client side script

- 3. Create a popup Login form using jQuery which appears at the center of screen on loading the page after a specified time interval. Include Captcha text in the login page.
- 4. a) Validate the Event Registration Form given below using Jquery for the following conditions.

- All fields are mandatory
- Zip code should be exactly five digits
- Email validation

- b) Create a JSON file for a list of cities. Provide autocomplete option for city field using the JSON file as source.
- 5. Using Angular JS, add names that are entered in textbox to the list and clear the textbox once the name is added to list.
  - Meenal
  - Palak
  - Andrea

Parul add

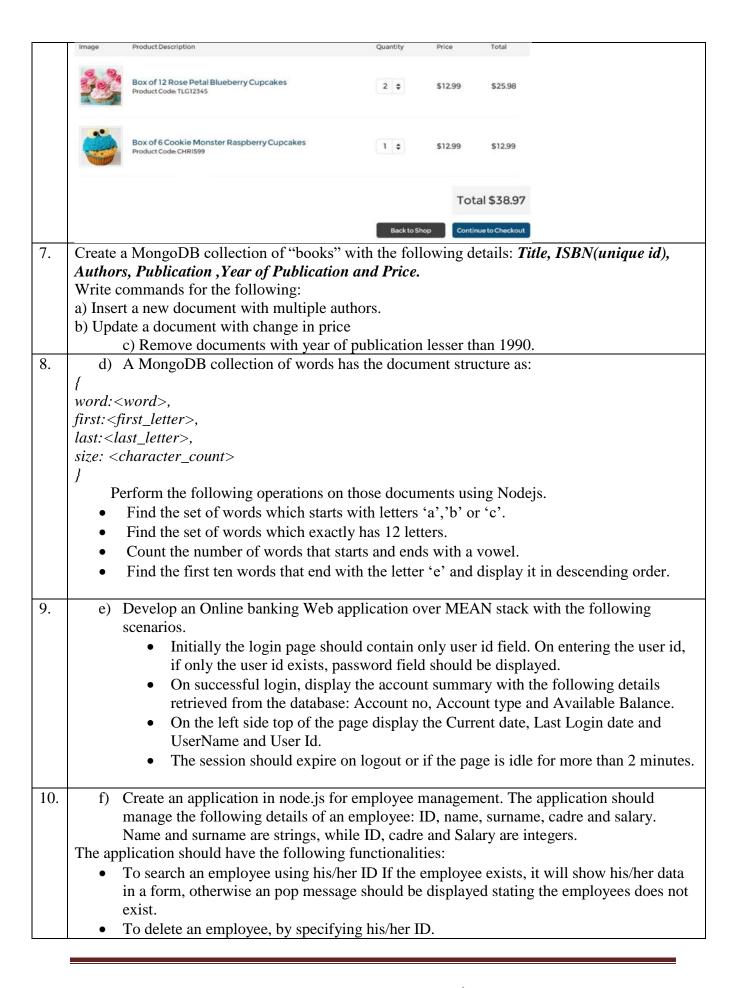

- Meenal
- Palak
- Andrea
- Parul

Design a shopping cart application using AngularJS. Your shopping webpage should have the provisions for selecting the list of items from different category, Once the items are selected on clicking the submit button the items in the cart with its price should be displayed. Sample design

add

is given below.

6.

- To insert a new employee using a form. By default, the form is hidden, by pressing a button the form should appear. If the same button is clicked the form should disappear. Every time the form is shown, it should be empty. The form should allow to specify all data of an employee. If the ID field is left empty, the system will assign the next available ID. If the ID is already associated to an employee, the employee data are overwritten. If the ID is not associated to any employee, the employee is created. All the other fields cannot be empty.
- 11. Design an online book store using ExpressJS which has the following features (use the MongoDB database created in Question.No.9):
  - a) Search option based on Title, Author or ISBN
  - b) On retrieving the results, display the book details in table format with the Price field in sorted order using AngularJS
- 12. Design a student registration form which takes student name, register number, DOB, program, email id, temporary address, permanent address, phone number. Validate the following using jquery: a. Mobile number should be exactly 10 digits b. Register number should have alphabets and numbers only c. Name should not exceed 30 characters and can be only alphabets. d. Email validation e. Provide a checkbox saying "Permanent address is same as temporary address". If checked, the value of permanent address should be added automatically from temp address. And should be in disabled mode.

### **Course Objectives**

The aim of this course is to

- 1. Cover certain basic, important computer oriented numerical methods for analysing problems that arise in engineering and physical sciences.
- 2. Use MATLAB as the primary computer language to obtain solutions to a few problems that arise in their respective engineering courses.
- 3. impart skills to analyse problems connected with data analysis,
- 4.solve ordinary and partial differential equations numerically

#### **Expected Course Outcomes**

At the end of the course the student should be able to

- 1. Observe the difference between exact solution and approximate solution.
- 2. Use the numerical techniques to find the solution of algebraic equations and system of equations.
- 3. Fit the data using interpolation technique and spline methods.
- 4. Find the solution of ordinary differential equations, Heat and Wave equation numerically.
- 5. Apply calculus of variation techniques to extremize the functional and also find approximate series solution to ordinary differential equations

#### **Module:1** | Algebraic and Transcendental Equations 5 hours

General iterative method- rates of convergence- Secant method - Newton - Raphson method-System of non-linear equations by Newton's method.

#### Module:2 **System of Linear Equations and Eigen Value** 6 hours **Problems**

Gauss –Seidel iteration method. Convergence analysis of iterative methods-LU Decomposition -Tri diagonal system of equations-Thomas algorithm- Eigen values of a matrix by Power and Jacobi methods.

#### Module:3 | Interpolation

6 hours

Finite difference operators- Newton's forward-Newton's Backward- Central differences-Stirling's interpolation - Lagrange's interpolation - Inverse Interpolation-Newton's divided difference-Interpolation with cubic splines.

#### **Module:4** | Numerical Differentiation and Integration 6 hours

Numerical differentiation with interpolation polynomials-maxima and minima for tabulated values-Trapezoidal rule, Simpsons 1/3<sup>rd</sup> and 3/8<sup>th</sup> rules. –Romberg's method. Two and Three point Gaussian quadrature formula.

| Module:5 | Numerical Solution of Ordinary Differential | 8 hours |
|----------|---|---------|
|          | Equations                                   |         |

First and second order differential equations - Fourth order Runge - Kutta method. Adams-Bashforth-Moulton predictor-corrector methods. Finite difference solution for the second order ordinary differential equations.

# Module:6 Numerical Solution of Partial Differential Equations 6 hours

Classification of second order linear partial differential equations-Laplace equation —Gauss-Seidal method-One dimensional heat equation—Schmidt explicit method-Crank-Nicolson implicit method. One dimensional wave equation—Explicit method.

# Module:7 Variational Methods

Introduction - functional –variational problems- extremals of functional of a single dependent variable and its first derivative- functional involving higher order derivatives- Isoperimetric problems-Galerkins- Rayleigh Ritz methods.

6 hours

| Module:8                | Contemporary Issues                           | 2 hours  |  |  |
|-------------------------|---|----------|--|--|
| Industry Expert Lecture |   |          |  |  |
|                         |   |          |  |  |
|                         | Total Lecture hours:                          | 45 hours |  |  |
| Tutorial                | A minimum of 10 problems to be worked         | 30 hours |  |  |
|                         | out by students in every Tutorial Class.      |          |  |  |
|                         | • Another 5 problems per Tutorial Class to be |          |  |  |
|                         | given for practise.                           |          |  |  |
