Workshop Overview

Memory Studies is inherently interdisciplinary as memory cannot be understood solely through one academic lens. Psychology may examine individual and cognitive memory, while history investigates the ways societies remember and interpret the past. Literature and cultural studies explore how memories are represented through narratives, poetry, films, and other artistic forms. Sociology and anthropology examine collective, cultural, and social memory, while media and digital studies investigate how technology influences the preservation and circulation of memories.

The workshop aims to provide a platform for participants to engage with faculty from various disciplines, eminent scholars, refine their perspectives on memory studies, and discuss contemporary literary and cultural theories. Memory Studies examines how memory is transmitted across individuals and societies draws on disciplines such as literature, psychology, sociology, history, cultural studies, engineering and commerce to offer diverse perspectives that deepen our understanding of memory. Through interactive sessions, hands-on activities, and engaging discussions, participants will enhance their analytical skills and gain insights into advanced research techniques.

Objectives of the Workshop

- To introduce interdisciplinary research roads in Memory Studies.
- To explore interdisciplinary approaches in neuroscience and English Studies.
- To explore decoding anxiety in contemporary cultures of health.
- To facilitate interactive sessions on mysterious, mischievous, and memory machine
- To provide insights on Memory Studies and post-colonial writing.
